This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

PANHARD OIL

The cars you sell. The cars you repair.

Do you want them to make good? It means prestige for you if they do. If so, you must *know* that they are perfectly lubricated. Don't guess at it. Read this, from a dealer who has sold Panhard Oil exclusively for years:—

George A. Haws, New York City.

It may interest you to know that I guaranteed each Rambler car that I sold during 1912, free of repair for one year. I insisted on the use of Panhard Oil.

It cost me less than $5 to make good this guarantee on four cars, with a mileage of 4200 to 7600 each. This fall I took down the four engines, and got less than a small whiskey glass full of carbon from the *sixteen* cylinders after that mileage. *No bearing trouble whatever.*

Panhard Oil will do this for **you.** Talk is cheap, but test Panhard and see for yourself. Write for our proposition. We have many sales helps and many distributing stations, throughout the country.

GEORGE A. HAWS, 148 FRONT STREET, NEW YORK CITY.

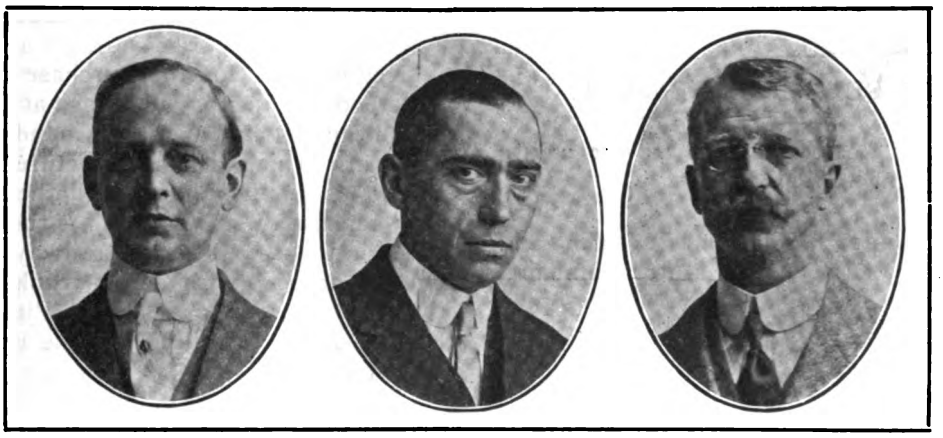
BRITISH ENGINEERS VISIT AMERICA.

Event of Decided Importance to Automobile Industry of Both Countries—Guests Being Entertained with Elaborate Programme During Stay of Three Weeks.

AN EVENT that is of decided importance to the automobile industry in this country and in Great Britain is the visit of about 30 members of the Institution of Automobile Engineers and the Society of Motor Manufacturers & Traders of Great Britain as the guests of the American Society of Automobile Engineers. The party reached New York City on the Minnewaska Monday, May 26.

A tour of inspection of the various automobile factories and allied industries, and the midsummer meeting of the American society, in which the British engineers will participate, will occupy the succeeding three weeks. The trip was planned as a return visit for that which was enjoyed by the members of the Society of Automobile Engineers while abroad in November and December, 1911.



Members of American Committee of Arrangements: Left to Right, A. B. Cumner, Chairman; Allen L. McMurtry and Robert McA. Lloyd.

The arrangements for the entertainment of the visitors is most elaborate and complete and there is scarcely an idle moment from the time of arrival until the close of the official tour, June 14. The committee of arrangements which has charge of events, includes A. B. Cumner, chairman; Allen L. McMurtry and Robert McA. Lloyd, who are shown in an accompanying illustration, assisted by General Manager Coker F. Clarkson. The members of the visiting party include the following:

Institution of Automobile Engineers—President T. B. Browne, London; Secretary Basil H. Joy, London; Councillors T. C. Pullinger, Paisley, and Charles Wheeler, London; F. S. Bennett, H. Massac Buist, F. E. Filer, London; Carl F. Benson, T. A. Mackle, Lucien Bollack, Coventry; C. A. Branston, Cambridge; T. Clarkson, Chelmsford; J. B. Ferguson, Belfast; J. Inglis Ker, Glasgow; J. A. Prestwich, Tottenham; R. W. Smith, Redditch; E. B. Wood, E. Wooler, Bristol.

Society of Motor Manufacturers & Traders—J. B. Dunlop, Dublin; C. Gilbert Moore, Twickenham; Tom Norton, Llandrindod Wells; E. C. Paskell, Birmingham.

Relatives—Mrs. T. B. Browne, London; Mrs. T. Clarkson, Chelmsford; Mrs. T. C. Pullinger, Paisley; Mrs. E. B. Wood, Bristol; Mr. Smith, Jr., Redditch.

After a tour of New York City, the guests will go to Pittsburg, where they will visit the Carnegie-Homestead Steel Works, and inspect the plant of the National Tube Company at McKeesport, Penn. At Indianapolis, Ind., they will attend the 500-mile international sweepstakes, May 30, and the following day will inspect the Wheeler & Schebler and Prest-O-Lite plants. The arrival at Detroit will be June 1 and the next day will be spent in going through plants of the Ford Motor Company and the Cadillac Motor Car Company. The Packard Motor Car Company's plant will be inspected the following morning and in the afternoon a visit will be made to the factory of the Timken-Detroit Axle Company.

The Hudson Motor Car Company, the Continental Motor Manufacturing Company and the

Digitized by Google

Chalmers Motor Company will all be visited in turn, after which on the afternoon of June 4 the party will embark on the steamer City of Detroit III for the three-day midsummer outing and meeting of the S. A. E. After leaving Detroit the engineers will visit in turn Cleveland, O.; Buffalo, N. Y.; Providence, R. I.; Bridgeport, New Haven and Hartford, Conn., after which the return will be made to New York. The plants of the Peerless Motor Car Company, Winton Motor Car Company and the White company will be visited at Cleveland; the Goodyear Tire & Rubber Company at Akron, O.; Pierce-Arrow Motor Car Company at Buffalo; Brown & Sharpe Manufacturing Company at Providence; Potter & Johnson Company at Pawtucket; Locomobile Company of America and Spring Perch Company, Bridgeport; New Haven Carriage Company, New Haven; Pratt & Whitney, Pope Manufacturing Company and Hartford Rubber Works at Hartford.

ERECTING LARGE ADDITION.

Rauch & Lang Carriage Company to Increase Plant for Production of Electrics.

The Rauch & Lang Carriage Company, Cleveland, O., maker of the Rauch & Lang electric automobile, has broken ground for a four-story building at West Twenty-sixth street and Chatham avenue. The new structure will have a frontage of 199 feet on West Twenty-sixth street and 112 feet on Chatham avenue. It will be of brick and steel and will have an unusual amount of light, the walls being largely a framework for the windows.

GILBERT SUCCEEDS JEWETT.

Latter Retires as Lozier Head to Devote Entire Time to Paige Cars.

Joseph M. Gilbert has become president and general manager of the Lozier Motor Company, Detroit, maker of Lozier cars, having resigned the general management of the United States Tire Company to engage directly in the manufacture of the automobile. At the election of new officers of the Lozier company held at Detroit, Mr. Gilbert was chosen to succeed Harry M. Jewett of Detroit, who for some months has been president of the company, making a considerable sacrifice of time and business interests to act in that capacity until the contemplated reorganization could be carried into effect.

TO CROSS THE CONTINENT.

Maker of Haney Fire Apparatus to Remove from California to Florida.

The Haney Fire Fighting Apparatus Company, Stockton, Cal., through its president, Edward H. Haney, and its general manager, Edward Olds, announces that it will move to Tampa, Fla., where it will manufacture fire fighting apparatus and motor trucks. The company, which is incorporated for $2,000,000, is said to have purchased 31 acres of land southwest of Tampa and has contracted to build a plant at a cost of $50,000.

GARAGE OWNERS ORGANIZE.

Massachusetts Concerns Form Association to Benefit Conditions.

The Massachusetts Garage Association, Inc., was formed in Boston, May 1, the object being to place the garage owners of the state on a much higher plane than they have occupied heretofore. It also is expected that the organization will aid greatly in impressing the automobile owner that by dealing with a member he will be safeguarded against overcharge for service rendered or supplies furnished. Any garage owner in the state, who is vouched for by a member of the association, is eligible to membership.

Officers and directors have been elected:

President, J. S. Hathaway, White Company, Boston; vice president, J. E. Savell, Motor Car Service Company, Boston; secretary-treasurer, Chester I. Campbell, Boston; directors, V. A. Charles, Inter-State Automobile Company, Boston; F. W. Boynton, Hyde Park Auto Station, Hyde Park; John F. Fleming, Brookline Garage, Brookline; J. S. Hathaway; C. E. Harris, Harris Garage Company, Easthampton; J. W. Robertson, Robertson Motor Car Company, Taunton; R. H. Hartley, Church Street Corporation, Lowell, and J. E. Savell.

SELECTS CLEVELAND SITE.

Plans Completed for Location of Chandler Plant on New Belt Line Property.

Negotiations for the purchase of a site and the erection of factory buildings at Cleveland, O., have been concluded by the Chandler Motor Car Company, which will manufacture the Chandler car. The ground upon which the plant will be built consists of six acres and is the first to be located on the new Belt Line railway, a $20,000,000 line connecting with seven trunk railroads, as follows: Lake Shore, Nickel Plate, Big Four, Erie, B. & O., Wheeling & Lake Erie and Pennsylvania.

EMPLOYEES SHARE PROFITS.

Studebaker Corporation Adopts Plan Which Permits Them to Become Shareholders.

Operating large plants at Detroit, Mich.. and South Bend, Ind., the Studebaker Corporation, maker of Studebaker pleasure cars and trucks, has put into effect a plan whereby certain of its employees may become stockholders and share in the profits of the concern. The plan, which was adopted at a meeting of the board of directors, is ample. It provides, after dividends shall have been earned on the common and preferred stock, that a fund shall be set apart for the pur-

Digitized by Google

chase, at market prices, of common stock of the corporation to be held in trust for three-year periods and then distributed with its earnings among participating employees.

TO PRODUCE MOTOR TRUCK.

Los Angeles Concern Organized to Manufacture Worm Driven Vehicle of New Design.

The Los Angeles Motor Truck Manufacturing Company, Los Angeles, Cal., has been formed to build a new type of motor truck, with underslung chassis, with a low centre of gravity and loading platform 21 inches above the ground, but having 11 inches road clearance. The concern has purchased a 30-acre tract of land at Bangle Station, near Wilmington, Cal., at Los Angeles harbor. Plans are being drawn for five large, reinforced concrete buildings, which will cost, together with machinery, materials, etc., over $300,000. About 250 men will be employed at the plant.

SPRING WHEEL CONCERN.

Invention of Chicago Man to Be Produced by New Company in South Bend, Ind.

A corporation composed of capitalists of South Bend, Ind., to be known as the South Bend Spring Wheel Company, is in process of formation to manufacture a new automobile wheel, in which the spokes are displaced by springs. The rights to the invention, which is by E. A. Nelson of Chicago, have been secured by the South Bend men.

ERECTING NEW BUILDINGS.

Motor Foundry Company Increases Capital to Meet Demands of Enlarged Business.

Stockholders of the Motor Foundry Company, Detroit, at the annual meeting, gave approval to the plan for increasing the company's capital from $35,000 to $100,000 to provide funds for extensions of the plant necessitated by enlarged business. The additional capital has been fully paid in and work has begun on the erection of new buildings adjoining the present plant, which covers 2.5 acres on Hart avenue.

GEDDES SUCCEEDS KELLY.

President of Kelly-Springfield Motor Truck Company Retires on Account of Ill Health.

The many friends of E. S. Kelly, president of the Kelly-Springfield Motor Truck Company, Springfield, O., maker of Kelly trucks, will regret to learn that his health is such that he has felt compelled to retire from the active detailed management of the company. Mr. Kelly becomes chairman of the board of directors and will continue to exercise a general oversight over the affairs of the concern, but the details of the management will devolve upon James L. Geddes, who succeeds Mr. Kelly as president. He will be assisted by O. S. Kelly, who continues to be general manager.

TO PRODUCE MOTOR HEARSES.

Understood That Grand Rapids Concern Will Engage in New Line of Activity.

According to information from Grand Rapids, Mich., the Michigan Hearse & Carriage Company of that city will enter the automobile field, producing motor hearses, principally, and motor trucks. It has long been engaged in the manufacture of funeral cars, undertaker's wagons, ambulances, etc.

LEAVES INTERNATIONAL MOTOR.

R. W. Hutchinson, Jr., Well Known Motor Truck Writer, Resigns.

Rollin W. Hutchinson, Jr., advertising manager of the International Motor Company, New York City, maker of Mack, Saurer and Hewitt trucks, has resigned his position, to take effect June 1. His future plans are not yet announced. Mr. Hutchinson has had charge of the advertising and publicity of the International company and its predecessor, the Saurer Motor Company, since their establishment, and has acquired a unique reputation among motor writers for his broad and comprehensive knowledge of motor truck subjects and the attitude of business interests toward them.

MARKET OF THE FUTURE.

Cartercar Official Foresees Ever Increasing Demand for Product of the Industry.

America is able to afford more automobiles today than ever before, according to Harry R. Radford, vice president and general manager of the Cartercar Company, Pontiac, Mich., maker of the Cartercar line. He says that the ever increasing prosperity of the country will take care of all the really good cars that can be manufactured at a reasonable cost. He adds:

If this country were the same financially and industrially today that it was some 10 or 15 years ago, there might be some excuse for the assumption that the market might be slackening a bit. But everywhere there is a great boom, and people are buying motor cars today who would not have thought of such a thing only a few years ago.

And another great thing is the improvement in roads and streets that is going on in all parts of the country. Of course these improvements help in the selling of cars, but they must and will be used almost universally whether there are any roads or not. Almost every day we get letters from Cartercar owners telling of the successful use of their machines even on roads which seemingly are impassable for a horse drawn vehicle.

When the first motor car was made the people were not ready for it and they had to learn what it would do and to get used to it. Today they recognize it as one of the important essentials of industry and pleasant living. Automobiles will be sold as long as people continue to live and make money.

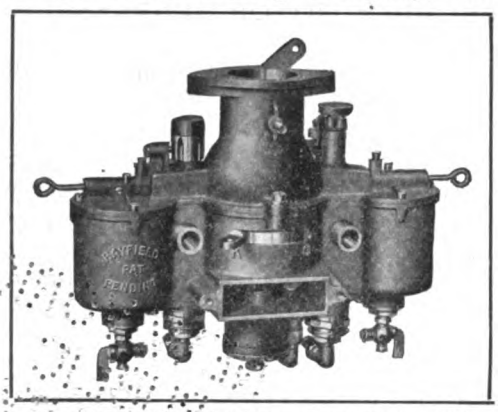
NEW RAYFIELD CARBURETOR.

Combination Vaporizer Utilizing Gasoline or Kerosene Independently.

Announcement is made by the Findeisen & Kropf Manufacturing Company, Chicago, of a new combination Rayfield carburetor. It is the invention of Chas. Rayfield, who also designed the conventional Rayfield carburetor, and is for use on traction, stationary and marine engines, although it is understood that the inventor is conducting a series of experiments with a similar instrument applicable to automobile motors.



Rayfield Combination Kerosene and Gasoline Carburetor.

The operation of the new carburetor is automatic, and it is held that a perfect mixture is supplied to the cylinders at all speeds and under varying loads when using kerosene, distillate or other low grade fuels. Water is automatically fed with the kerosene.

As will be noted by the accompanying illustration, two float chambers are employed. The shifting of a small lever by the operator shuts off the supply of gasoline and opens the kerosene port, instantly changing the mixture from one fuel to the other. Two separate adjustments are provided. The required heat for vaporization is obtained from the exhaust manifold, a pipe connecting the latter to the air intake of the kerosene member.

BOSCH SPARK PLUG HOOD.

Simple and Easily Attached Device for Preventing Short Circuits, Due to Moisture, Etc.

The tendency of a high-tension current to stray from its intended path is augmented when terminals, such as those of the spark plug for example, are exposed to dampness or moisture. Water is a well known conductor of electricity and during heavy rain storms the spark plugs are subjected to moisture unless the hood of the motor is water tight. To prevent short circuits and to protect the plug as well, the Bosch Magneto Company, New York City, has perfected and is marketing a hood which is easily and quickly attached or removed, and without interfering with the usual plug.

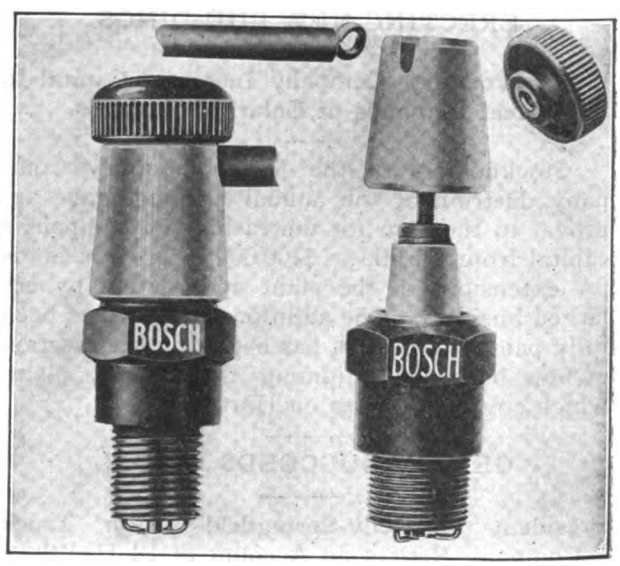
The spark plug hood is shown in an accompanying illustration and comprises but three parts, the hood, asbestos washer and an insulated terminal thumb cap. To apply it the usual plug terminal is removed and the asbestos ring pressed into the groove at the base of the hood, after which the latter is slipped over the regular plug. The cable is then set in the recess of the hood with its terminal over that of the electrode or central pin of the plug. The insulated thumb cap is next screwed in place, it not only serving to retain the parts, but its large inside diameter bearing against the insulation of the cable, expanding it sufficiently to seal the opening. The hood is of steatite.

The construction of the hood is such that the parts carrying the high-tension current to the gap of the plug or ground side of the shell, are insulated, and it would be possible to obtain perfect ignition even if the hood were subjected to a stream of water. A feature of the device is that the cable may be detached with the motor operating, and without danger of shocks, by removing the thumb cap. The hood may be displaced and reassembled by the fingers and locking as it does the connections, makes for convenience. It is made in all sizes for Bosch plugs, including those for motorcycles.

TARRYTOWN COMPANY FORMED.

A. R. Gormully Heads Concern Engaged in Producing Parcel Delivery Wagons.

Papers have been filed at Albany, N. Y., incorporating the Tarrytown Motor Car Company, a $250,000 concern organized for the purpose of building light commercial automobiles. The new company will be headed by A. R. Gormully, recently of the United States Motor Company, as president. Wallace Odell of Tarrytown, N. Y., a new comer in the industry, is named as vice president and treasurer, and B. J. Knerr, auditor of the United States Motor Company, is secretary.



Bosch Spark Plug Hood, a Practical and Simple Construction for Completely Insulating High-Tension Current Carrying Parts of Spark Plug.

TRADE INFORMATION EXCHANGE BUSINESS PROPOSITIONS.

Opportunities Are Offered Below for Agents to Secure New Lines, for Manufacturers to Extend Their Representation, and for Producers to Get in Touch with Those Who Are in the Market for Equipment and Supplies. All Are Opportunities for Live Men and Firms Seeking Profitable Relations.

The Following Details of Trade Opportunities Presented by Members of the Trade Information Exchange Are Published Without Names, Those Interested Desiring the Negotiations to Be Strictly Confidential. Replies Should Be Addressed by the Number Given and Sent to the Exchange with Postage for forwarding.

CAR AGENCIES DESIRED.

4683—Michigan Concerns, recently merged, are in the market for pleasure cars listing between $800 and $2500, and motor trucks selling from $800 to $1800.

5008—Illinois Company, recently formed, is desirous of taking the agency for pleasure cars selling between $1000 and $2200 and motor trucks listing from $1000 to $2500.

7854—Missouri Firm, strongly established, is interested in securing the agencies for pleasure cars and trucks selling at all prices.

3719—New Jersey Company is seeking a line of commercial vehicles selling from $800 to $3000; also will take agency for motor fire fighting apparatus selling up to $10,000.

1130—Illinois Firm, conducting automobile agency, supply and garage business, is interested in agencies for pleasure cars selling up to $3500, and motor trucks listing from a low figure to $2000.

4966—Pennsylvania House, recently established with good line of cars, is desirous of adding a good pleasure vehicle selling between $1425 and $1850.

ACCESSORY AGENCIES.

9664—New York State Firm, occupying new, modern garage, desires agencies for all kinds of accessories and supplies for commercial and pleasure vehicles.

3019—Iowa Concern is interested in automobile and repair shop supplies and accessories.

2679—Tennessee Company, recently formed, is seeking agencies for all lines of accessories for pleasure and commercial vehicles; also garage and repair shop supplies.

9768—New York State House, with modern supply store, is interested in a general line of automobile accessories and supplies and garage and repair shop supplies.

8160—Georgia Firm, doing substantial business, is desirous of taking agency for automobile accessories and supplies.

2268—Michigan Company, under new management, is interested in new lines of automobile accessories and supplies and repair shop supplies.

6764—Kentucky Concern, in new establishment, will accept agencies for accessories for pleasure and commercial vehicles, also garage supplies.

7465—Indiana House, under progressive management, is interested in all kinds of accessories and supplies for automobiles and trucks and supplies for repair shop and garage.

6965—Minnesota House, would like agency for automobile accessories and supplies.

7306—Massachusetts Company is interested in all kinds of accessories and supplies for garage, repair shop, automobiles and trucks.

3191—New Jersey Concern, doing good business, is in the market for accessories of all kinds for automobiles, trucks, garage and repair shop, including machine tools.

2619—California Firm, in new plant, is interested in automobile accessories and garage and automobile supplies.

4078—New York Concern, doing good business, would take agency for accessories and supplies for pleasure and commercial vehicles and for repair shop supplies.

3961—Colorado Firm, with new place of business, is in the market for automobile accessories and supplies and garage supplies.

4266—Missouri House, handling accessories exclusively, has space for additional lines of accessories and supplies.

1019—Iowa Concern, recently occupying new building and doing an exclusive wholesale jobbing business in automobile accessories and supplies, is interested in supplies for repair shop and garage, and accessories and supplies of every description for pleasure cars and motor trucks.

6492—Kansas Firm would like information relative to garage and repair shop supplies.

6855—New York Company, recently incorporated and doing a good business in big plant, would take agency for garage and repair shop supplies and supplies for power wagons.

1473—New York Firm is interested in supplies for garage, repair shop and automobiles.

6237—Minnesota Concern, under new management, would like agency for accessories and supplies and for supplies for garage and repair shop.

1035—Oklahoma Company, which has opened a supply store to specialize in that feature of the business, is in the market for accessories and supplies for automobiles and power wagons.

3612—California Firm, which has just completed a new building, desires to receive catalogues of various lines of automobile supplies and accessories.

4591—Pennsylvania Motor Car Company, under new management, will take agency for garage supplies and automobile accessories and supplies.

SPECIAL OPPORTUNITIES.

3123—Rhode Island Concern desires information with reference to all kinds of portable garages.

EQUIPMENT NEEDED.

7463—New York State Concern is in the market for all kinds of equipment for automobiles and trucks, garage and repair shop, including machine tools.

3911—Iowa Firm is interested in first class equipment for garage and repair shop.

9211—Michigan Company, building factory of brick and steel, wants information relative to machine tools and supplies and equipment for repair shop.

2796—Tennessee House, established in modern plant, desires automobile, garage and repair shop equipment and supplies.

4746—New York State Firm in new quarters is interested in supplies for garage and repair shop.

1668—Georgia Concern is seeking information pertaining to automobile and garage equipment.

3645—Michigan Company, in new plant, wants supplies of all kinds for repair shop.

4766—Kentucky Firm, doing good business, wants agency for equipment of all kinds for trucks and pleasure cars.

6745—Indiana Concern, with new management, is interested in pleasure and commercial car equipment; also equipment and supplies for garage and repair shop.

9261—California House, in enlarged quarters, is in the market for garage and automobile equipment.

7110—New Jersey Association, formed in the interests of motorists, is interested in all kinds of garage, repair shop and automobile equipment.

6736—Massachusetts House, under new management, is in the market for all kinds of equipment for repair shop, garage and automobiles.

6690—Minnesota Firm, in new plant, wants information relative to garage equipment.

6884—California Concern, in new quarters and doing a night and day business, is interested in anything pertaining to the equipment of garage, repair or blacksmith shop.

8020—Massachusetts Concern wants information regarding all kinds of machine tools, garage equipment and parts.

4651—Texas Firm states its needs as being principally for garage equipment and machine tools; also supplies for repair shop and garage.

6194—Minnesota Company, in good field, needs repair shop equipment, including machine tools and supplies for garage and repair shop.

2185—Michigan Concern, handling big business in several lines, requires machine tools, automobile equipment and garage supplies.

8705—Pennsylvania House, under new management, is in the market for machine tools, repair shop equipment and supplies.

WITH THE MANUFACTURERS.

W. A. Zimmerman, general manager of the Mercury Manufacturing Company, Chicago, maker of Mercury commercial vehicles, has established a branch at Boston, where George F. Kehew will look after the New England interests of the company. The service station and salesrooms will be established at 239 Massachusetts avenue, Cambridge, Mass.

The Willard Storage Battery Company, Cleveland, O., maker of Elba storage batteries, has a number of branches located throughout the country, that at 1191-

Digitized by Google

1193 Woodward avenue, Detroit, being shown in an accompanying illustration. This branch is in charge of Max G. Hillman, who is assisted by H. S. Gardner and E. F. Vincent, and like those at New York, Chicago and San Francisco, is prepared to charge batteries and do anything in the way of repairing. All the company's branches carry constantly in stock a large number of the most commonly used types of storage batteries and are in a position to fill orders promptly.

The Electric Products Company, Cleveland, O., maker of the Wotton automatic battery charging panels, has moved from its congested quarters at 6536 Carnegie avenue, to its new building at 10514 Dupont avenue.

The Weller-Thomas Company, Zanesville, O., was recently incorporated by capitalists of that city and will erect a plant in which to manufacture motor fire apparatus.

The Swinehart Tire & Rubber Company, Akron, O., maker of Swinehart tires, has established a branch at 726 Main street, Buffalo, N. Y., to be known as the Swinehart Tire Agency. It will be under the management of E. F. Howell and C. A. Cough.

The Kissel Motor Car Company, Hartford, Wis., maker of KisselKar trucks and pleasure cars, has opened what is said to be the largest building in the United States devoted to the sale and care of one make of automobiles. The service station provides 70,000 square feet of floor space and in addition to the separate salesrooms for the trucks and pleasure vehicles, contains a garage, machine shop, paint shop and stockroom. The structure is three stories high.

The Archibald Wheel Company, Lawrence, Mass., an old established firm, which makes automobile wheels, has been newly incorporated with an authorized capital of $800,000. The officers are: President, Frank M. Andrew; treasurer, Everett H. Archibald; secretary, Fred H. Eaton.

The Dreadnaught Tire & Rubber Company, Baltimore, Md., recently organized to manufacture automobile casings, with authorized capital stock of $1,000,000, has started work on its three-story plant. The president of the company is A. F. Gilbert; vice president and general manager, Wilmer Dunbar; treasurer, C. P. Triplett; secretary, Walter E. Hill.

The Veerac Motor Truck Company, has opened a branch at 247 West 47th street, New York City, with H. B. McGinley as manager.

The Borland-Grannis Company, maker of Borland electric cars, has moved its executive offices into its new building at 310 East Huron street, Chicago.

The Motor Accessories Manufacturers has elected three new members as follows: William H. Brown, Cleveland, O., maker of Travelog time clocks; Fedders Manufacturing Works, Buffalo, N. Y., builder of radiators; National Lead Company, New York City, manufacturer of lead products, white metal alloys and die castings.

The Schoen-Jackson Company, Media, Penn., has opened a New York City branch at 1777 Broadway under the management of W. E. Wardlaw, a practical carburetor man well known in the trade. He will look after the New York interests of the Feps carburetor.

The Auto Crankshaft Company, Detroit, is preparing to construct an addition to its plant at 192 Piquett street. The addition is to be used for the making of camshafts, which the company has added to its production of crankshafts.

The Edward G. Budd Manufacturing Company, Detroit, has moved its offices to the factory of the Grabowsky Power Wagon Company, which it recently acquired.

The Walpole Tire & Rubber Company, with sales offices at 757 Boylston street, Boston, Mass., has three well equipped factories located in Walpole and Foxboro, Mass., and Granby, Que. A general view of the main plant is shown herewith, and it may be stated that the others are quite as modern in every particular, being fitted to produce tires and tubes to meet the requirements of motorists and to have a standard for quality and service which is unsurpassed.

The Wheeler-Schebler Carburetor Company, Indianapolis, Ind., maker of Schebler carburetors, has established a publicity department in connection with its advertising department. Joseph Kelly, a well known Indianapolis newspaperman, a specialist in automobile work, has been placed in charge.

The Weed Chain Tire Grip Company, maker of Weed chain tire grips and anti-skid devices, 28 Moore street, New York City, has located a plant on Logan street, Bridgeport, Conn.

The Motometer Company, Inc., New York City, has appointed W. D. Reeves of Franklin, Ky., the sole distributing agent of the company's radiator heat indicators, known as Motometers, for the entire state of Kentucky. Mr. Reeves will make his headquarters at Franklin.

The United States Tire Company has opened its new branch at Worcester, Mass., in the Graphic Arts building. L. C. Havener has been made manager.

The International Motor Company, New York City, maker of Mack, Saurer and Hewitt trucks, has made some changes in the executive personnel. They were announced by Chairman W. C. Dickerman of the directors' executive committee, as follows: First vice president, John Calder; second vice president, L. H. French; third vice president, E. C. Fink; assistant to first vice president, F. R. Phillips; general sales agent, R. E. Fulton, assistant general sales agent, George H. Hodges.

The Hupp Motor Car Company, Detroit, maker of Hupmobile cars, has found it necessary to establish a parts depot in central Europe to meet the demands of European motorists. This depot has been established at Hamburg, Germany, under the direction of C. H. Dunlap, export manager of the company, and is in charge of George Chailley of Paris, who was secured by John L. Poole, the company's export manager at Paris.

The Miami Cycle & Manufacturing Company, Middletown, O., maker of Merkel motorcycles, and the Davis Sewing Machine Company at Dayton, O., maker of Dayton motorcycles, escaped damage in the recent floods, both factories being out of the flood zone. However, many of the employees of the concerns had their homes submerged and lost heavily. The factories mentioned are shown in accompanying illustrations.

Fred T. Hendee, formerly a business man of Beloit, Wis., has engaged in the motor car and garage business at San Bernardino, Cal. Associated with him is Clem D. Perkins of the latter city, a nephew of Mr. Hendee.

E. A. Rahfeld, Passaic, N. J., dealer in automobile accessories, tires and tubes, has opened a completely equipped tire vulcanizing and sales depot at 37 Lexington avenue.

Charles J. Young, Galveston, Tex., who has conducted a general supply house in the Builders' Exchange building, that city, has established an automobile supply house in connection with a general repair and overhaul shop. He is planning to erect one of the most completely equipped garages in the South.

S. C. Bradford & Son, Storm Lake, Ia., has opened a garage in that city and will maintain a modernly equipped repair shop. Bernice Bradford will have direct charge of the business.

F. W. Sauermann, for the past 14 years cashier for the Gansert Candy Company, has resigned to embark in the automobile business at Rock Island, Ill. A service station will be established in a location to be determined later. Henry Wochner, an experienced automobile man, who has been identified with the industry for a number of years, is a partner in the concern. The firm will handle the Colby car, made by the Colby Motor Car Company, Mason City, Ia.

Meeley & Pressman has opened a tire store at 1659 Broadway, New York City, with a stock of high grade goods.

John Milsom, well known in automobile circles at Salem, Ore., has purchased the Embry garage at 246 State street. A complete repair shop is included in the purchase and Mr. Milsom will carry a full line of accessories and supplies.

The Motor Sales Company, Philadelphia, Penn., has been formed by Frank Le Flem, Charles Parker and Richard Kindig, and will handle the National, Henderson and Empire cars. All three members of the firm have seen many years' experience in the automobile business in Philadelphia and their success is assured.

The Columbia Garage, 421 North 54th street, West Philadelphia, Penn., has been opened by Ashton S. Rea & Co. The repair shop is completely equipped. Mr. Rea was until recently affiliated with the United Motor Philadelphia Company and is well known in the industry.

The Auto Tire & Vulcanizing Company, Grand Rapids, Mich., has been incorporated with a capital of $3000. The plant will be located on Island street. A patent has been applied for on a sub-casing which the company will make. Emil Tisch is president, L. N. Space is vice president, and O. H. Goldsmith is secretary and treasurer.

Oscar L. Auselm of St. Louis, Mo., has purchased the Croddy carriage factory at Arcola, Ill., and will operate a painting and repair plant. The storage room will be converted into a garage.

John Padgett has purchased the old L. D. S. church at Knob Noster, Mo., for $600. Mr. Padgett is a well known machinist and repair man and will open a first class garage and repair shop.

C. L. Whitney & Co., Kansas City, Mo., has opened headquarters at 1829-1831 McGhee street, with a complete stock of parts for Michigan cars, which the company will distribute throughout the entire southwest territory. C. L. Whitney, the head of the concern, is well known throughout that territory, having for 19 years been connected with the Columbus Buggy Company of Kansas City, the latter part of his time as general manager.

The Ents Automobile & Battery Company, St. Louis, Mo., has opened its new electric garage and storage battery repair station in the downtown section of the city. The company will make a specialty of caring for electric trucks. Mr. Entz was for over 12 years with the Electric Storage Company as engineer and manager of the Baltimore and St. Louis offices and for the past four years has been the western representative of the Philadelphia Storage Battery Company.

G. W. Feits has taken the interest of Mr. Bacon in the firm of Langford, Bacon & Myers, distributor of Lauth-Juergens trucks, and has been appointed vice president of the concern. He has established a branch house at Los Angeles, Cal., which he is managing, being assisted by Harry C. Collins, formerly head of the office of the Allis-Chalmers Company.

The Streuber-Mooney Company, Erie, Penn., and Buffalo, N. Y., has been formed to handle the sales of Keeton cars, made by the Keeton Motor Company, Detroit, for six counties, including Erie and five others in Pennsylvania, and six counties in New York State, including Genesee county, in which Buffalo is situated. The members of the firm are Lewis Streuber and Frank J. Mooney.

C. W. Whitson and C. O. Usborne of Detroit have formed the Usborne-Whitson Sales Company to handle in Michigan the Keeton car, made by the Keeton Motor Company of Detroit. A large salesroom has been secured at 730 Woodward avenue, Detroit. Both men are well equipped by experience to handle Keeton sales successfully.

The M. B. M. Motor Company, Boston, Mass., a recently incorporated concern, has made final arrangements to handle the Maxwell car at 1116-1118 Boylston street, under the management of Charles Addison Malley, father of the present Massachusetts vehicle lighting law and other legislation of advantage to motorists.

E. R. Bennett and G. Lemaster have opened their garage at 113 North Main street, Ottawa, Kan., under the firm name of the Redlight garage. Modern machinery has been installed and a general automobile and repair business will be conducted.

R. A. Vos of East Saugatuck, Mich., has acquired the property formerly owned by the Holland Umbrella Company, Holland, Mich., and the building will be equipped for a first class garage, which Vos will conduct.

C. W. Evans and W. A. Rose have taken over the Boulevard garage at 29 Webster street, Brookline, Mass., and will conduct a general garage and repair business. A complete electric charging equipment has been installed and the firm will handle supplies.

The Garrett Garage Company, Wallace, Idaho, has started in business in a new garage on Pine street. The machine equipment is complete and shafting was installed of sufficient length to permit of extension of facilities from time to time.

The McAden Automobile Company, 106 Fayetteville street, Raleigh, N. C., has taken over the business of the

Digitized by Google

Jackson Tri-State Motor Car Company, Louisburg, N. C., and will conduct it at Raleigh. The McAden company acquires the garage and accessory business and Jackson distributing agency for the same territory. R. Y. McAden is the sole owner of the company and has had many years' experience in the automobile business.

The Kolb Sales Company, with offices in the United States Rubber building, Fifty-eighth street and Broadway, New York City, has recently been organized to represent the interests of different automobile accessory and specialty manufacturers in the eastern territory. Milton B. Kolb, who has been identified with various branches of the motor car industry in the past 10 years, is at the head of the new organization.

The James Bailey Company, Portland, Me., has been appointed state distributor of the well known Invader lubricants, made by the Invader Oil Company, New York City. The company expects to greatly enlarge its oil sales by handling this brand of lubricants.

The G. R. Cowie Company, Inc., Washington, D. C., distributor of Cole cars, made by the Cole Motor Car Company, Indianapolis, Ind., has taken over the G. R. Cowie Company, and the following officers have been elected: President, G. R. Cowie; vice president, L. Bert Nye; treasurer, E. S. Wolt; secretary, W. H. Bennett. The new concern also acquires the Standard garage, 2121 Fourteenth street, to which improvements will be made.

The Case Motor Sales Company, St. Joseph, Mo., was recently formed and is located in the garage formerly occupied by the Klos Motor Car Company at Second and Faron streets. G. R. Livergood is manager of the concern and J. C. Gifford is secretary and treasurer.

Harry J. Twitchell, who in 1911 and 1912 represented the Cole Motor Car Company, Indianapolis, Ind., maker of Cole machines at Portland, Ore., and who helped form the Christofferson Aviation Company at San Francisco, Cal., has returned to the industry. He has joined partnership with E. B. Snyder at Spokane, Wash., and they will operate under the name of Cole-Spokane Company.

The W. D. Sweet Motor Car Company, Binghamton, N. Y., has purchased the business of W. A. Crandall Company, 233 Water street, and will make that city its distributing point for Speedwell cars in Pennsylvania and New York.

George M. Bullock, Great Barrington, Mass., has sold his garage business to Elton S. Jones.

Batdorf & Stampfle, Paterson and Detroiter agent, Columbus, O., has dissolved. W. H. Batdorf will continue as the Paterson agent and has joined with Frank P. Corbett, state distributor for Detroiter machines.

L. Frank Wilson has left the factory sales department of the Buick Motor Company, Flint, Mich., maker of Buick cars, to join the Detroit branch of the company.

Albert L. Bennett, eastern representative of the Abbott Motor Company, Detroit, maker of Abbott-Detroit cars, has been made sales manager of the Abbott-Detroit Company of New York, New York City.

C. A. Rockwell has resigned from the Utica Auto Supply Company to become manager of the Sears Auto & Supply Company, 12-14 Genesee street, Utica, N. Y.

C. E. Van Vleck, Jr., has become interested in S. J. Wise & Co., 1794 Broadway, New York City, and will assist in the sales of the Touraine and Paige cars. He will also handle the Parsons scientific gas saver.

Harry N. Sullivan has joined the sales force of the Park Garage, 852 Blue Hill avenue, Dorchester, Mass., and has charge of the used car department of the company.

H. E. Parent, who has had charge of the repair and service department of the Cadillac Company of Boston, has taken a position in a similar capacity with the Republic Motor Company of that city.

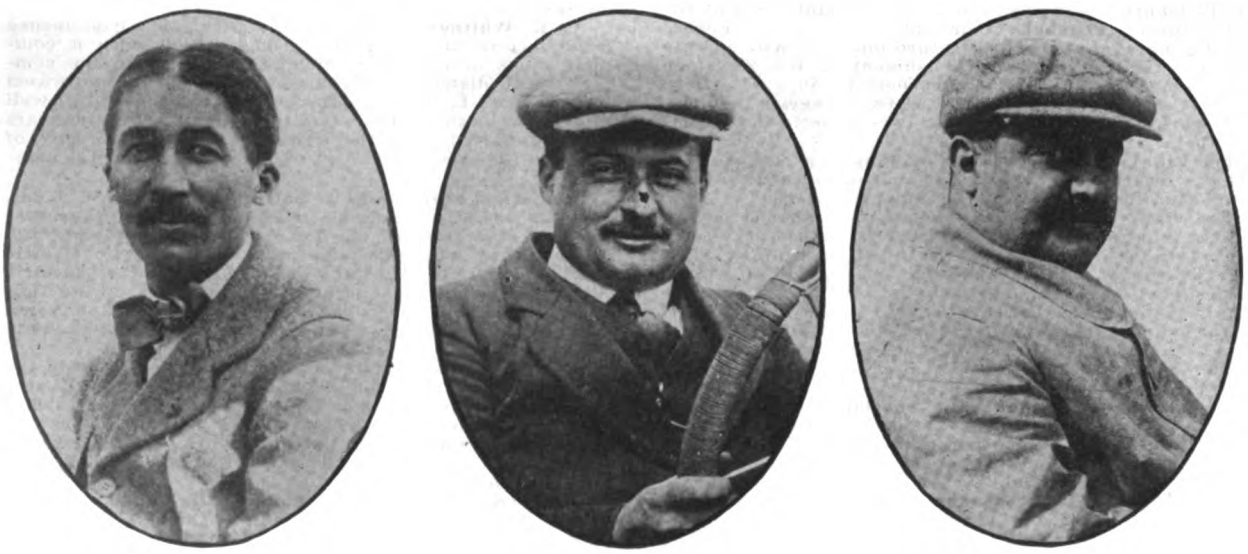
Joseph Stern, formerly connected with Wyckoff, Church & Partridge, New York City, has taken the American rights for the sale of Commer trucks, and has opened an office in the Thoroughfare building, 57th street and Broadway, New York City.

C. T. Schaefer has resigned as chief engineer of the Palmer-Myer Motor Car Company, St. Louis, Mo.

John A. Graham, recently sales manager for the Westfield Motor Truck Company, Westfield, Mass., has entered the employ of the Sanford Motor Truck Company, Syracuse, N. Y., as district manager, with headquarters at Boston. Mr. Graham is a mechanical engineer and was formerly a resident of Boston.

W. D. Kelly is the new factory manager of the Oakland Motor Car Company, Pontiac, Mich., maker of Oakland cars. He succeeds S. H. Humphreys, who formerly held the position.

W. W. Garrison, assistant to C. C. Winningham in the advertising department of the Hudson Motor Car Comuany, Detroit, maker of Hudson cars, has resigned.



Three Foreign Drivers Who Will Compete in Indianapolis Memorial Day Race: Left to Right, Jules Goux, Peugeot; Albert Guyot, Sunbeam; Paul Zuccarelli, Peugeot.

Otis C. Friend, assistant sales manager of the Mitchell-Lewis Motor Company, Racine, Wis., maker of Mitchell cars, has sailed for Europe in connection with business of the London and Paris branches of the company. Henry C. Plow, who has been in charge of the foreign department for the past two years, is making arrangements to return to the United States.

W. H. Whiteside, president of the Stevens-Duryea Company, Chicopee Falls, Mass., maker of Stevens-Duryea cars, made a recent visit to California, looking after the interests of the western representatives of the company.

W. H. Schwartz, sales manager of the Metz Company, Waltham, Mass., maker of Metz cars, recently visited the Pacific Coast and a factory branch of the company has been opened at 1025 South Broadway, Los Angeles, Cal., with C. A. Lown as manager.

Otto Stoll, formerly manager of the St. Louis branch of the General Motors Truck Company, has been appointed assistant sales manager, succeeding E. J. Kilborn, who has become general manager of the Chicago district.

C. P. Hennessey, formerly secretary to George E. Daniels of the Oakland Motor Car Company, Detroit, maker of Oakland cars, has been appointed manager of the company's branch at Nashville, Tenn. Monte Stone, formerly manager in Nashville, has been transferred to the branch at Little Rock, Ark.

Albert Guyot, Jules Goux and Paul Zuccarelli are foreign automobile drivers of international reputation who have entered the 500-mile race at Indianapolis, Ind., Memorial Day, and the American drivers will have to look well to their laurels to avoid defeat. Guyot will drive a Sunbeam, made in England, while Goux and Zuc-

Digitized by Google

carelli will pilot Peugeot cars, made in France. In 1908 Guyot won in the light car class for the French Grand Prix and has taken hundreds of medals and trophies by his scientific driving. Goux is best known as the winner of the Sarthe Grand Prix last year, although he has won many other important events. Zuccarelli is also a winner of many events and is a fitting teammate for Goux.

Charles M. White, Jr., who has been representing the Firestone Tire & Rubber Company, Akron, O., maker of Firestone tires, in Syracuse, N. Y., has located at Detroit as pneumatic tire representative to the automobile manufacturers of Michigan. While in Syracuse Mr. White was particularly active in the interests of the company, and it was due largely to his efforts that it was deemed wise to open a new branch and service station there, which will be located at 502-504 East Genessee street. His removal to the heart of the motor car industry is looked upon in the nature of a well deserved promotion. E. A. Hoffman, formerly manager of Wyckoff, Church & Partridge in New York City, has been appointed manager of the new Firestone branch in Syracuse. Mr. Hoffman has lived most of his life in Syracuse, where he has a host of friends, and his selection to take up the work now laid down by Mr. White is considered particularly fortunate.

Charles M. White, Jr., with Firestone Tire & Rubber Company.

V. Link, chief engineer of the Universal Motor Truck Company, Detroit, maker of Universal trucks, has resigned. He is said to be the original designer of the Universal truck and is reported to contemplate entering business for himself.

Clarence O. Sacks is to become advertising manager of Gray & Davis, Boston, maker of starting apparatus, and he will assume his duties July 1, at which time the plant at Cambridge, Mass., will be completed. He will make his headquarters at Cambridge.

Charles T. Schoen of the Schoen-Jackson Company, Media, Penn., has returned from a trip abroad, where he went in the interests of the Feps carburetor, made by the company.

Joseph D. Porter, who has been sales manager for the Garford Company, Elyria, O., maker of Garford trucks and pleasure cars, has retired and has been succeeded by George F. Russell, who has been acting as supervisor of Willys-Overland district managers east of the Mississippi river.

Rene Petard, chief engineer of the Mitchell-Lewis Motor Company, Racine, Wis., has retired from that position, having completed the work for which he was engaged. It is probable he will return to Paris, France, where he has other interests, although he may also represent the Mitchell foreign department, which has reached considerable proportions.

Ernest Brandt, sales manager for the Maxwell car interests, after the taking over of that company by the new Maxwell Motor Company, could not go to Detroit from New York City, owing to business interests requiring his presence in the East, and so he retired from the company with the very best wishes of Walter E. Flanders and other officials.

W. B. Miller, vice president and director of the B. F. Goodrich Company, Akron, O., maker of Goodrich tires, has been replaced by D. M. Goodrich, Mr. Miller having withdrawn from the company.

Dr. Charles G. Percival, the well known automobile world tourist, recently attempted to enter Mexico, but was barred at Laredo. Dr. Percival said there was fighting going on there continually.

Henry B. Anderson has been elected president of the Automobile Club of America to succeed Frederick W. Whitridge. He was chosen at a special meeting of the board of governors, held at New York City. Mr. Anderson has been a governor for some years and was one of the earliest members of the club.

M. H. Stimpson has become general manager of the United States Radiator Company at Dunkirk, N. Y. He was formerly manager of two of the plants of the Buick Motor Company at Flint, Mich.

Charles Eliot Ware Woodward, head chemist for the Fisk Rubber Company, Chicopee Falls, Mass., almost since the establishment of the concern, died very suddenly at his home at Chicopee Falls recently. His many friends in the industry sent their condolences to the Fisk company and to his family.

T. A. Peck has become affiliated with the engineering corps of the Vacuum Oil Company, Rochester, N. Y. He is thoroughly familiar with lubrication work and has been connected with the technical and engineering end of the automobile industry for the past 13 years.

Frank R. Tate, formerly with the United Motor St. Louis Company and more recently with the Ford Motor Company, has been elected vice president of the Hudson-Phillips Automobile Company, 1025 North Grand avenue, St. Louis, Mo. He will be general manager of the company, which distributes Hudson cars, made by the Hudson Motor Car Company, Detroit.

Hayden Eames, well known in the automobile industry and at one time prominently identified with the affairs of the Studebaker Corporation, Detroit, maker of Studebaker pleasure and commercial vehicles, has become general manager of the Standard Electric Car Company, Jackson, Mich., maker of Standard electrics. C. F. Kreuger has resigned active connection with the company, but will remain a director. Carl Morgan, formerly the Cleveland branch manager, has become factory sales manager.

George Veasey, well known in Boston automobile circles, has joined the selling department of the Premier Motor Car Company of New England, distributor of Premier cars in that territory.

G. S. Salaman of Mishawaka, Ind., is preparing to bring out a light, low-price car in the near future. He is being joined by J. L. M. Howe, who has resigned as assistant engineer in the electrical truck department of the Studebaker Corporation, at South Bend, Ind.

James Anderson of Detroit, an expert in gas engine and automobile work, has taken a position as foreman of the repair department of the Little Rock Auto Company, Little Rock, Ark., agent for the Chalmers, American and Buick lines.

D. D. Phillips has been secured as manager of the Bell Automobile Company, Nashville, Tenn., distributor of Apperson cars, made by the Apperson Bros. Automobile Company, Kokomo, Ind.

J. C. Austin, former chief engineer of the Regal Motor Car Company, Detroit, maker of Regal machines, has become engineer of the passenger car department of the Studebaker Corporation, and assistant to James G. Heaslett, chief engineer.

Manager L. A. Halley of the Chicago branch of the Motz Tire & Rubber Company, Akron, O., maker of Motz tires, has added Charles R. Serfass and S. F. Frensdorf to his sales staff. Both men are considered among the foremost tire salesmen in the country.

J. F. Richman, for the past four years factory superintendent for the Hudson Motor Car Company, Detroit, has been appointed factory production manager of the Cole Motor Car Company, Indianapolis, Ind., following the announcement of George H. Strout's resignation from the Cole organization to become general sales manager for the Haynes Automobile Company, Kokomo, Ind. Mr. Richman goes to his new duties with the good wishes of a host of friends in Detroit and throughout the industry. Before becoming associated with the Hudson company he was for a long time with the Maxwell-Briscoe Motor Company's plant at Newcastle, Ind., and he also served for a time with the Olds Motor Works, Lansing, Mich., and with a number of machine factories. He is particularly well fitted for the position and his selection is in keeping with President Cole's announced intention of securing men of the highest ability to head the various departments of his organization.

J. F. Richman, Production Manager, Cole Motor Car Company.

Fred T. Johnson, formerly with the Fisher Auto Company and the Marion Motor Car Company of Indianapolis, Ind., has joined the forces of the Ford Motor Company, Detroit, maker of Ford cars, and has been made manager of the branch in Omaha, Neb.

Digitized by Google

Charles W. Newhouse, one of the most prominent automobile men of San Francisco, Cal., has joined the sales staff of the Haynes Auto Sales Company, Western distributor of Haynes cars, made by the Haynes Automobile Company, Kokomo, Ind. Mr. Newhouse will be special representative for the company.

Philpott & Baker is a new firm at Niagara Falls, N. Y., formed for the purpose of manufacturing a tire filler to be known as E-Z-R-N-AIR. It is the invention of E. E. Philpott, a well known chemist of Niagara Falls.

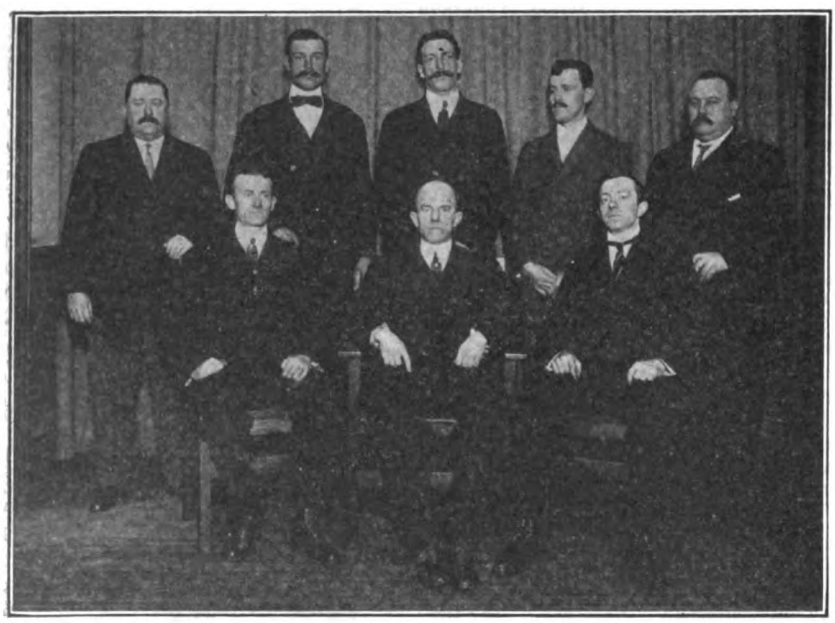
L. F. Marshall, who was formerly with the United States Tire Company, is now with the solid tire department of the Swinehart Tire Company, Akron, O., maker of Swinehart tires.

C. C. Edwards, who for some time managed the Boston branch of the Louis J. Bergdoll Motor Company, has severed his connection with that concern to take charge of the eastern territory for the Midland Motor Company, East Moline, Ill., maker of Midland cars.

J. Carroll Cone has taken the position of manager of the automobile department with the J. T. Lloyd Company, Little Rock, Ark., succeeding Eugene Polk, who resigned recently to join the White Auto Company of Texas.

Harry S. Houpt, who recently resigned as sales manager of the American Locomotive Company, New York City, maker of Alco cars, has been elected vice president of the Gurney Elevator Company. He will have charge of sales of installations of more than $50,000 and will locate his office in New York City.

Alfred Reeves and S. D. Waldon have resigned as members of the executive committee of the National Association of Automobile Manufacturers. J. N. Gunn and Alvin Macauley have been chosen in their places.



Faculty of the Bedford Branch Y. M. C. A. Automobile School: Left to Right, Standing, John F. Ryan, Frank Exner, Prof. George Meyerhoff, H. D. Webster, W. C. Benjamin; Sitting, John Lettenberger, Jr., Prof. Carl F. Schuls, Frank Berry.

Paul V. Clodio, a veteran of New York City automobile circles, has joined the selling force of the F. B. Stearns Company of New York, distributor of Stearns cars. Mr. Clodio formerly was connected with the sales department of the Mercedes and Benz companies.

G. F. Weaver of Philadelphia, J. G. Fulton of Omaha, Neb., and J. L. Stanley of the State of Washington, are the three salesmen of the Thomas B. Jeffery Company, Kenosha, Wis., maker of Rambler cars, who have become stockholders in three of the leading railroads of the country as the result of making the best sales record in a contest in the Jeffery organization, lasting three months.

Guy Vaughn, automobile designer and engineer, well known throughout the country, has joined the engineering forces of the F. B. Stearns Company, Cleveland, O., maker of Stearns-Knight cars.

William Van Den Plas, general manager of the Van Den Plas body factory at Brussels, Belgium, and Emile D'Ieteren of D'Ieteren Bros., automobile builder of Brussels, recently passed two days as the guests of the Hayes Manufacturing Company, Detroit. They were particularly interested in sheet metal parts for bodies, hoods, fenders, etc., and arranged to have the Hayes company do considerable work for them. They spent much time inspecting the plants of the Hayes company, the Packard Motor Car Company and the Ford Motor Company, and were greatly surprised at the magnitude of the industry in this country.

William Pickens, representative of the Western Automobile Association, was in New York recently making arrangements for holding a race meet at Brighton Beach this summer. Mr. Pickens said that $50,000 in prize money will be offered.

Daniel E. Whitman, formerly with J. W. Leavitt & Co., Los Angeles, Cal., is now with the Reo Pacific Company at San Francisco, Cal., where he will have charge of the Apperson department of the Norman De Vaux business.

C. J. Hagerling, manager of the Dahl Punctureless Tire Company, Chicago, maker of Dahl tire filler, has closed a contract with the New Jersey Car Spring & Rubber Company, Jersey City, N. J., for the distribution of its tires in Illinois and Indiana.

Harry E. Marvel has associated himself with the Fiat Motor Sales Company, Boston, Mass., which handles the product of the American Fiat factory, Poughkeepsie, N. Y., which has been in operation the past three years.

Frederick C. Benson, who was formerly associated with C. A. Benjamin in the Packard garage at Syracuse, N. Y., has taken an important position in the sales department of the American Locomotive Company, New York City, maker of Alco cars, to which place he was appointed by Mr. Benjamin since the latter became general sales manager.

O. C. Hutchinson has resigned as general manager of the Olds Motor Works, Lansing, Mich., maker of the Oldsmobile, and has gone to Detroit, where he will represent the company. General Sales Manager J. V. Hall, who several months ago went to San Francisco to take charge of the California branch, has returned to occupy his former position as general manager, temporarily.

The Bedford Branch, Y. M. C. A., Bedford avenue and Monroe street, Brooklyn, N. Y., has an automobile school which is one of the oldest in the country, having been organized in January, 1908, and it is one of the largest and best known. It graduates over 600 students a year, many of whom are owners or prospective owners, while others are garage mechanics, chauffeurs, salesmen, etc. Several are now holding responsible positions in the industry, a large percentage of these having been secured through the efforts of the school in behalf of the men. The equipment is thoroughly in keeping with the reputation of the institution, the latest features of automobile design and fittings being added as fast as their practicability has been established. Four and six-cylinder engines are kept in working order so that the students may wire, adjust and operate them; all types of ignition systems, both magneto and battery, and all kinds of carburetors, both mechanical and automatic, are utilized; even a 1913 electric motor starter is included, making everything complete and up-to-date. An interesting feature of the course is the Friday night lecture, for which the whole school assembles once a week to hear some expert, who often illustrates his talk by stereopticon views. An accompanying illustration presents some of the instructors, the full list being as follows: Supervisor, Prof. Carl F. Schulz, M. A.; shop teachers, Prof. George Meyerhoff, M. E.; John Lettenberger, Jr., H. D. Webster and Frank Berry; road instructors, Frank Exner and W. Davies; registrar, W. G. Benjamin; school office assistant, John F. Ryan. Messrs. Schultz, Lettenberger and Berry are members of the Society of Automobile Engineers.

H. F. Martin, who for 10 years has been general sales manager of the Pennsylvania Steel Company, has resigned to become general sales manager of the Eveland Engineering & Manufacturing Company, 2324 Market street, Philadelphia, Penn. William H. Baldwin, for a number of years treasurer of the Standard Roller Bearing Company, Philadelphia, has taken the position of controller of the Eveland company.

William P. Kennedy and Joseph A. Anglada, consulting engineers, are to open headquarters in the United States Rubber building, 1790 Broadway, New York City. Mr. Kennedy, who is a transportation expert, has for several years been prominently identified with the American Locomotive Company and the Baker Motor Vehicle Company as a consultant, while Anglada is probably best known for his work in developing demountable rims.

A. B. Barkman of the sales department of the Maxwell Motor Company, Detroit, has been sent to Europe on special work.

G. T. Lownsbery, recently from the East, will assist R. B. Tracy, who is Michelin district manager at Chicago, and will take the post of manager of the branch of the Michelin Tire Company at 1106 Hennepin avenue, Minneapolis, Minn.

T. F. Kilmartin, until recently connected with the sales staff of the San Francisco branch of the Lozier Motor Company, Detroit, maker of Lozier cars, has taken

Digitized by Google

a position with Don Lee's northern California Cadillac organization.

Edward S. Babcox, formerly advertising manager of the Yawman & Erbe Manufacturing Company, Rochester, N. Y., maker of filing systems, is now advertising manager of the Firestone Tire & Rubber Company, Akron, O., maker of Firestone tires. J. S. Sleeper, former advertising manager of the Firestone company, is now general sales manager of the Colonial Printing Company, Cleveland, O.

E. Louis Kuhns, who for the past 18 months has been manager of the Studebaker interests in New York and New England, has retired from active service, although he will remain as a director of the Studebaker Corporation, Detroit, maker of pleasure cars and trucks. Mr. Kuhns went to New York from Chicago, where he had charge of the corporation's interests for four years. Altogether he has been 20 years in the service of the concern. He will reside in Chicago. R. T. Hodgkins is now in charge of the horse vehicle business for the Studebaker in New York City, and George H. Phelps is in charge of the automobile division.

C. Arthur Benjamin has been appointed general sales manager of the American Locomotive Company, New York City, maker of Alco cars and trucks. Before joining the latter company he was for four years sales manager of the H. H. Franklin Manufacturing Company, Syracuse, N. Y., two years sales manager of the Babcock Electric Company, and subsequently a distributor for Packard and Hudson cars in Syracuse, N. Y.

William Whipple, Genoa, Ill., lays claim to the honor of being the youngest real agent in the United States who has a regular contract as an automobile dealer. He recently passed his 16th birthday and although his father is the possessor of five prosperous farms in Illinois, he has a decided preference for building up a bank account strictly by his own energy. He is the duly accredited agent for Michigan cars, made by the Michigan Motor Car Company, Kalamazoo, Mich., in Genoa. The young man has a youthful enthusiasm which is backed by an accurate knowledge acquired by actual experience in the Michigan factory at Kalamazoo, having spent considerable time as a helper to make himself thoroughly familiar with automobile construction. He is in his third year at the high school at Sycamore, Ill.

William Whipple, Genoa, Ill., Youngest Automobile Agent.

Samuel Weston Scott, who was for some time connected with the Boston branch of the Velie Motor Vehicle Company, Moline, Ill., maker of Velie cars, has joined the sales force of the W. H. Stevens Company, Boston distributor for National cars, made by the National Motor Vehicle Company, Indianapolis, Ind. Mr. Scott is well known in motor car circles and will make a valuable addition to the National force.

Harold D. Bornstein, well known in Boston and New England motor car circles, is with the Premier Motor Car Company of New England, where he has joined the sales department.

O. J. Rhode, treasurer and manager of the Splitdorf Electrical Company, Newark, N. J., maker of Splitdorf magnetos, has returned from a business trip to England, during which he established a branch in London. The new Splitdorf quarters are located at 6 City Road, Finsbury Square. Other Splitdorf stations are to be opened at Toronto, Can., and Atlanta, Ga.

Louis M. Baker has been appointed sales manager for Clarence N. Peacock & Co., for whom he will direct the sales of the Ames shock absorbers. Two years ago Mr. Baker established the Baker Rim Company and retains his financial interest in that concern, although he will devote his entire time to the Peacock company's business.

Adolph Daimler, president and general manager of the Daimler Motoren Gesellschaft, Untertuerkheim-Stuttgart, Germany, died recently at the age of 42 years. He was a son of Gottlieb Daimler, a pioneer in the automobile industry in Germany and one of the leading men in the industry in that country.

The Continental Motor Manufacturing Company of Detroit and Muskegon, Mich., has appointed Albert H. Doolittle as advertising manager. Mr. Doolittle is well known in the industry and goes to the Continental company from the staff of the J. Walter Thompson Advertising Agency of Detroit. After studying engineering at Cornell University Mr. Doolittle became a member of the engineering force of the Pope Manufacturing Company, Hartford, Conn., in 1904. Less than a year later he entered the shops of the Electric Vehicle Company of that city for a thorough course in automobile building. There he went through every department of mechanical construction. In 1909 he made a 7000-mile tour of Europe, during which he gained a good insight into the methods of the foreign motor car makers. Upon his return he entered the employ of the Knox Automobile Company, Springfield, Mass., and in six months became advertising manager. His copy was conceded to be of special value and his publicity stories were widely used. In this manner he was brought to the attention of the Journal Company of Troy, N. Y., where he aided in directing the advertising campaigns of various automobile concerns and became automobile editor of the Carriage Dealers' Journal. While engaged in special work for this company on behalf of a factory in Moline, Ill., he became associated with the Thompson agency.

A. H. Doolittle, Advertising Manager, Continental Motor Manufacturing Company.

F. N. Schwab was recently placed in charge of the Chicago branch of the Speedwell Motor Car Company, Dayton, O., maker of Speedwell cars and motor trucks. He was formerly connected with the organization of the National Cash Register Company of Dayton.

R. W. Meacham recently took the position of Detroit sales manager for the Herreshoff Motor Company, maker of Herreshoff cars. He will have charge of the sale of these cars in Wayne county and his offices will be located at the Herreshoff factory in Detroit.

George H. Strout, for the past year district sales manager for the Cole Motor Car Company, Indianapolis, Ind., maker of Cole cars, has been appointed general sales manager of the Haynes Automobile Company, Kokomo, Ind., maker of the Haynes line. He succeeds Webb Jay, who with several others has organized the Haynes Motor Car Company, with headquarters at Chicago, to take over the sales of Haynes cars in the Middle West. Mr. Strout is one of the best known men in the industry and his change of plans came as a complete surprise, even to his associates with the Cole company, who join with his many friends and acquaintances in wishing him success in his new position. For a long time he was sales manager of the Apperson Bros. Automobile Company of Kokomo, maker of Apperson cars, and therefore will be entirely at home in that city. While with the Cole organization he did much to

George H. Strout, Sales Manager, Haynes Automobile Company.

Digitized by Google

strengthen the sales force east of the Mississippi river. The officers of the new Haynes sales company in Chicago are as follows: President, A. E. Starbuck; vice president, Webb Jay; secretary and treasurer, A. G. Seiberling.

George Y. Bentel, head of the Pacific Coast agency for Simplex and Mercer cars, has announced the appointment of Bert Latham as manager of the San Francisco branch of the agency. Mr. Latham succeeds Rene J. Marx, who retired to become the Pacific Coast distributor of the Mercedes line.

T. J. Megear has been made branch manager and F. von A. Cabeen, Jr., sales manager of the new Philadelphia branch established by the American Locomotive Company, New York City, maker of Alco cars and trucks. Mr. Megear was formerly secretary and Mr. Cabeen vice president of the Longstreth Motor Car Company and both have long been connected with Philadelphia territory.

J. R. Coleman, formerly connected with the E. R. Thomas Motor Company, Chalmers Motor Company, Hudson Motor Car Company and Packard Motor Car Company, has resigned as chief engineer and designer of the Atterbury Motor Car Company. Mr. Coleman is well known to the trade, having started with the Thomas company in 1904, when that concern was in its infancy. His most prominent previous connection was with the Hudson company as assistant chief engineer to C. H. Taylor. The distinct change of design in the Atterbury line of trucks is representative of his class of work.

M. A. Magee, who for several years has been connected with the Motz Tire & Rubber Company, Akron, O., maker of Motz tires, has been appointed sales manager of the company, succeeding P. M. Pontius, who is specializing in the work of the electric pleasure car tire and is now in the position of manager of that department.

J. C. Quimby, formerly connected with the Peerless Motor Car Company, Cleveland, O., maker of Peerless trucks and pleasure cars, and for a time manager of the Thomas factory used car department, has joined the sales force of the Packard Motor Car Company of Boston as assistant manager of the used car department.

NEW BUILDINGS AND REMOVALS.

The California Electric Garage, Long Beach, Cal., has located in its handsome, modern building, recently completed on American avenue.

George Dobbins, 392 Belleville avenue, Newark, N. J., contemplates an addition to his garage in the near future.

H. T. Cartmel and H. E. McMillin, Glendale, Ariz., are having a new garage building erected on Grand avenue. It will be modern throughout and the company will carry a complete assortment of automobile accessories.

The American Auto Top Company, New York City, is now located in new quarters at 224 West 49th street.

The Texas Motor Car & Supply Company, Houston, Tex., is having a new garage built for its future occupancy on Irvine street.

Bryon & Cunningham, Waseca, Minn., is having a substantial addition erected to its garage.

John H. Fleming, owner of the City Hall garage, Scranton, Penn., has moved to the Farr building, 220 Adams avenue. He handles the Hudson and American lines.

Dr. C. G. McManay, proprietor of the McManay garage, has purchased the building at 4 East Sixth street, Charlotte, N. C., and will remove his garage business there.

The Colby Auto Company, Mason City, Ia., has moved into new quarters on Fifth street.

J. S. Allason, Seattle, Wash., has leased the business block at 854 Third street, San Bernardino, Cal., and will establish the Exchange garage.

George W. Bush, Newton Center, Mass., is remodelling a portion of his stable into an automobile garage and will be prepared to care for all lines of business.

The Bowe Carriage Works, Meriden, Conn., is building a modern garage. The company is agent for Overland cars, made by the Willys-Overland Company, Toledo, O.

The Regal Automobile Company, 1278 Bedford avenue, Brooklyn, N. Y., is enlarging its offices and salesrooms. A repair shop and machine shop are also being installed.

The Mundy Garage & Machine Company, Newark, N. J., has leased the building at 102 Greene street, which will give the company increased quarters to care for growing business.

The Central Auto Repair Company, St. Louis, Mo., will occupy the building at 3221 Olive street, which is being remodelled as a modern garage and repair shop.

Jacob Roth, Erie, Penn., distributor for Cadillac cars, made by the Cadillac Motor Car Company, Detroit, will soon occupy his new garage on West 10th street, which is nearing completion.

Moir & McMullen, Le Mars, Ia., will erect a modern garage on Main street, work now being in process.

C. A. Gable, Mt. Carmel, Penn., expects to erect a garage 18 by 20 feet.

A. E. Martin, Willow Grove and Stenton avenue, Philadelphia, Penn., is to build a one-story garage at a cost of $3000.

E. E. Cole and associates of Marysville, Cal., will occupy a building on Second street, which is being remodelled for use as a sales, supply and garage business.

Moulter & Franklin, Red Bluff, Cal., has occupied a new, modern garage on Walnut street, that place.

R. B. Rich will soon occupy a new garage, being erected for him on Fourth street, Riverbank, Cal. He will install modern equipment throughout.

Schaeffer & Laudenslager, Allentown, Penn., is having a modern garage erected at 37 South 17th street, that city.

The Auto Tire & Vulcanising Company of Newark, N. J., will move into the William Flory building, East Stroudsburg, Penn. An up-to-date vulcanizing plant and repair department are being installed.

H. G. Guenther, San Antonio, Tex., is having a modern building erected in which to locate his automobile business. He will carry on repair work and handle a full line of motor car accessories, etc.

Frank P. Clark, 30th and Race streets, Philadelphia, Penn., is planning to build a new garage.

The George C. Brinkman Motor Car Company, St. Louis, Mo., has located in its new building at 2818 Locust street.

The J. A. Zeman Auto Company, 310 Main street, Davenport, Ia., is making extensive improvements and enlargements to its garage and salesrooms.

The Washington Cartercar Company, Seattle, Wash., has established quarters at 1516 Broadway. The company distributes Cartercar machines, made by the Cartercar Company, Pontiac, Mich.

The Howard Motor Car Company, Los Angeles, Cal., is now located in its large new service building at 1148 South Olive street.

The Pennypacker Engine Starter Company, Los Angeles, Cal., has opened a service station at 2210 South Main street, that city.

The Los Angeles Alco Motor Sales Company, 1256 South Flower street, Los Angeles, Cal., has materially enlarged its quarters to care for increased business.

The Clark Motor Car Company, Louisville, Ky., distributor of Premier and Reo cars, will soon occupy its new sales and service station at Broadway and Brook street, which is nearing completion.

The H. O. Harrison Company, Los Angeles, Cal., has moved into its spacious new building at 1323-1327 South Flower street. The building is fireproof and modern in all its appointments. It contains a garage and complete machine shop, which is fitted with all requisite machinery for automobile work. The company handles the Peerless, R-C-H and Waverley electric lines..

The Don Lee Company, San Francisco, Cal., has moved into its new five-story building on upper Van Ness avenue and California street. The building contains 62,000 square feet. The Don Lee Company now has distributing branches for Cadillac cars at Los Angeles, San Francisco, Oakland, Sacramento, Fresno and Pasadena, Cal.

The English Motor Car Company is located in its new salesroom at 1132 South Grand avenue, San Francisco, Cal. The new quarters are as beautifully finished as any in that city. The company handles Stevens-Duryea cars.

The Central Auto & Supply Company, Waterloo, Ia., has moved into its large new garage at Sixth and Franklin streets. The machinery, supplies and other property have been moved from the old building opposite. The new structure is thoroughly equipped with all necessities.

The Cartercar Automobile Company, Omaha, Neb., has moved from 1113 Farnam street to the former home of the United Motor Omaha Company at 2115 Farnam street. The latter company has gone to 1122 Farnam street, formerly occupied by the Freeland Auto Company, and the Freeland company has moved to the place vacated by the Cartercar company.

The Lucia Bros. Motor Car Company, 218-220 North Adams street, Green Bay, Wis., has begun the work of removing a frame building in the rear of that now occupied by the company, and a concrete and brick structure will take its place. The first floor will be used for garage purposes only, while the second floor will be used for the service and repair departments.

The International Harvester Company, St. Louis, Mo., has leased the garage building at 3944-3946 Olive street as a sales and display room for automobiles and trucks. The building is in one of the automobile centres of St. Louis and was designed for such tenancy.

H. C. Metzger, Logansport, Ind., distributor of Ford and Overland cars, will soon occupy his new garage building at 111-115 Sixth street, which is rapidly nearing completion. The storage space is 11,000 square feet and the up-to-date repair department will be in the capable hands of Arthur Grund.

C. E. Wright & Co., Norfolk, Va., for a number of years located on Monticello avenue, has moved into its new building on the same street. The structure is three stories high and contains excellent appointments for the various departments.

The Locomobile Company of America, Pittsburg, Penn., has plans under way for alterations to its garage to cost $3000.

The Birmingham Motor Company, Birmingham, Ala., has started the erection of its new garage building at 20th street and Avenue F. It will be two stories high and thoroughly equipped.

The Edison Electric Illuminating Company, Crescent and Montello streets, Brockton, Mass., has opened its new

Digitized by Google

garage at that address. The plant contains room for storing the several electric vehicles and trucks of the local company and is equipped to give public service to electric vehicles of all kinds.

Wilson & Griese, proprietors of the Crescent garage, Goodsell and High streets, Evansville, Ind., have occupied their new garage and repair shop.

The Studebaker Automobile Corporation, Atlanta, Ga., has moved temporarily into 324-326 Peachtree street, awaiting the completion of its handsome new building at Harris and Peachtree streets.

The Binghamton Motor Car Company, Binghamton, N. Y., has had its offices enlarged and altered to meet its increasing business. During the alterations the firm occupied temporary offices.

The Locomobile Company of America, distributor of Locomobile cars on the Pacific Coast, has been forced to move from its palatial quarters on Fulton street, San Francisco, Cal., to make room for the new civic centre. The company has contracted for a new building on Fulton street, west of Van Ness avenue. It will be four stories high, of heavy reinforced concrete and will be treated in the mission style of architecture.

Howard L. Lamprey has occupied his new garage, to be known as the Firestone garage, on West Central street, Manchester, N. H. It is equipped for all kinds of work.

The White Company, Boston, Mass., has under construction one of the largest and best equipped motor car and motor truck establishments in New England. It will be located on Commonwealth avenue and will contain every modern appliance known to the automobile industry.

The Glenwood Garage Company, Riverside, Cal., is completing improvements to its plant on Seventh street and it will be a model in southern California when finished. Seven departments will be provided for, the blacksmith and forging, painting, top making and upholstering, nickel plating, vulcanizing and electrical, besides the offices and sales departments. The nickel plating, vulcanizing and electrical departments are additions to the plant.

David Reid, proprietor of the Reid Auto Company of Kalamazoo, Mich., who has a garage at South Haven, Mich., has leased from M. T. Vanden Bosch the new garage on the site of the Bridge Street House, Michigan street and Bond avenue, Grand Rapids, Mich.

J. H. Burns & Son, Janesville, Wis., agents for the Commerce trucks and the Cartercar pleasure vehicles, is building a garage on Prospect avenue. Room will be provided for a repair department and competent help will be kept at all times to care for its lines.

The Janesville Motor Company, Janesville, Wis., has in process of construction a new garage and service building, which will embody every feature in modern garage service. Many special features of repair work will be cultivated. The company handles the National, Overland, Rambler, Cutting, Borland electric, Stutz, Chevrolet, Little, Herreshoff and Stanley steam pleasure cars, and Jeffery and Service motor trucks.

The Howard Automobile Company, Portland, Ore., has moved from Broadway and Couch street to 14th and Davis streets, which location formerly was occupied by the Becker Automobile Company, now removed to 14th and Burnside streets.

The W. E. Bell Auto Company, Little Rock, Ark., has installed a complete charging plant in its garage, which will be under the direction of Wardell Jukes, a factory expert.

The Advance Garage Company has leased the recently completed two-story garage at 672-680 Woodward avenue, Detroit, built by the Caille Realty Company, the rental being $6000 a year. Several parts of the building have been sub-leased to other concerns.

The Down Town Garage, 1418 Howard street, Omaha, Neb., which has been in course of construction, has been occupied by R. M. Harris, who will manage the business.

The Twin City Motor Car Company, St. Paul, Minn., northwestern distributor for Saurer, Mack and Modern trucks, and the complete line of Maxwell cars, recently moved into its new quarters, 163 West Sixth street, where one of the finest garages in that city is located. The service department is now fully complete and the company is easily able to care for its trade. Gustav Michaud is in charge of the pleasure car sales, while A. F. Williams handles the truck department.

The Alsten & Goulding Company, Foster street, Worcester, Mass., has installed a manufacturing plant devoted to the making of inner sleeves and linings for pneumatic tires and other tire equipment.

Black & Robbie, Dallas, Ore., distributor for Overland cars, made by the Willys-Overland Company, Toledo, O., has occupied a new garage on Main street, recently erected at a cost of $2000 by George Clanfield.

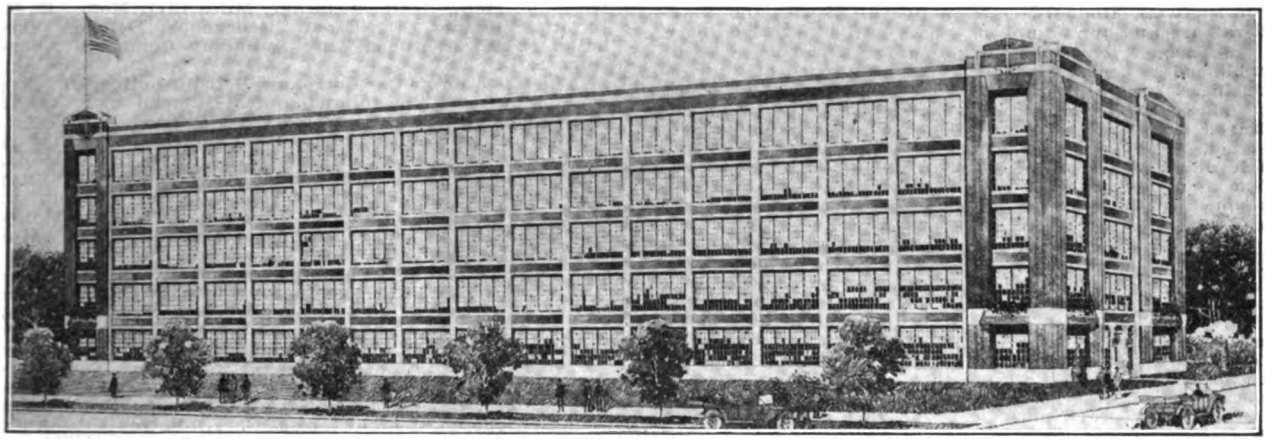
The Salt Lake City Auto Exchange, Salt Lake City, Utah, is having a modern garage erected for its use. The latest appliances will be installed.

The Nebraska Cartercar Company, Omaha, Neb., has located in its new home at 2115 Farnham street.

West & Postler is making improvements to its garage on South Main street, Rochester, Minn. The company handles the Michelin tires and other accessories.

The Collins Garage, 22d street, Omaha, Neb., has increased its facilities for handling an augmented business.

Gray & Davis, Boston, Mass., has prepared plans and is having erected in Cambridge a handsome modern factory building, five stories high, 381 feet six inches long by 81 feet wide on the first floor and 61 feet wide above that. The design has been prepared with a view to permitting additions in the future. An accompanying illustration presents a general view of the plant, which will be so constructed that nearly 70 per cent. of the wall area will be of glass, using steel sash. There will be a large showroom on the first floor and the offices will be located on the second, occupying the full width for a length of 200 feet. The entire building will be modern in every particular.



New Factory Building Now Being Erected in Cambridge, Mass., by Gray & Davis, Boston.

The Schad Garage, Benwood, W. Va., has moved into its new garage, which was recently completed. The establishment is modern throughout.

The American Garage, South Orange street, El Paso, Tex., is to undergo extensive improvements and enlargement.

The Elliott Auto Supply Company, Great Bend, Kan., has moved into new and commodious quarters on Williams street.

H. C. James of the James Automobile Company of Ogden, Utah, has announced that his firm will erect a new garage, which will be equipped with a complete repair department.

The New Berne Garage Company, New Berne, N. C., is planning improvements to its garage building.

The Automobile Supply Company, Racine, Wis., is to occupy a new garage which is now in course of construction.

The Barton Motor Car Company, Janesville, Wis., is having a new garage built, which will be occupied as soon as completed.

The Jackson Boulevard Garage Company, Chicago, distributor for Michigan machines, made by the Michigan Motor Car Company, Kalamazoo, Mich., is now located in its new service building at 1303 Jackson boulevard.

The Meyer-Busch Motor Car Company, St. Louis, Mo., has leased the building at 2005 Locust street and will locate its business at that address.

The Consumers Auto Supply Company, Pittsburg, Penn., has moved into new quarters at 302 Wood street, from 412 Diamond street.

Vick Bros., Salem Ore., has opened its new, modern garage at 260-274 High street, opposite the city hall. A first class repair shop and service station will be main-

Digitized by Google

tained and care will be given to all makes of cars. Vick Bros. handles the Ford car exclusively and the northwest room of the new building will be occupied by Chamberlain Bros., which has the agencies for the Cole car and the Menominee truck.

John and Robert Gilbert, proprietors of the Imperial garage, Jacksonville, Fla., are building a new garage on Laura street, which will contain a modern repair shop.

The Brown Car Corporation, New York City, distributor of Brown trucks, made by Brown Commercial Car Company, Peru, Ind., has opened offices in the United States Rubber Company building. The members of the company are Harry W. Torney and W. P. Fargo. They were formerly in business at 52 William street and have a salesroom at 2000 Broadway.

The New York Selling Branch of the De Dion-Bouton cars, of which Emanuel Lascaris is the head, has moved from 51st street and Broadway to the northeast corner of 52d street and Broadway.

The United New York Company is now settled in its new quarters at 1932 Broadway, New York City, with a full line of Columbia cars. The new salesroom is one of the most attractive in Broadway and the service department, extending through to 65th street, is modern and fully equipped in every respect. R. L. De Lisser, as manager of the company, continues in full charge of the new Columbia home.

The Elizabeth Automobile Company, North Broad street, Elizabeth, N. J., is causing the erection of a substantial addition to its plant to cost $4100. Work has been started and will soon be completed.

The Detroit Auto Exchange has opened quarters at 676 Woodward avenue, Detroit, instead of at 292 Jefferson avenue, as at first intended.

The United Motor New York Company, New York City, has taken 20,000 square feet of floor space in the Galvin building at 18th street and East avenue, Long Island City, N. Y., for a service station. The latter can easily be reached by way of Queensboro bridge. Repair parts for Maxwell, Stoddard-Dayton, Brush, Everitt and Flanders cars and for Sampson trucks will be carried there.

Johnson & Iverson Auto Company, Kiron, Ia., has established a repair shop in connection with its garage business.

The Schrup Motor Car Company, Dubuque, Ia., has leased four sections of the Conolly building on Seventh street, to be used as a salesroom for Premier, Locomobile and Studebaker pleasure cars and G. M. C. trucks. The four sections will be converted into one spacious room and the company will add a complete line of tires and supplies.

The Pittsburg Motor Service Corporation, Pittsburg, Penn., has opened a magnificent storage depot building, completely equipped for the care and maintenance of trucks, an institution that was badly needed in that city. Many business men failed to install motor equipment because of lack of storage facilities, but so fine an impression has the new building made that many of those already operating machines are said to be contemplating doing away with their private garages and availing themselves of its service. Pleasure cars can also be left there during the day instead of parking along the city curbs.

The Merwin Gasoline Company, Pittsburg, Penn., which was recently granted a state charter, has awarded the contract for the building of its new home in Grant boulevard, near Thirty-third street. The building will cost $3500. A large plot of ground was purchased and the unused portion will be held to await further development.

Louis Jandorf, dealer in second hand cars, has taken a lease of the United States Motor Company building on Sixty-first street, near Central Park West, New York City, and will combine his various establishments under one roof. The building has seven stories, each floor being 200 by 75 feet. It is understood that the annual rental is about $40,000. This deal, coupled with the fact that the Times Square Automobile Company not long ago took over and remodelled the Wyckoff, Church & Partridge building at Fifty-sixth street and Broadway, is significant of the importance of the second hand automobile business. Jansdorf's former place has been taken by the Cadillac company, which will have its salesroom diagonally across the street on the Broadway corner. The factory at Fifty-eighth street and Eleventh avenue has been taken by the United States Rubber Company.

C. W. Robinson has completed extensive alterations to his Cole service station and electric garage at Peoria, Ill., making it one of the most modern automobile homes in the state outside of Chicago.

The Metz Company, Waltham, Mass., maker of Metz cars, is erecting a new factory which will have 55,000 square feet. It will be completed and ready for occupancy in June. It will be modern in every way, being built of concrete and glass, making it as sanitary as possible. With the additional equipment the Metz Company will be able to turn out 50 cars a day, whereas 25 is the output at present.

The Cole Motor Car Company, Indianapolis, Ind., maker of Cole cars, will erect an addition to its plant to cost $150,000. Work will begin at once and the plant will be ready for occupancy by Oct. 1.

NEW AGENCIES.

The Johnson-Gewinner Company, Atlanta, Ga., agent in that city for the Motometer Company, Inc., 1784 Broadway, New York City, maker of radiator heat indicators, has had its territory extended to cover Georgia, Florida, Louisiana, Alabama, Mississippi, Tennessee, Kentucky, North and South Carolina and West Virginia.

William J. Meyers & Co., Baltimore, Md., has closed a contract with the Jackson Automobile Company, Jackson, Mich., maker of Jackson cars, to distribute that car in Baltimore and vicinity.

PROPOSED NEW GARAGES.

The California Motor Company, Los Angeles, Cal., will erect a large, modern garage building on 10th street.

The E. & H. Garage Company, Sheboygan, Wis., will occupy a new garage building which is to be erected on North 10th street by William Beerman.

George Brown, Volga, S. D., has purchased property on which he will erect a modern garage. In addition to having an up-to-date repair shop he will carry a full line of accessories and supplies.

The Burns-Ransden Motor Car Company, St. Louis, Mo., has plans for the erection of a modern garage and repair shop at 5035 Delmar avenue.

M. Larrabee, manager of the Tenney Service, Montpelier, Vt., has plans for a new fireproof garage near Langdon avenue.

The J. W. Maguire Company, 745 Boylston street, Boston, Mass., agent for the Pierce-Arrow line, is to have an automobile repair shop erected on Charles River Parkway, for which plans have been prepared.

The National Motor Vehicle Company will build a large addition to its building on 22d street, Winnipeg, Can.

H. E. Huntington, owner of the large Huntington hotel at Oak Knoll, Los Angeles, Cal., recently completed, has plans for a garage to cost $75,000 and which will have a capacity for housing 100 cars.

The Miami Cycle Manufacturing Company, Middletown, O., maker of Flying Merkel motorcycles, has secured the Prest-O-Lite building at Indianapolis, Ind., for an auxiliary factory to the already large plant at Middletown. The announcement was made by K. R. Jacoby, president and general manager of the concern, and it came somewhat as a surprise, despite the rapid growth of the Miami company, which has been one of the notable features of the motorcycle industry. In January the company occupied its new concrete and steel building, the addition embracing 55,000 square feet of floor space, but this extra room was insufficient for its operations. The building at Indianapolis has just been vacated by the Prest-O-Lite Company, which has acquired a new and larger plant near the speedway. The motorcycle concern will use it for the production of complete motors, two-speed gears and band brakes. These will be the only items manufactured at the Indianapolis plant and in order to take care of the work President Jacoby has let the contracts for $100,000 worth of new machinery. The Indiana factory will be in charge of C. S. Barkelew, who has been engaged as mechanical engineer and 800 men will be employed there. It is planned to have the new factory in operation by Aug. 1, when the 1914 models of Merkel motorcycles will be ready for the market. The output of the company for 1914 will be 25,000 machines.

Indianapolis Auxiliary Plant Acquired by Miami Cycle & Manufacturing Company.

The Blue Ridge Motor Company, 62 South Main street, Asheville, N. C., will erect a modern garage. The company handles the Marathon cars, made by the Marathon Motor Works, Nashville, Tenn.

Sewell N. Stevens, 598 Main street, Worcester, Mass., has secured land in Essex court and will erect a large, modern garage, to be occupied by the firm of Terrell & Stevens.

The LaFrance Motor Car Company, Elmira, N. Y., has plans for the erection of a new garage in the central part of the city.

A. J. Keys, Marshall, Mo., has purchased land on North street and will have a garage erected. It will be equipped with modern appliances.

The Bekins Spears Motor Company, Los Angeles, Cal., agent for Lozier and Abbott-Detroit cars, will occupy a large, modern garage building which will be erected at a cost of $50,000.

W. R. Chamberlain, Wabash, Minn., is to have a large garage erected on Main street, to be modern in every detail.

The Western Motor Car Company, Los Angeles, Cal., has made arrangements with Charles E. Anthony for the erection of a four-story building, which the company will utilize for its headquarters when completed.

A. H. Bannon, Portsmouth, O., is to erect a two-story garage, 88 by 100 feet, at a cost of $12,000. Upon completion it will be occupied by R. S. Pritchard.

A. Pinchot, 60 Broadway, New York City, has had plans drawn for an 11-story garage building to be erected at 61st street and Columbus avenue.

Rusk & Remster, Hoopeston, Ill., has broken ground for a modern brick garage near the company's present automobile works, on Market street.

The Sioux Rapids Auto Company, Sioux Rapids, Ia., is to have a large garage erected in that city. The company handles the Studebaker and Cole cars.

John R. Heater and F. L. Smith have formed a company at Mandan, N. D., to establish a garage, for which a new building will be erected.

The Atlantic Garage Company, 32 Hampton place, Brooklyn, N. Y., has plans under consideration for a one-story garage to cost $7500.

E. G. Whitman, 2209 Venango street, Philadelphia, Penn., is having a garage built at Cynwyd, Penn.

Steven Gyrfas, 12 Frelinghuysen avenue, Newark, N. J., is to build a two-story garage and machine shop at a cost of $5000.

Frank E. Clayton, Montclair, N. J., will expend $4000 in the erection of a one-story garage and shop, 40 by 46 feet.

S. Rosenbaum, 17 Speedway avenue, Newark, N. J., will build a one-story garage at East Orange, N. J., at a cost of $5000.

White Motor Car Company, Newark, N. J., is having plans prepared for a two-story garage.

John J. Stanlar, First avenue and Delaware street, Elizabeth, N. J., has plans for a one-story garage to cost $2000.

J. Lebourts, 46 Baldwin avenue, Newark, N. J., has let the contract for the erection of a new garage in that city.

Franz Pere, West Hoboken, N. J., contemplates erecting a two-story garage, 46 by 100 feet, to include living quarters and a paint shop. The cost will be $7000.

THE ACCESSORY AND GARAGE JOURNAL
Devoted Exclusively to the Automobile Trade and Allied Interests

VOL. III. MAY, 1913. NO. 1.

AUTOMOBILE JOURNAL PUBLISHING CO.
Times Building Pawtucket, R. I.
William H. Black, Treasurer. D. O. Black, Jr., Secretary.

Publisher of
THE AUTOMOBILE JOURNAL THE MOTOR TRUCK

Offices in New York, Chicago, Detroit and Boston

SUBSCRIPTIONS:

The United States and Mexico, the year, $1 in advance; Canada and Foreign Countries in Postal Union, the year, $2 in advance. Fifteen cents the copy.

CONTRIBUTIONS.

Anonymous communications not considered. Correspondence on subjects relating to the motor industry and the trade will receive attention. Stamps must be enclosed to insure return of unsolicited contributions.

ADVERTISING:

Information supplied at request.

Advertising Copy for the ACCESSORY and GARAGE JOURNAL requiring submission of proof must be received by 5th of month to insure publication in issue of the 15th of month.

Advertising Copy, proof not required, accepted to morning of the day before publishing day (unless such day is Sunday or holiday, when previous day is limit) of each publication.

Entered as second class matter Dec. 30, 1911, at the postoffice at Pawtucket, R. I., under the Act of March 3, 1879.

THE USED CAR PROBLEM.

The automobile dealers of St. Paul, Minn., like those of other cities, have been confronted by the problem of disposing of used or second hand cars, but they recently formulated a plan which they believe will be effective. It is suggested that all the dealers join in purchasing a garage which merely will be the distributing point for second hand machines and this is expected to relieve the situation materially.

Many dealers refuse to consider taking a used car other than the make which they handle, while others will accept machines of any make, provided they are in good condition, and thus accumulate a large supply of second hand cars. Salesmen naturally do not desire to talk about the merits of the machine made by another company, at least while the prospect of disposing of a new vehicle at first hand is even remotely possible.

Should the plan to establish a garage in which all the St. Paul dealers will be interested, be carried out, a unique innovation in the matter of selling used cars will have been inaugurated. The idea will be to let the public know that a large line of second hand vehicles is open to inspection, a customer to have his pick from the assortment. It is believed that a larger number of used cars will be disposed of than at present. The plan will be watched with interest by the trade and it at least has the merit of an experiment that is worth trying.

GARAGE DISPLAYS.

Too much importance cannot be attached to the display of stock in a garage where such facilities are available. Many garage owners apparently have given the subject but little thought and have placed in their windows such articles as might happen to be handy, thereafter leaving them on perpetual display.

This gives an establishment an appearance of stagnation to one who has occasion to visit it frequently. It is undeniable that variety and seasonableness lend an atmosphere of progressiveness to a business place and it is just as certain that the public is ever seeking new things. Therefore, it would be well if a garage owner changed his display quite often, bearing in mind the season of year and giving preference to new things of merit which he may have added to his stock. They attract attention and consequently trade is given an impetus that might otherwise be lacking.

REPAIR SHOP EQUIPMENT.

While considering various methods and systems making for greater efficiency, it would be well not to neglect the matter of repair shop equipment. Upon this depends a large share of the success in handling difficult jobs. It is not always necessary to have an elaborate and expensive equipment, but stress should be laid upon securing serviceable tools that are of every day utility.

A workman can perform good work with good tools and makeshift apparatus will rarely, if ever, meet requirements. Machinery should be arranged with an idea of conserving space and none should be purchased for the moderate sized shop which is used only once or twice a year. Extremely intricate jobs, which are so infrequent as to require a certain tool at long intervals, can with more profit be taken to a large shop for treatment and the money invested in an expensive piece of apparatus saved. If such tools as are of constant necessity are purchased with regard to quality, they will last long enough to pay for themselves, while a fair workman can turn out better work with them than can a first class mechanic with mediocre equipment. For this reason machinery that costs slightly more at first cost is infinitely preferable to cheap equipment.

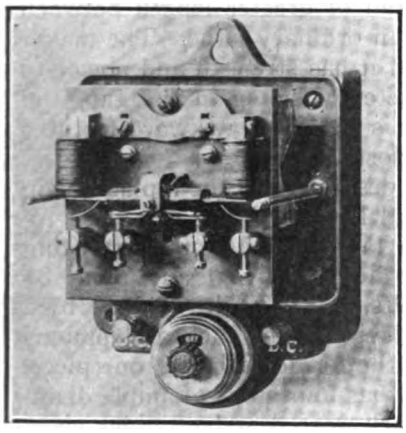
WESTINGHOUSE RECTIFIER.

A number of small garages have customers utilizing storage batteries for ignition or lighting and when the car is not equipped with a dynamo these must be sent to a charging station unless the garage has a charging panel. The amount of such work does not warrant the installation of a large panel, consequently when attention is needed the batteries are carried to the nearest service station.



Westinghouse Type G Vibrating Rectifier.

The Westinghouse Electric & Manufacturing Company, East Pittsburg, Penn., is producing what is termed its type G vibrating rectifier, designed for charging three-cell lead batteries from an alternating current circuit. The rectifier can be operated on any 60-cycle alternating current lighting circuit of 100 to 120 volts, and will charge three cells at a rate of six to eight amperes. The apparatus is simple to operate, requiring no other attention than connecting the attachment plug to a lamp socket and the lower binding posts to the battery. Polarity need not be observed. The interruption of the flow of current does not interfere with its operation as the rectifier will restart as soon as the power comes on again. This makes for convenience, especially when the cells are to be charged during the night.

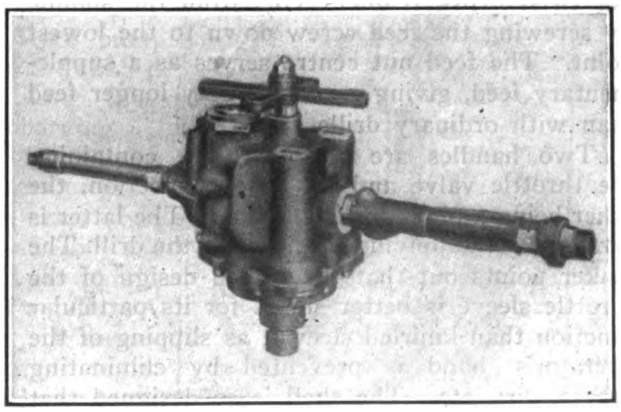
The rectifier shown in an accompanying illustration consists practically of a polarized relay acted upon by two alternating current magnets, so that it vibrates in synchronism with the alterations of the current, and arranged to reverse the connections of the circuit as the current reverses. The vibrating arm is magnetized by current from the direct current side, so that one end is permanently north and the other south, depending on which way the battery is connected. When the alternating current is in one direction the upper poles of both stationary magnets are north, attracting the south end of the vibrating arm and repelling the north end. When the current reverses, the poles of the magnets become south, attracting the north end of the vibrating arm and repelling the south end. This reverses the connection of the alternating current to the direct circuit, but as the direction of current has also been reversed, it flows into the direct current circuit in the same direction as before. The reversal of the connections thus takes place every time the current reverses, so that the result is a pulsating direct current. A transformer reduces the voltage to the proper value.

Five feet of lamp cord and an attachment plug are furnished, and six feet of similar cord with connecting clips for use between the battery and the rectifier, also a snap switch.

LITTLE DAVID PNEUMATIC DRILL.

Little David pneumatic drills are manufactured by the Ingersoll-Rand Company, 11 Broadway, New York City, and are designed to be operated by compressed air. That shown in an accompanying illustration is the No. 2, adapted for medium drilling, reaming, tapping, etc., and is fitted with a No. 3 Morse taper socket and .6875-inch square tap socket. Simplicity and interchangeability of parts are features emphasized in the tool, also convenience in handling and control.

The motor or engine is of the angular, four-cylinder, single-acting, reciprocating type, each



Little David Pneumatic Drill Which Is Held to Possess Many Advantages.

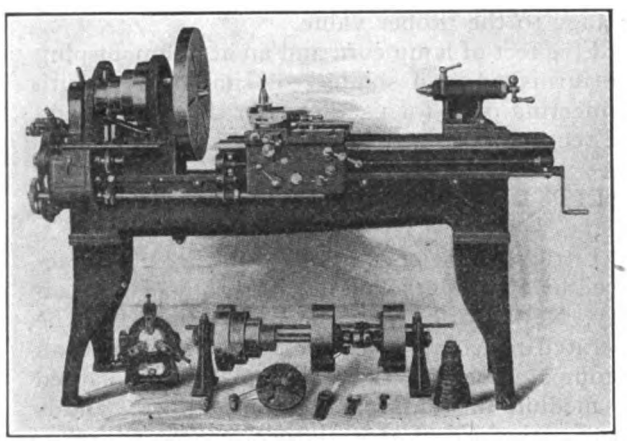
pair of pistons being attached to opposite throws of a double crankshaft, each acting in balance, insuring smooth running. The drill is built reversible, but may be made non-reversible by simply

Digitized by Google

inserting a small pin in a hole provided in the throttle handle. The valve action is such that there is no compression of exhaust, no matter which way the drill is operating.

The valves are geared to the crankshaft through the medium of a spindle gear and live air is admitted to the pistons alternately through two valves, one set of pistons being under compression while the other two are exhausting. The air enters a port in the throttle handle and travels to two ports. As the crankshaft revolves it in turn rotates the main gear to which the valves are geared and connects ports permitting the air to pass into a cylinder. Both cylinders take air for 120 degrees of the stroke. The piston also uncovers an exhaust slot in the side of the cylinder, allowing the drill to exhaust directly to the atmosphere.

High grade material and workmanship are incorporated and the crankshaft rotates in F. & S. ball bearings of liberal size. The spindle is provided with a thrust bearing interposed between the shell and feed spindle. It is machined to receive standard Morse taper shanks and is threaded on the end so that chucks or other special attachments can be utilized. An ejector pin is provided with the feed screw attachment for ejecting twist drills, reamers, etc., from the spindle by screwing the feed screw down to the lowest point. The feed nut centre serves as a supplementary feed, giving a considerably longer feed than with ordinary drills.



Barnes 14 to 24-Inch Sliding Extension Gap Lathe, Constructed with Self-Contained Motor Drive for Utilizing Electricity.

Two handles are provided, one containing the throttle valve and air hose connection, the other being a plain or dead handle. The latter is arranged for supplying lubricant to the drill. The maker points out that the ribbed design of the throttle sleeve is better suited for its particular function than knurled sleeves, as slipping of the operator's hand is prevented by eliminating grease, dirt, etc. The shell is so designed that the entire motor apparatus is assembled or disassembled through the crankcase by the removal of the cover. The company will forward a booklet on its drills upon application. This publication is suitably illustrated and contains information of numerous types of drills manufactured.

BARNES LATHE.

There is a growing tendency to utilize electricity for power in the repair shop, as this form of energy is very convenient where there is no line shaft and where current is available. The Barnes Drill Company, Rockford, Ill., is manufacturing a 14 to 24-inch sliding extension gap lathe which is especially adapted for automobile and general repair work, and one of its features is a self-contained motor drive.

The lathe is sturdily constructed, will handle a wide range of work and is provided with six quick change geared feeds. The spindle is of ample size, being 2.9375 inches in the front bearings and has a 1.5625-inch hole in it. The sliding bed top is valuable for general repair work in that it allows the swinging of pieces of larger diameter through the gap and of greater length between centres than with an ordinary lathe. The maker also points out that it has strength and power to turn the full diameter of swing in the gap, and at the same time it is free from awkward features when the gap is closed.

The bed is well designed and the top and main beds are planed full length. They are fitted together by a dove tail construction, permitting the top bed to be held firmly at any point by means of clamp bolts, and to be drawn back by a screw and crank device. The rack and pinions are cut from steel, the former being in one piece.

The cone pulley has four steps of ample diameter, is strongly back geared and provides eight changes of speed. A push pin on the head gear allows the cone to be locked or unlocked without the use of a wrench. The tail stock is of the offset type, allowing the compound rest to set parallel with the bed, and has set-over adjustment for taper work. The compound rest has a graduated base and has sufficient travel for the largest capacity of the lathe.

EASTERN RUNABOUT OUTFIT.

The Eastern Oil Tank Company, Lowell, Mass., is marketing a runabout outfit for service in garages and for filling car tanks with fuel from the sidewalk. The tank is cylindrical in shape, sturdily constructed and the wheels upon which it rolls are located underneath. They are of the swivel type, ball bearing and are fitted with rubber tires.

The tank is equipped with a pump having a dial indicating the amount of fluid discharged, and one turn of the crank registers one-half gallon. The equipment includes nine feet of one-inch flexible hose which is provided with a shut-off cock. The capacity of the tank is 60 gallons. Complete specifications will be forwarded upon request.

To temper steel very hard, take water, four parts, and salt, two parts, mixed to a paste. Heat the steel until a coating adheres when dipped into the mixture. Next heat to a cherry red and cool in cold, soft water.

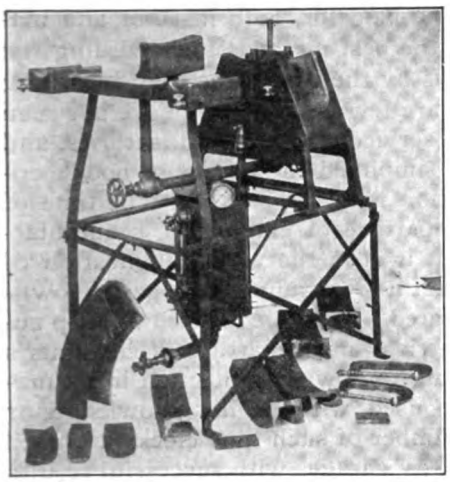
VANDERPOOL VULCANIZERS.

Vulcanizers embodying the latest improved patents for the treatment of inner tubes and shoes are made by the Vanderpool Company, Springfield, O., which produces apparatus adapted to all kinds of vulcanizing, from the mending of small punctures to the repair and installation of sections in tire casings.



Standard Vulcanizer Made by the Vanderpool Company, Springfield, O.

An accompanying illustration shows the standard vulcanizer made by the company and as can be noted molds of various sizes are provided for the treatment of the smallest as well as the largest tires. These machines are constructed so that steam or gas flame can be utilized to secure the necessary heat, according to the desires of the purchaser. Work on ordinary punctures and breaks can be done expeditiously and at small cost, which the maker claims to be one of the strongest features of the apparatus.

The Van steam portable vulcanizer, made to repair tires without removing them from the rim, when the damage is light, is a noteworthy specialty of the company. It is sold at an extremely low price and is a labor saving device that recommends itself highly to garagemen as an indispensable auxiliary to the main vulcanizer, adding materially to the efficiency of the equipment. The standard vulcanizer is also provided at reasonable prices, and the high grade of workmanship and material contribute to its durability in service.

HARDY RATCHET WRENCH.

A wrench operating upon the ratchet principle is the Hardy, being marketed by the Hardy Manufacturing Company, Pendleton, O. It is an all steel tool having five parts, these comprising a handle, two side plates, a ratchet socket and a rivet. The latter is employed to secure the side plates to the handle.

The Coes Wrench Company, Worcester, Mass., is the maker of all-metal wrenches for the repair shop which possess strength without clumsiness, a quality which has found favor among workmen owing to the ability of the tool to withstand severe usage. Instructive literature concerning these wrenches will be forwarded upon request.

DETECTORPHONE.

An instrument for locating mysterious knocks or noises by an adaption of the microphone principle is being produced by the Boston Talking Machine Company, 41 West street, Boston. The device comprises a receiver, similar to that employed by telephone operators, and the phone member. The latter is provided with a microphone button, changing the position of which is held to magnify the sound through the vibration travelling up the rod through the button, thence to the receiver and the ear.

J. M. MOBILENE PACKING.

The H. W. Johns-Manville Company, New York City, is marketing the J-M mobilene sheet packing which is designed for service where extremely high temperatures are encountered, such as at the exhaust manifold, etc. The packing is constructed of asbestos with fine brass wires intertwisted in each strand. It does not burn or char and one side is graphited. It is pliable, easy to cut, and being compressible makes for a tight joint. It comes in rolls 40 inches wide and .03125 thick.

EASTERN RUNABOUT FUEL OUTFIT.

The Eastern Oil Tank Company, Lowell, Mass., maker of oil and gasoline storage systems, tanks, cabinets, etc., is manufacturing the Eastern runabout system, especially designed for service in garages. As will be noted by an accompanying illustration it is of the portable type and being fitted with ball bearing, rubber tired wheels, may be moved easily about the garage and even to the sidewalk. The wheels are of the swivelling type, mounted beneath the tank proper and suitable handles are provided. Its capacity is 60 gallons.

Eastern Runabout Gasoline Outfit.

The pump is of the double-acting type, discharging a continuous stream of gasoline and one turn of the crank pumps half a gallon. A dial is incorporated, registering accurately the amount of fuel discharged, and the discharge nozzle is well adapted to any type of fuel tank. It is also fitted with a shut-off valve, preventing waste from overflowing.

TIME CLOCKS IN SERVICE STATIONS.

Methods of Utilizing These Recorders in Connection with Repair Shop System—Registering Employees' Time and Arrival and Departure of Cars.

SERVICE stations and garages present many problems to their owners in the matter of maintaining the business on a basis of efficiency and it requires considerable ability to eliminate the possible leaks. There are many places where these are liable to occur and a proprietor must pay close attention to his business details to devise ways and means to prevent them. Frequently, the expenditure of a little money at the outset will enable a garage owner to save many times the amount originally laid out, by simply stopping leaks here and there that would doubtless cause a considerable loss in the course of a year if they were allowed to continue undetected.

Fig. 1—The Cincinnati Time Clock Recorder.

Too often business men that are accounted shrewd in other ways, are lamentably lacking in that quality when they consider suggestions for installing apparatus or system that will make for better efficiency in their establishments. They are somewhat inclined to lose sight of the fact that such outlay will return itself two-fold in dividends saved, and to pay more attention to the immediate expenditure.

However, to approach the subject logically, a garage man should remember that it is as important to retain customers as it is to secure them in the first place. Good workmanship is not the sole requisite. Once a car owner becomes possessed by the idea that he is being overcharged for work done on his machine, it is a difficult matter to disabuse him of the notion. Indeed, he may become so strongly obsessed with the opinion that he will take his trade elsewhere.

It would be well in the first place if the garage owner installed a system which would record the time at which work on a given job was begun and ended. Then he would be in a position to show the owner that the latter was receiving exactly what he paid for, both in labor and material. One of the best methods for recording the time of labor is by the use of the time recording clock. There are few persons who have not seen such clocks in service in offices and factories, and it has greatly simplified the matter of bookkeeping in connection with the payroll. The time of arrival and departure of employees is automatically kept, but it is in the varied application of such a clock that its real value to the garage owner is demonstrated. It can be utilized to keep account of the arrival and departure of customer's cars, thus giving the owner protection if his machine is beng used without his knowledge or consent. A number of such time clocks are used in New York City garages with successful results and their cost is not excessive.

At Fig. 1 is shown the product of the Cincinnati Time Recorder Company, Cincinnati, O. It is known as the standard cost keeping machine, style 14, and has been designed especially for automobile garage uses. The mechanism contained within the polished oak case is operated by an eight-day Seth Thomas clock movement, and it is constructed to last an ordinary business lifetime. The length of the clock is 34.75 inches, the width

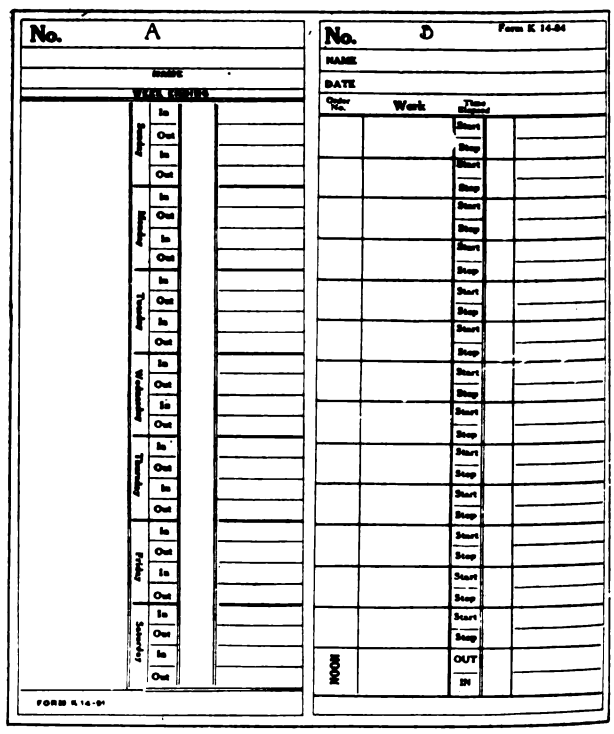

Fig. 2—Cards Used in Cincinnati System: A, Employee's Blank Stamped by Recording Device; B, Card Used for Keeping Track of Work.

15.75, and the depth eight inches. It is claimed to be entirely automatic and no shifting device of any kind is attached. It prints the day, A. M.

Digitized by Google

or P. M., hour and minutes, and a decimal wheel can be supplied in place of the minute wheel if desired.

The accompanying blanks show how the clock can be utilized. That at Fig. 2 A shows the employee's record card. On the obverse side provision is made for noting the time of arrival and departure of the workman for seven days. Thus it is possible for the proprietor to know exactly at what time the workman reported for work in the morning, went to lunch at noon, returned from lunch and left at night. It can be told at a glance whether the workmen are prompt and efficient. The loss of time on the part of garage employees is important. The possibility of losing a customer through inability to convince him that the entire time for which he has been charged was expended upon his car, cannot be overlooked.

Fig. 2 B presents the card utilized in keeping track of the work. When the repairman starts work on a job he runs the card through the clock, thereby securing an impression of the exact minute at which work was begun. If he is called to another job or leaves the work for any purpose, he first runs the card through the clock, then puts it in a case provided for the purpose, where it is readily accessible when he resumes work on this job, first having secured another impression of the time on the card. It is possible to utilize this card for one job or for several, as there is a space in which to insert the order number opposite the impressions of time at which work started and ended. It is better, however, to use but one card for each job, thereby securing a history of the work on that job, which can be filed in the repair envelope when the work is finished. It is then easily available for ready reference, either when the customer's bill is being made up or in case of an item being questioned. It can also be checked against other slips in the repair envelope to show accuracy in the accounts.

Garage owners have been troubled considerably in keeping watch of cars entrusted to their care, so that none but those entitled to use them shall do so. Here again the time clock can be utilized to advantage. No garage owner can be held responsible for damages resulting to a car while being driven by a person having no authority to use it except that gained by fraud upon the garage. Nevertheless, garage proprietors take great pains to protect the owner in this respect, for only by so doing is trade retained. Careless or negligent garagemen's success in business is shortlived. But while not assuming any responsibility for machines left in their care, a garage owner with a time clock in his establishment is in a position to render extremely valuable service to his patrons. The method is shown by the card at Fig. 3.

The card is divided into daily spaces, providing for the seven days of the week. In ordinary garages, experience has indicated that six trips a day is about the largest number required of a car. Each time the machine is driven out of the garage the card is slipped in the clock and a record is secured. This is repeated when the car returns. At the end of a week the record is submitted to the automobile owner, or it can be shown to him every day if desired. It is intended as a report, but the original card may be copied for a record to be placed on file, while the printed original is sent to the owner. In this way the latter knows when his car has been taken from the garage and how long it has been absent each

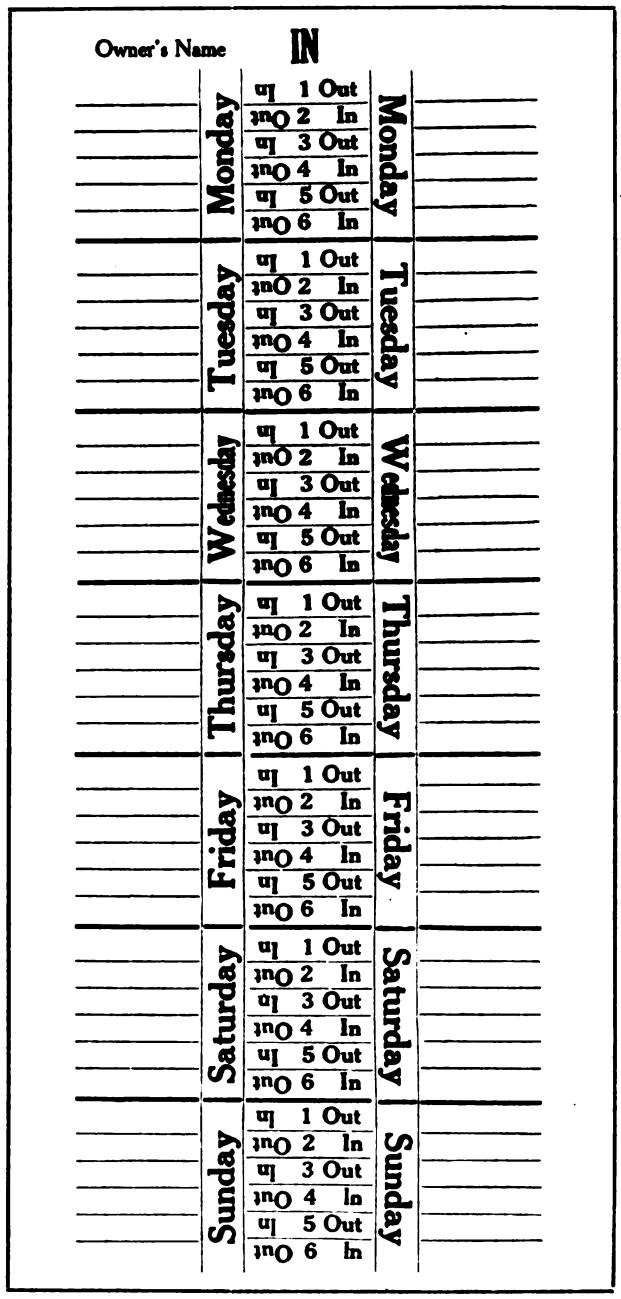

Fig. 3—Showing Card Used to Check the Arrival and Departure of Each Machine—Copy of Record Is Sent to Owner.

time. It is thus easy for him to detect whether it is being used illegitimately.

The form of this card can be changed to suit the garage owner's particular needs and in some instances a space is provided in which to record the speedometer readings when each car leaves the building and again when it returns. Thus not only is the owner apprized of each time that his car leaves the garage and the length of time

Digitized by Google

it is absent, but also the distance it has travelled in the interim. If the chauffeur is sent with the car to a certain point, the approximate distance to which is known, the owner can tell, with the aid of the garage system, whether his employee has enjoyed any side trips en route. The time elapsed upon the journey will also tell him how fast his car has been driven, thus indicating whether it is being properly handled.

The duty of taking the records of the departure and arrival of cars, naturally devolves upon an employee of the garage, since the effectiveness of the system would be destroyed were the owner or chauffeur given the privilege of making records. This duty is generally performed

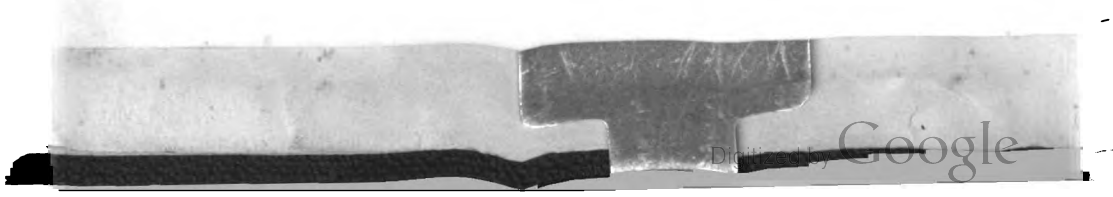
by the bookkeeper or the young woman who attends to the telephone exchange, where such convenience is operated. With this system in use it is seldom that a chauffeur takes the risk of borrowing the car for a joy ride, so-called, and if the report indicates that he is in the habit of taking more time than is necessary to deliver the machine to the garage, the owner is notified and the possibility of a damaged automobile is minimized.

Of course most garage owners supplement the time keeping clock by a secondary system of keeping account of repair jobs in the matter of stock and parts used and the nature of the work performed. This can be accomplished by a suitable system of cards which can be filed and checked up every day, each card acting as a voucher for the others. Assuming that the workman has reported for duty and registered his time on the time clock, he is confronted by a repair job which is numbered 18 on the service tag, as shown at Fig. 4.

Upon this card, the color of which is red, is placed full instructions as to the work required to be done. The employee takes a card similar to the one shown at Fig. 2 B and after inserting the number 18 in the space provided for the order number, he places the card in the clock and secures an impression of the time at which he started work on the job. Accompanying the repair service tag is a second tag upon which are provided spaces for recording orders for supplies and other work not specified on first tag. This card is white and is shown at Fig. 6. It is an indispensable convenience in quickly recording orders of transient owners. When the latter enter the garage and order gasoline, washing, polishing or storage, an X mark is placed in the space immediately opposite these items. In the wider space the amount of the order is placed, or the length of time in the case of storage, with the amounts charged against each in the spaces at the extreme right of the card. These items are quickly and easily transferred to a completed bill which is given to the customer as a receipt for payment, the service tag being filed away in an alphabetically arranged index so that it is easily accessible for reference at any time.

While a number of garages use the red and white cards, if it is desirable for purposes of economy to have them combined in one tag, the forms shown at Figs. 4 and 6, which are the same size, can be so made by having Fig. 6 printed on the reverse side of Fig. 4. This would perhaps be preferable as condensing the system into more convenient compactness. It will be noted that at the bottom of each tag there is a stub which bears the same number as is found at the top of the card. This stub is detached at the dotted line and given to the patron. When the latter appears for his car this stub is presented to the proper authority and the car is identified by the corresponding numbers on both cards. The entries upon the repair or supply tags show that the job has been completed, while the stock requisition blank gives the parts and stock that may have been used. These cards are taken to the office, where the completed bill is made up and presented to the owner, if a transient, or if a regular customer, the items can be placed upon the monthly account and the cards filed away in the repair envelope for future reference if needed.

If in the course of a job the repairman finds it is necessary to obtain stock, supplies and parts, he secures these necessities on requisition, the form of blank used being shown at Fig. 5. This requisition also applies to the sale of gasoline, oil



Digitized by Google

and other supplies, so that it is at all times possible to tell who made a sale and whom to hold responsible for the cash collected. Each requisi-

tion is made in duplicate, one being kept by the repairman and the other being retained in the stock department. The repairman's slip is placed in the repair envelope with the other tags at the conclusion of a job and can be compared with that kept in the stock department. The last named will at all times indicate the status of the stock on hand and an accurate estimate can be made of the cash taken in as compared with the amount of depleted stock. Each requisition must be countersigned by the foreman, who is held directly accountable for all stock and supplies. In charging up stock on repair work, account is taken of everything, including waste, cotter pins and other small goods.

The matter of the care of tools is no small one to most garages, for it has been demonstrated that unless some method of guarding them is in force, tools will be handled carelessly and be thrown hither and thither by employees. Oftentimes they will be lying conveniently at hand for anyone to use who may happen along, with the result that if a tool is broken the garage must stand the expense of a new one, while having no way of placing the blame upon anyone. An effective system to check this loss is found by the use of small, numbered brass checks. They are inexpensive and each employee is furnished with a suitable number of them, each bearing a number assigned to the workman. The tools are kept in the stock room under the charge of the foreman. Wrenches, bits, drills, etc., are kept in separate compartments and when an employee desires a wrench, for example, he gives the foreman a numbered tin check in return for which he receives the tool. The check is placed in the wrench compartment, and when the tool is returned the employee demands the return of his check. If a tool is lost and it is found that No. 22, for instance, has failed to return it, as evidenced by the tin check in the compartment, which shows that he borrowed it, he is requested to account for it. If he cannot, he must pay the price of a new one. This system has been found to create care and proper accounting of tools by employees and effectually stops a considerable source of expense to the garage.

It has also been found to inculcate in the employees a sense of business acumen. The return of a tool without receiving the tin check may prove costly, for should the tool afterwards be lost by another and the check is located, the workman would be charged for it nevertheless, his carelessness being to blame. One may be sure it will not occur again. This habit of care once contracted, extends to other branches of the work.

Numerous other seemingly minor matters may be taken care of in a similar manner, the net result of which is not only beneficial to the garage itself, but to the employees as well.

The system here outlined has been successfully tried by one garage and others are utilizing a similar method of account keeping with variations which will readily suggest themselves to a garage proprietor. The accurate keeping of employees' time and the safeguarding of the interests of the garage patrons is of moment and cannot be overestimated. The interests of the service station are also adequately protected and

NEW DAIMLER CARBURETOR.

ANNOUNCEMENT is made of a new Daimler carburetor, an English design, which presents interesting features in that there are

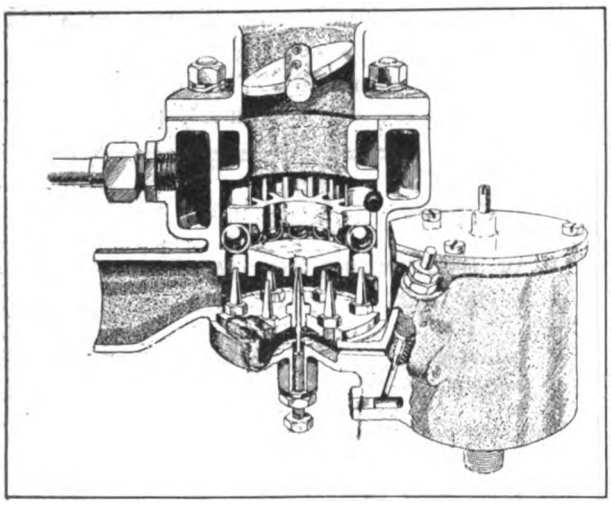

Fig. 1—Sectional Sketch of Daimler Seven-Jet Carburetor, Making for a Flexible Motor.

seven jets supplied with gasoline at a constant level from the conventional type of float chamber. A part sectional sketch of the vaporizer is shown at Fig. 1 and it will be noted that six of the jets are arranged in a circle with the seventh in the centre. The last named jet is utilized for starting and when the motor is operating at a slow rate of speed. Its opening is adjustable by a taper needle valve much in the same manner as with American carburetors, although with the Daimler provision is made for locking the adjustment by means of a nut. This prevents jarring loose of the low speed adjustment or tampering with it.

The main supply of gasoline from the float chamber to the fuel space below the multiple jets is also variable as to the quantity which can pass by another needle valve, adjustable in a similar manner as the starting needle member. The carburetor illustrated is designed for six-cylinder motors, and the needle is held off its seat normally by a spring, but is depressed by a contact lever, not shown in the drawing, which can be connected to the throttle lever or operated from the dash or other point convenient to the driver.

The arrangement of the six concentric jets is shown at Fig. 2 A and the utilization of the steel balls is similar to that employed by a well known make of American carburetor. The tip of each of the six jets in the Daimler is in its own choke tube, which is normally closed by a steel ball, this being lifted from its seat by the suction of the piston. There are also six air passages arranged alternately with the chokes, and each of these has a ball to close it normally. A bottom view of the choke tubes and air passages with their balls, and showing their arrangement in relation to the position of the central jet choke, is presented at Fig. 2 B.

Resting on all except one of the 12 steel balls is a spider weight with 11 arms, the 12th being represented by a gap past which one of the balls may be lifted by the initial increase of suction as the throttle is opened. In other words, when the motor is operating on the central jet and the throttle is opened one each of the balls covering a jet and choke tube has a lead over the others in responding to the increased suction. The remaining balls are lifted subsequently, but before they can rise the weight of the spider must be overcome to a greater or less extent. Each ball has a groove of its own, so that when it is lifted it must rise vertically, and when it falls it drops directly back on its seating.

The mixture from each of the jets and air passages combines immediately it leaves the various choke tubes, and passes up to the butterfly valve throttle placed across the induction pipe just

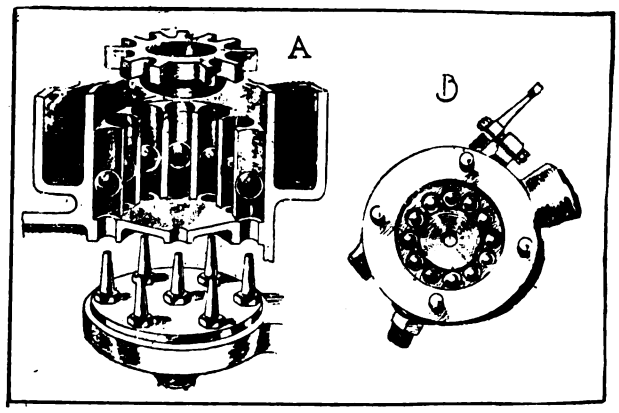

Fig. 2—Daimler Carburetor: A, Showing the Steel Balls Raised Above Their Seatings and the Spider Weight; B, Bottom View of Choke Tubes and Air Passages Covered by the Steel Balls.

above a hollow distance piece, which prevents the balls from rising above the top of their respective grooves.

Digitized by Google

The carburetor is hot water jacketed at a point above the normal position of the balls, as shown in the drawings. The float chamber and fuel chamber carrying the jets may be removed easily when desired by disconnecting the feed pipe and slacking two wing nuts on hinged bolts. The advantage claimed for the carburetor is its quick response to varying positions of the throttle.

SOFTENING CAST IRON.

To soften cast iron for drilling, heat the part to a cherry red, and have it lie level in the fire. Then with the tongs put on a piece of brimstone, a little smaller in size than the hole to be drilled. This softens the iron entirely through. Let the piece remain in the fire until cooled. It will then be ready to work and soft enough to drill.

FITTING WIRES OR CABLES.

In rewiring the car and when the leads pass through the battery box, floorboards, etc., it is sometimes difficult to start the wire through the opening because the diameter is less than that of the lead. The usual practise is to ream the hole larger. When wires are slightly smaller than the opening they may be started by placing the end to be inserted on a flat, hard surface and rolling the insulation with another piece of hard, flat material. This will constrict the end of the insulation so that it may be readily inserted and drawn through.

DYNAMO CLUTCH ADJUSTMENT.

It is only natural to assume that the owner of a car fitted with electric lighting and motor starting systems will turn to the garage repairman when trouble is experienced with the equipment. But it is possible that the owner may tamper with the adjustments in an endeavor to secure maximum efficiency from the lamps when these members are at fault or have been replaced and not focussed properly.

Some lighting systems provide for regulating the output of the dynamo, among which is the Gray & Davis, fitted to a large number of 1913 models. Although it should not give trouble, it is possible through tampering by the owner that the output of the generator may be altered.

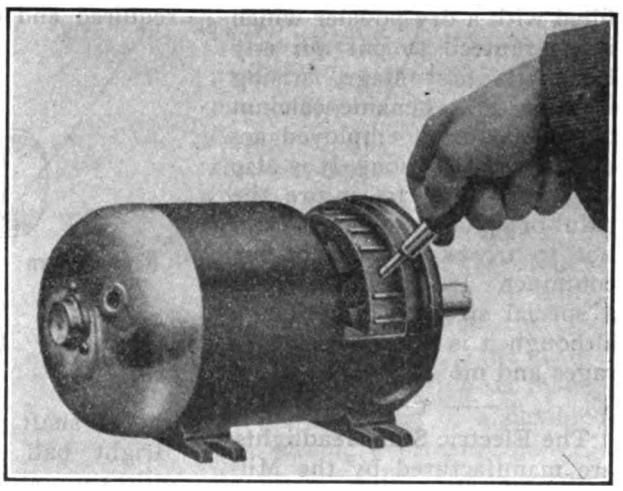
Before arriving at the conclusion that the dynamo is at fault the wiring should be examined thoroughly. Grounds occur when any two wires of opposite polarity come in contact with any conductive material and are indicated by the lights appearing to go out, although really glowing very faintly. One of this type will very soon discharge the battery.

The best method for testing is by utilizing a voltmeter. Disconnect and remove the battery from the car. Connect one side of the battery to the frame and the other to one wire of the voltmeter. Next touch with the free wire of the voltmeter each terminal of the junction box. If any deflection is noted, it indicates a ground. Disconnect each wire from the junction box, repeating the above test as each is displaced.

It is best to disconnect wires marked "to lower terminal of ammeter" and "to series dynamo." If the junction box then shows a ground, the trouble is in the lamp wires, and can be located by tracing the defective wire its entire length. If the ground is indicated when touching the wires leading from the junction box to the ammeter and dynamo, disconnect them at the ammeter and dynamo and repeat the voltage test. In this way, proceeding from terminal to terminal, the defective connection or worn place in the wire can be located without difficulty.

A slight ground may be due to the ground connection having such high resistance that only a small amount of current is lost. This is indicated by the battery not holding its charge and in some instances being entirely discharged over night. This trouble is first noticed when the lights seem to be dim at low car speeds, but brighten as the dynamo cuts in.

If, upon the conclusion of all tests it is shown that the dynamo is not giving its designed output, the clutch may be adjusted. This is accomplished by removing the outside cover and revolving the governor inside the shell until the opening in the shoe marked with a notch coincides with the drill hole in the shell. To increase the driving force of the clutch; that is, to augment the output of the dynamo, the screw is turned to the right. A screw driver .1875 inch wide is best adapted for the work. The method of adjusting the clutch is shown in an accompanying illustration. The governor action is very sensitive, and a full turn of the screw driver will make a considerable difference in the output of the dynamo. If not familiar with the operation of the dynamo, it is best to study the maker's instruction book, which should accompany each equipment.



Showing Method of Adjusting Clutch of the Gray & Davis Lighting Dynamo.

Aluminum may be blackened. The surface of the material to be colored is polished with very fine emery powder or finest emery cloth, after which a thin layer of olive oil is poured over and the part heated slowly over an alcohol flame.

DESIRABLE ACCESSORIES FOR THE DEALER.

Descriptions of the Newest and Most Popular Lines Which the Up-to-Date Agent May Handle with Profit.

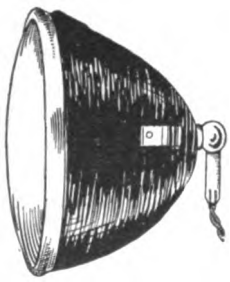
The J-M Fire Extinguisher, marketed by the H. W. Johns-Manville Company, New York

J-M Fire Extinguisher

City, is a compact metal tube filled with a dry powder which is guaranteed to put out any fire in its first stage, arising from gasoline, benzine, calcium carbide, etc., if employed according to directions. It is also warranted not to injure the paint or upholstery of a car and not to freeze or cake in the container. It is constructed in a special size for motor cars, although it is produced for garages and motor boats.

—— ★ ——

The Electric Star Headlights are manufactured by the Milwaukee Bronze Casting Company, 119 Clinton street, Milwaukee, Wis., and are high grade and moderately priced lamps. A quality of these members, which are made in various styles to meet individual requirements, is that but one screw is utilized in their entire construction, rivets and solder being dispensed with.

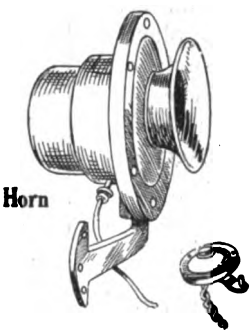


ELECTRIC STAR HEADLIGHT

The material employed is cast aluminum, highly finished and silvered, and the convex lenses are laid in rubber, which makes the lamps dust and water proof, eliminating opportunity for tarnishing. The company manufactures a wide variety of electric lights, including tail, side, dash, etc.

—— ★ ——

The Newtone Type N Horn, produced by the Automobile Supply Manufacturing Company, Brooklyn, N. Y., is designed for those who desire a compact, high grade, efficient signal. It operates on a six-volt storage battery or five dry cells and a quality emphasized is the small amount of current required and consumed. The



Newtone Horn

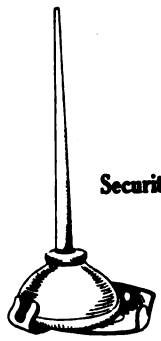
motor shaft rotates on Hess-Bright ball bearings and requires no oiling or adjustment. It is finished in black enamel, nickel or gun metal and comes complete with push button and cable.

—— ★ ——

The Security Oil Can Holder is marketed by the Mayo Manufacturing Company, Chicago, and is designed for retaining the oiler under the hood. The clamp is so constructed that the can may be removed easily by tipping it, and it may be replaced in a similar manner. It will hold cans from three to 3.5 inches in diameter and is finished in copper.

The company is prepared to accept special orders as to finish, variety being available at the option of the purchaser. The best of workmanship and material is used in the manufacture of the holders, which give most durable service.

The Nelson Primer is marketed by the Nelson Manufacturing Company, Randolph and

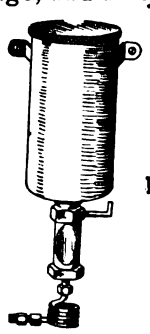


Security Oil Can Holder

Jefferson streets, Chicago, and is utilized for priming the gasoline motor from the seat and making easy the starting of the engine. The vessel holding the fluid is small and compact and is attached to the dashboard by screws. The lower extremity of the device is equipped with a manually operated valve, also a sight feed glass, the latter being for the purpose of enabling the operator to measure the quantity of gasoline being used. The fuel is conveyed to the intake manifold or desired place by copper tubing which is equipped with a coupling. The maker states that it is attached easily, does not require soldering, and that by its use the motor may be primed readily.

—— ★ ——

Silverkote is manufactured by the Page-Lester Company, 125 West Van Buren street, Chicago, and a little of the fluid

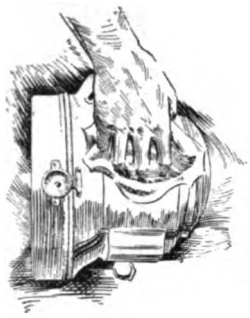


NELSON PRIMER

placed upon a cloth will, the maker states, convert the brass lamps and other accessories of

Digitized by Google

the car into a brilliant silver finish. The material is not injurious to the hands or metal,

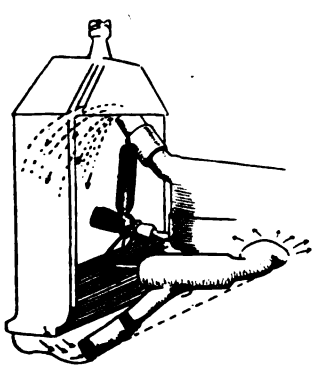


SILVERKOTE

is applied easily and is said to have very durable wearing qualities. It comes in a bottle the contents of which will silver plate the brass work of the average car twice.

—— * ——

The Ford Water Circulator is manufactured by the Fulton-McCutchan Company, 1146 Michigan avenue, Chicago, and as the names implies, is designed for attachment to Ford motors cooled by the thermo-syphon system. It comes complete and includes in addition to the circulator, a split pulley and a spring belt. The former is secured to the fanshaft, which actuates another pulley operating a worm screw located in the intake water manifold. The rotation of the screw member forces the cooled fluid taken from the bottom of the radiator through the water jackets, thence to the cooler. The rate of flow is augmented with increasing motor speeds and the maker



FORD WATER CIRCULATOR

states that the efficiency of the power plant is increased thereby. The circulator is constructed of aluminum and weighs but three pounds.

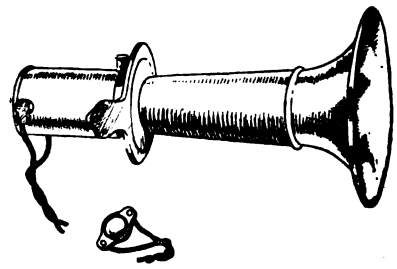
—— * ——

The Automatic Screw Jack, marketed by the Garage Equipment Manufacturing Company, Milwaukee, Wis., will appeal to motorists desiring a light weight, compact, folding jack. It combines the advantages of the screw and lever devices and is equipped with an automatic release which makes it possible to drop the head to a normal position by a simple movement of the hand. It also permits of raising the head to the desired position. This is accomplished by spring jaws engaging with the steel screw member. Release of the jaws is secured through compression. The actuating lever or handle is pivotally mounted, making it possible to stow the jack in a very small space in the tool box. It is made in three sizes having lifting capacities ranging from two to five tons.

AUTOMATIC SCREW JACK

—— * ——

The Newtone Superior Horn is produced by the Automobile Supply Manufacturing Company, 220 Taaffe Place, Brooklyn, N. Y. It is designed to meet the demand for a popular priced signalling device and in it are incorporated the same high grade workmanship and material noticeable in the product of this company. The design is attractive, well finished and economical of current, requiring about 2.5 amperes. The company states that a battery

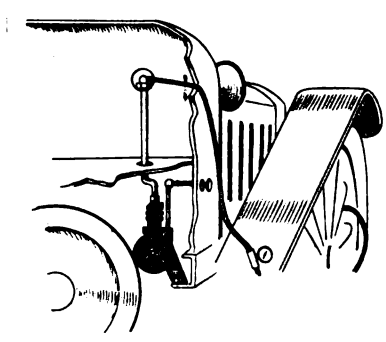


NEWTONE SUPERIOR HORN

will supply current for five months without recharging and as the working parts of the horn are enclosed they are not affected by road dust. The horn comes complete with ample length of flexible cord, push button, etc., and the design of the securing bracket is such that it may be attached easily.

—— * ——

The Two Minute Tire Pump, produced by the Racine Engine & Machine Manufacturing Company, Racine, Wis., is a small, compact device actuated by the flywheel of the motor. It is permanently attached to the frame of the car underneath the footboard. A suitable tubing leads from the cylinder of the pump to the dashboard and provision is made for the attaching of a flexible hose having a pressure gauge, etc. Normally the friction wheel of the pump is not in contact with the periphery of the flywheel. When the service of the pump is desired, a small brass knob on the side of the car is turned, which throws the pulley of the pump into contact



TWO MINUTE TIRE PUMP

with the flywheel, the rotation of which operates the pump developing pressure.

Digitized by Google

The Toledo Spark Plug Tester is a product of the Toledo Auto Devices Company,

TOLEDO SPARK PLUG TESTER

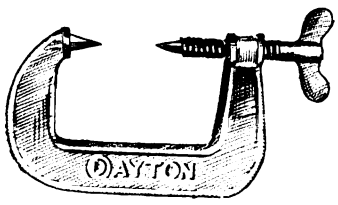
Toledo, O. As the name implies it is designed for locating faulty ignition and a quality claimed of it is that the operation requires but a few seconds. The handle is well insulated and a terminal is provided for attachment. The tester is equipped with a spark gap device by means of which the action of the secondary or high-tension current may be observed.

—— ★ ——

The Dayton Spring Spreader, manufactured by the Dayton Malleable Iron Company, Dayton, O., is a practical and inexpensive tool for the owner as well as the garage man. It comprises a clamp having a fixed point and a similar member on a threaded rod which is actuated by a winged handle. The points are placed between the leaves and the threaded rod turned by hand, a movement spreading the leaves so that the members may be cleaned and lubricated without loosening the spring clips or jacking up the body. The spring spreader is adjustable to any standard size spring.

—— ★ ——

Joseph J. McGuinness, Waterbury, Conn., is manufacturing the De Luxe glass cleaner and polisher, which is specially adapted for removing deposits from windshields, lenses, mirrors, lamps, etc. The maker states it will not scratch the



DAYTON SPRING SPREADER

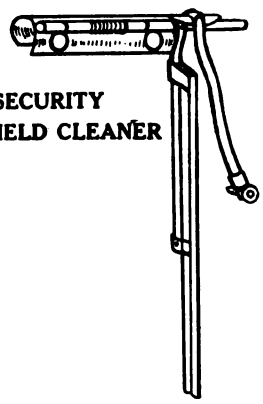
surface and does not contain whiting, oils, acids, etc., and that the polish imparted is lasting. The polisher is soaked in water, wrung out and the burlap side applied to the glass.

—— ★ ——

The Security Windshield Cleaner is marketed by the Eclipse Specialty Company, 250 West 54th street, New York City. By a simple movement of the hand dust, moisture, etc., are quickly removed by a cleaning arm provided with suitable material. The design of the cleaner is such that it will fit any type of windshield and the maker states that it does not interfere with the folding of the sections. Being actuated by one hand it does not disturb the operation of the car and the cleaning arm automatically returns to normal position.

—— ★ ——

The Holtzer-Cabot Electric Company, Boston and Chicago,

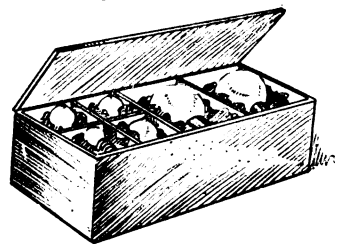


SECURITY WINDSHIELD CLEANER

maker of the Holtzer-Cabot dynamo system of electric lighting, has established a department at the factory in Brookline, Mass., installing its dynamo on private cars. The company is prepared to equip any type of gasoline vehicle and a large number of owners have taken advantage of the opportunity to install electric lighting systems on machines not thus fitted. Estimates will be furnished upon application.

—— ★ ——

The Howard Lamp Chest is the product of the Howard Miniature Lamp Company, 237 Academy street, Newark, N. J., and is designed for the safe keeping of electric bulbs utilized with the lighting system of the motor car. The box is sturdily constructed and covered with cloth. Six compartments are provided, two for the



HOWARD LAMP CHEST

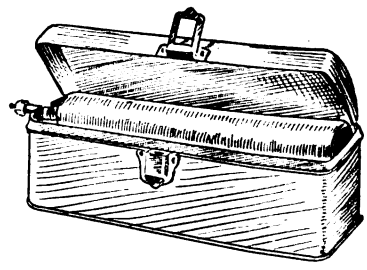
headlights and one each for side, tail and speedometer globes, and the lamps rest in shock proof material. The case accompanies each outfit of Mazda lamps purchased of the company.

—— ★ ——

The Hayes Gas Tank Box is the product of the Hayes Manufacturing Company, Detroit, maker of battery and tool boxes, and is designed for storing the gas tank out of sight as well as preventing its theft. It is constructed of sheet steel and all joints are electrically welded, making for sturdiness. It is finished in baked, black enamel and equipped with a special lifting lock. The tank is made in two sizes for model B and E Prest-O-Lite tanks, and in designs suitable for attachment on either running board and in both directions insofar as the lead from the tank is concerned. The boxes are made plain or with aluminum mats as desired.

—— ★ ——

The Samson Motorcycle Horn is manufactured by the American Electric Company, Chicago, and current is supplied by two or three dry cells. It is a very neat and compact signalling device and produces



HAYES GAS TANK BOX

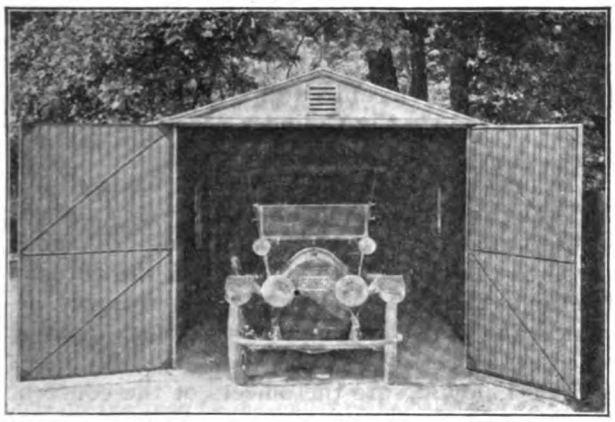
a large volume of sound, upon pressing a button. A clamp is provided for mounting.

Digitized by Google

FEATURES OF EDWARDS PORTABLE GARAGES.

CONSIDERING the number of machines that are stored on the owner's premises, it is not surprising that the problem of the private garage is given serious attention. With the more general use of automobiles, many of those who do not own their own homes have acquired cars and with a large percentage of these the portable garage makes a decided appeal. And there is the motorist who has a summer home in the country or at the seaside, where it is not deemed advisable to erect a substantial permanent structure, although there is quite as much need for a fireproof building as in localities where the fire protection is of the best.

The field offers a particularly attractive opportunity for the dealer, inasmuch as the buildings are supplied in sections, each properly marked, so that it is a simple matter for the purchaser to assemble and erect the structure. The dealer does not need to carry a sample in stock and his business investment is not affected. Every car he sells opens the way to secure a prospect. The buildings are attractive in design and can be secured in all standard sizes and with special dimensions as well.



Edwards All-Steel Garage Owned by Mayor Henry T. Hunt of Cincinnati.

One of the oldest producers of steel garages is the Edwards Manufacturing Company, Cincinati, O., which marketed its first structures of this design in 1905. These are built to meet the varying requirements of motorists in any size desired, although not all are listed as standards, and in two distinct types, one being the Steelcote and the other the All-Steel.

The former has a frame of seasoned wood, usually pine, covered with non-rusting galvanized steel. The entire structure, save beams, uprights, etc., on the inside, is steel, and this is made weather proof by the Edwards Tightcote process, in which each sheet of steel is resquared after stamping and before galvanizing. It is then dipped in molten lead and zinc, which thoroughly covers the edges as well as the sides, a condition which is held to absolutely prevent rusting.

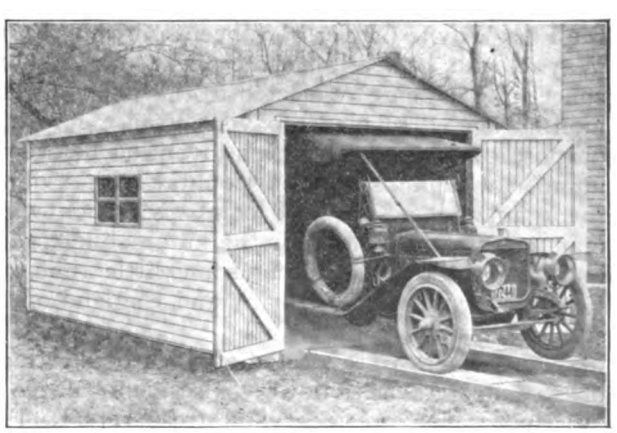
The All-Steel model, as its name implies, contains no wood at all. The roofing, siding, window frames and doors are of non-rusting galvanized steel and the frame of open hearth or Bessemer steel. The siding is Edwards patent beaded lock joint, 26-gauge, each section being equipped with a patented interlocking device, which locks into the stiffening bars, forming air tight joints between sections. The roofing is of the same material, securely locked by slipping into the folded part of the ridge cap and into the turned-up edge of the eave flange. The roof is further reinforced by two extra angle steel purlins, extending the entire length from gable to gable.

Edwards Steelcote Model with Two Windows on Side.

Metal fireproof windows are furnished in two of the side sections, each 27 by 36 inches, with two galvanized steel hinges securely riveted to each frame. These sections being interchangeable, the windows may be placed in any position along the side or end of the building. A Yale & Towne three-tumbler lock securely fastens the door and a combination lock and patented galvanized opening rod is supplied for each window.

It is understood that the Motor and Accessory Manufacturers will soon take steps in opposition to the new tariff schedule on tires, and that several of the tire makers in Trenton, N. J., and vicinity are organizing for this purpose.

Manufacturers of commercial and pleasure electric vehicles are to meet at Boston in a convention to be held May 20-21.



Edwards Design Provides Ample Room for Big Winton.

IS PRODUCING TURNTABLES.

Michigan Concern Incorporates and Secures Enlarged Facilities for Manufacturing.

The T. C. Beach Auto Turntable Company, St. Johns, Mich., has incorporated with capital stock of $10,000 for the purpose of manufacturing automobile turntables. The incorporators and stockholders are: T. C. Beach, R. S. Clark, W. J. Moss and Robert H. Chapin, all of St. Johns.

The cement factory at the crossing of Lansing street and the Grand Trunk railway has been leased, a provision being included for the purchase of the building later if desired. The concern proposes to increase its scope and equipment as fast as the business warrants.

HERMES CAR IN CINCINNATI.

New Company Considering Offers from Many Cities as Location for Its Plant.

The Hermes Motor Car Company, with preliminary capital of $30,000, that shortly is to be increased to $300,000, is a new concern organized at Cincinnati, O., with its preliminary experimenting plant at 1625 Blue Rock street. Although the company is said to be desirous of locating permanently in Cincinnati, it is understood that offers from 15 cities are being considered.

A test motor car, which will be called the Hermes, has been completed by the company and it has been in operation in and around Cincinnati. The machine is equipped with Beaver motor, wire wheels, electric starting and lighting system, and has a 124-inch wheelbase. The promoters have not been named as yet, but will be announced when the company decides definitely upon its future plans.

TO INTEREST FRENCH CAPITAL.

Herrington Resigns as President of Wheel Company to Visit European Makers.

L. Herrington of Chicago, inventor of the automobile wheel which is being manufactured by the Fort Wayne Universal Wheel Company, Fort Wayne, Ind., has resigned the presidency of that concern after being re-elected to that office three months ago. He plans to visit France for the purpose of demonstrating his invention before a number of capitalists in that country with a view to organizing a $1,000,000 company which will manufacture the wheel for the automobile trade in Europe. After spending some little time in France he will go to Germany and England on a similar mission.

New officers were elected at a recent meeting of stockholders as follows: President, J. W. Wisehart; vice president and treasurer, L. H. Moore; secretary, J. C. Thornburgh; superintendent, W. F. Davis; assistant secretary, H. P. Moses; attorney, E. G. Hoffman; directors, J. W. Wisehart, L. H. Moore, J. C. Thornburgh, H. P. Moses, W. F. Davis, E. F. Davis, E. G. Hoffman, Edwin Irle and Dr. G. A. Leach.

STILL ANOTHER TIRE COMPANY.

Morgan & Marshall Concern Will Erect Plant in East Liverpool, O.

The Morgan & Marshall Co-Operative Rubber & Tire Company, East Liverpool, O., which was organized recently, will erect new buildings, instead of purchasing the old Warner-Keffer property as was at first contemplated. It was decided that the best policy was to secure a modern plant in every particular.

It is expected that the factory will be ready for the manufacture of automobile tires and rubber sundries by July 1, and that about 100 skilled workmen will be employed at the start. The equipment will be of the very latest type in every particular and the company announces its intention to specialize in tires for heavy duty cars.

VAUGHN CAR REDESIGNED.

New Company Organized in Kingston, N. Y., to Produce Six-Cylinder Machine.

A new company has been formed to build the Vaughn car at Kingston, N. Y. It has been incorporated for $1,350,000 and numbers among its officers some well known men of the automobile industry. The Vaughn has been newly designed and will be brought out as a six-cylinder machine.

The following are the officers of the concern: President, A. B. Cordner, formerly manager of the General Motors Truck Company, New York branch; general manager, F. E. Moscovics of the Remy Electric Company; secretary-treasurer, Harry W. Jones, formerly connected with the E-M-F organization.

TO LOCATE IN NASHVILLE.

Evans Motor Car Company Will Succeed Detroit Concern in New Surroundings.

The Evans Motor Car Company of Nashville has been chartered at Nashville, Tenn., with capital stock of $50,000, for the purpose of manufacturing commercial motor vehicles and the Evans gas engine. The incorporators are: Everett Philpot, George R. Anthony, Howell Brandon, Clarence Woodcock, A. P. Foster and R. H. Evans.

The concern will take over the business of the Automobile Manufacturing & Engineering Company of Detroit, in which Mr. Evans is interested. It is the intention of the company to locate the factory five miles from Nashville on the Gallatin pike.

Digitized by Google

RECENT PATENTS OF INTEREST.

Engine Hood Cover—Clinton D. Miller, Washington, D. C., No. 1,054,592. The cover is designed to envelop the hood and has a pliable flap adapted to swing over an opening in front.

Automobile Seat—Arthur F. Draper, Berkeley, Cal., No. 1,054,755. A casing is secured to the body of the car and the seat proper is hinged thereto. Means are provided for folding the seat member into the casing.

Bumper—George E. Legendre, Chicago, No. 1,055,057. Spring socket heads are attached to the extension of the frame and a link member is also employed in the connection. The plunger rods are equipped with springs.

Resilient Wheel—William Frederick Doll, Liberty, N. Y., assignor of one-half to Lee McClung, Washington, D. C., No. 1,053,976. The wheel comprises a continuous piece of spring metal coiled to form an inner member, a felloe and supporting member.

Automobile Pump—Richard Anton Goeth, Robert B. Rodgers and John Albert Dittmar, San Antonio, Tex., No. 1,054,762. The pump is designed to be secured to the wheel of the automobile and the piston is actuated by gears which are rotated by the wheel.

Detachable Tread—Junius A. Bowden, Los Angeles, Cal., No. 1,064,820. The shoe is provided with a detachable tread which has projections fitting recesses in the main tread. A wire is employed on each edge of the detachable tread for securing the parts.

Cushion Tire—Dexter J. Thayer, Pittsburg, Penn., No. 1,051,465. The tire is solid and is fitted to a channel shaped rim. Cushioning springs are mounted in the rim beneath the tread and retained by beads. An air space is provided between the springs and rims proper.

Shock Absorber—Fulton A. Green, Kittanning, Penn., No. 1,055,164. The device comprises a cylinder containing a non-expansible fluid, and a hollow piston. The downward movement of the car spring compresses the fluid and the recoil is compensated for by a spring member.

Dirigible Lights—Julius Marion Raiky, Coffeeville, Miss., assignor of one-half to C. K. Bailey of the same place, No. 1,055,225. The headlights are pivotally mounted and are actuated by a pair of arms which in turn are moved by a third arm connected to the steering mechanism.

Wrist Pin Device—Foster C. Rhoads and Hugh A. Leis, Dayton, O., No. 1,054,942. One of the bosses retaining the wristpin is fitted with an aperture carrying a spring and a retaining member. The latter is so constructed that it locks the wristpin, which has a shallow cavity.

Fender and Lamp Support—Richard Tyrell, Missoula, Mont., No. 1,049,946. The fender is made in two sections, partially covers the wheel and is secured in such manner that it moves when the front wheels are deflected. Provision is also made for the mounting of the headlights.

Electrical Connector—Richard H. Welles, Kenosha, Wis., assignor to the Badger Brass Manufacturing Company of the same place, No. 1,054,810. The device is a connector for electric lamps and comprises two shells or casings within which is the connector proper. A spring gripping member is employed having arms for locking the parts.

Auxiliary Steering Gear—John D. Maxfield, Hemet, Cal., No. 1,054,975. The steering device is detachably connected to the forward wheels of a car and projects in opposite directions. A hanger bar is secured to each of the members. Connection is by a cable which is led to a drum. Winding the cable upon the drum moves the wheels as desired.

Muffler—William J. Griffith, Plymouth, Mich., No. 1,055,270. The conventional shell has a number of circumferential grooves and the baffle plates are slidably mounted on rods extending longitudinally through the cylinder. The plates are held in a normal position by a spring and the arrangement of the parts is such that movement of the plates from normal increases the unrestricted area within the shell.

Anti-Skidding Device—Michael C. Harris, Philadelphia, No. 1,053,504. The device comprises a circular series of levers, each member projecting rearwardly between its ends in general V shape, the ends of each lever extending beside each side of the shoe for a short distance. Links are utilized for connecting the levers and a chain for retaining the device.

Tire Filling Machine, Elmer Oliver, Daytona, Fla., No. 1,057,451. A machine for filling tires comprising a hopper, a feed screw operating therein, a feed pipe leading from the hopper outlet, a manually operable cut-off valve in said pipe, a pressure controlled valve in said pipe between the hopper and the first named cut-off valve.

FORMULAE AND USEFUL MECHANICAL TABLES.

Decimal Equivalents of Millimeters.

The accompanying table of decimal equivalents of millimeters and fractions thereof will be of service when the metric measurement is utilized.

Leather and Iron Cement.

To face a cast iron pulley with leather apply acetic acid to the face of the pulley with a brush, which will roughen it by rusting. When dry apply a cement made of one pound of fish glue and half a pound of common glue, melted in a mixture of alcohol and water. The leather should be placed on the pulley and dried under pressure.

Removing Rust from Nickel.

Rust may be removed from nickel by smearing the parts with grease and allowing it to remain several days. If the rust be not deep it will come away with the grease when the latter is removed by a cloth dipped in ammonia. If the rust be very deep, apply a diluted solution of hydrochloric acid, taking care that it does not touch the metal. Wash and polish in the usual manner.

Testing Steel and Iron.

Nitric acid will produce a black spot on steel, the darker the spot the harder the steel. Iron, on the contrary, remains bright if touched with nitric acid. Good steel in its soft state has a curved fracture and a uniform gray lustre; in its hard state it is a dull, silvery uniform white. Cracks, threads or sparkling particles denote poor quality. Good steel will not bear a white heat without falling to pieces, and will crumble under the hammer at a bright, red heat, while at a mild red heat, it may be drawn out under the hammer to a fine point.

Aluminum Solder.

An aluminum solder may be prepared from 50.03 parts zinc, 47.99 parts tin, 1.76 parts aluminum and .22 parts phosphorus. The phosphorus should be added to the other materials in the following manner: Take a piece of one-inch gas piping, about 12 inches long, and screw a cap on at one end. A tin plug may be utilized to close the other opening. The phosphorus should be dried between blotting paper and exposed to the air as little as possible. Remove the cap from the tubing, drop in the phosphorus and replace the cap. The tinned end of the pipe is next dropped into molten tin, the heat of which will be sufficient to melt the plug, and the phosphorus will be mixed with the molten metal without danger. The zinc and aluminum can then be added until the whole forms an alloy. The prosphorus acts as a flux, and consequently, no sal ammoniac or spirits will be required when making a joint. Ordinary copper bits should be used.

TO AID GARAGE KEEPERS.

Senator Bailey of Maine Legislature Explains Need for His Measure.

The bill introduced in the legislature of Maine by Senator Bailey, seeking to protect garage owners, has passed both branches and becomes effective July 12. The text of the bill is as follows:

Whoever puts an automobile in a public garage or any other place where automobiles are stored for hire, and without having an express agreement for credit, procures supplies, accessories or accommodation for himself or said automobile, and with intent to defraud the owner or keeper of said garage, removes or causes to be removed any such automobile from such garage without paying the proper charges due for repairs, supplies, accessories and accommodations furnished thereon, shall be punished by imprisonment not exceeding three months or by a fine not exceeding $100.

In explaining the need for this legislation Senator Bailey cited the fact that the courts of this country have held that a public automobile garage is practically in the same position as a public inn keeper, and must receive any person who comes there with his automobile for accommodation. The supreme court of Michigan has expressly stated that this is the law. Senator Bailey holds that with the increasing number of motoring tourists it has become necessary to afford the garage keeper protection in this respect.

RADIATOR LEAK-PROOF CEMENT.

New Nickel Polish Also Being Produced by the International Metal Polish Company.

The International Metal Polish Company, Quill street and Belt railway, Indianapolis, Ind., maker of the well known Blue Ribbon cream metal polish and auto body gloss, has brought out a new material known as the Blue Ribbon radiator leak proof cement, which the manufacturer claims will stop any ordinary leak. It is introduced into the radiator when the latter is full of water, and the engine is operated until the cement is thoroughly circulated. If the radiator is dirty and rusty it is necessary to first flush it out and clean it, after which it is refilled before introducing the cement, which is guaranteed to close up every crevice. As the solution comes into contact with the air at the leak point it immediately closes the fracture and mends it by forming a permanent and lasting cement filling. It also is held to clean out the circulating system and to prevent scale and rust from forming, thus preserving the metal and increasing the cooling capacity.

The International company also is producing a new polish especially adapted to nickel surfaces which will be appreciated by motorists. To dress the car up right the maker recommends this article as being high class in every respect. The many years of experience of the company in the manufacture of gold and silver polishes and other polish specialties has enabled it to produce a nickel polish which is not an experiment and one which is guaranteed to give perfect results.

The company's Blue Ribbon auto body polish is held to be particularly desirable for use on a high class automobile. It dries dust proof immediately, leaving no grease on the surface and makes the machine look like new. It is also valuable for cleaning, preserving and brightening leather trimmings. The well known Blue Ribbon cream metal polish does not require shaking, the ingredients being carefully blended and in the form of an emulsion. The liquid is greaseless and being free from any sediment it is said not to collect in crevices no matter how liberally applied. It is designed to remove quickly and easily all tarnish from metals and not to soil fabric. It is put up in five and 10-gallon cans for garage and service stations and in smaller containers for car owners.

PULLMAN BUYS FACTORY SITE.

All Question of Possible Removal Now Eliminated and Work of Expansion Planned.

The Pullman Motor Car Company, York, Penn., has purchased the complete land and properties on which its plant is located, together with the three adjoining buildings. The addition of the latter gives ample scope to further the company's expansion policy and plans are now being perfected for the rearrangement of many departments which will facilitate the manufacture of Pullman cars and expedite their prompt delivery.

The Pullman company by this purchase makes itself absolutely independent and eliminates the possibility of future removal because of property conditions over which it would have no control. The various departments are being expanded and brought to the highest point of efficiency. Improvements started several months ago are now rapidly being completed.

McCUE RESIGNS PRESIDENCY.

Understood That Manufacture of McCue Wire Wheels Will Be Under New Policy.

C. T. McCue, former president and founder of the McCue Company, Buffalo, N. Y., has resigned his office and severed all connection with the company's affairs. His action was the outcome, it is said, of matters following the reorganization of the concern. W. T. Evans has been chosen general manager and it is expected that he will succeed to the presidency.

Mr. Evans was formerly manager of the Metal Products Company, Detroit, and for nine years was with the Westinghouse Machine Company. He will reopen the McCue drop forge plant, under the direction of George Desautels, and it is understood that separate concerns will be formed, probably in Indiana, Michigan and Ohio, for the production of McCue wire wheels, etc.

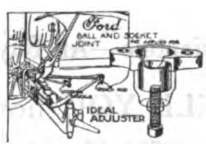
FRONTIER TIRE & RUBBER CO.

1054 Main Street, Buffalo, N. Y.

Equip Your FORD with IDEAL ADJUSTERS
BALL AND SOCKET JOINT

Easy to Install
Easy to Adjust
Made Especially for the FORD Car



Stop All Noise and Rattle
FORD Radius Rod and Steering Rod

The largest size is used for adjusting front end of radius rod, and enables you to take up at any time all lost motion on these parts, also eliminates the rattle and noise. All this is done by a turn of the setscrew which tightens the bearing on the inside.

The small size is used for adjusting the ball and socket joints on the steering gear connecting rod.

We guarantee all adjusters for the life of a car and they are so simple they can not work out of adjustment or need repair.

WILL FIT ANY FORD MODEL. Will give territory and special discount to dealers. List Price, Large Size, $2.00; Small Size, $1.75. If unable to purchase from your dealer, order direct. Manufactured by

JOHN A. VANSICKLE, 2122 East Washington St. INDIANAPOLIS, IND.

PANHARD OIL

The cars you sell. The cars you repair.

Do you want them to make good? It means prestige for you if they do. If so, you must *know* that they are perfectly lubricated. Don't guess at it. Read this, from a dealer who has sold Panhard Oil exclusively for years:—

George A. Haws, New York City.

It may interest you to know that I guaranteed each Rambler car that I sold during 1912, free of repair for one year. I insisted on the use of Panhard Oil.

It cost me less than $5 to make good this guarantee on four cars, with a mileage of 4200 to 7600 each. This fall I took down the four engines, and got less than a small whiskey glass full of carbon from the *sixteen* cylinders after that mileage. *No bearing trouble whatever.*

Panhard Oil will do this for **you.** Talk is cheap, but test Panhard and see for yourself. Write for our proposition. We have many sales helps and many distributing stations, throughout the country.

GEORGE A. HAWS, 148 FRONT STREET, NEW YORK CITY.

PUBLISHED BY THE AUTOMOBILE JOURNAL PUBLISHING COMPANY, PAWTUCKET, R. I.

HOPEWELL WINS

NOTICE!

To The Trade:

We have won our Patent suit against the Linscott Supply Co., for selling spiral spring tire covers, manufactured by Vehicle Apron & Hood Co., of Columbus, Ohio, who defended the suit. Neither their defenses of "want of patentable novelty" or "prior use" was sustained by the Court, and covers manufactured by them were held to infringe Hopewell patent.

We wish to warn the trade against buying, selling, or having in stock, spiral spring tire covers infringing our patents as we intend to fully protect our rights. Copy of decision mailed on request.

We wish to thank those who have stood by us.

FORD DEALERS!—FORD DEALERS!

TRADE APCO MARK

Master Vibrator No. 3

$6.00

Here is a Master Vibrator produced by the largest manufacturers of Ford specialties in the world, whose name is a by-word to every Ford owner. It is built right, looks right and acts right. Not a big, bulky instrument that is forever getting out of order, but a SMALL, COMPACT, POWERFUL machine that will make a Ford car perform under any and all conditions as never before.

POSITIVELY GUARANTEED—

APCO products are known wherever a Ford car is used. This instrument bears the same guarantee that all our goods do---MONEY BACK IF NOT SATISFIED.

We positively guarantee the Master Vibrator No. 3 to:

Start the Car Easier
Give a Hotter Spark
Give More Speed
Consume Less Current
Make Motor More Flexible

Than any vibrator on the market today.

Order Today—
This Ad. Worth Dollars to You

We want every Ford dealer to get one of these instruments at once. We know they are the biggest seller of the day. To be without them means loss of profits. In order to get you to write at once we are going to allow you an extra 5% discount for mentioning this ad. That is, for the next thirty days, one of these instruments is yours for 30% off list price.

This Calendar Advertises Your Garage in 4999 Other Garages

That is, of course, if you carry Texaco Motor Oil. This handsome calendar is displayed in 5000 garages. It advertises two things – first, Texaco Motor Oil, second, *The garage that sells* Texaco Motor Oil.

On every one of the twelve monthly pages is shown a cut of the Texaco sign with the familiar slogan, "When Touring Look for this Sign."

During the great touring months, July and August, these lines appear in bold face type: "When Touring Look for the Texaco Motor Oil Sign. It Means A Good Oil at a Good garage:" and, "When Touring Experienced Motorists Watch for the Texaco Motor Oil Sign. Do you?"

You ask how all this affects you. Consider a moment. How many men who store their cars with you go touring during the summer? To be on the safe side let us say only thirty. Suppose thirty go from each one of 5000 garages—150,000 tourists.

The great majority of these car owners have been in and about the garages they patronize just as your customers are in and about your garage. Also the majority of them use Texaco Motor Oil. But if only half of them do and only half of them read the calendar and follow the advice given, we have 75,000 touring car owners looking for the garage with the Texaco sign.

Remember that the publicity created for the Texaco sign by this calendar is only a very small part of a very large whole. The whole consists of some 700,000 car owning readers of the the publications in which we advertise, of hundreds of dollars worth of direct mail matter, of the work of our large staff of salesmen, of the recommendations of thousands of dealers and consumers who are familiar with Texaco Motor Oil.

This brings us to the leading question. Do you sell Texaco Motor Oil and display the Texaco Sign? You will find it worth your while. If you haven't lined up us a Texas dealer do so now. Write us today for prices and discounts. Address Dept 7.

NUMEROUS CHANGES IN THE INDUSTRY.

Standard Welding Reorganizes Executive Force---Chevrolet Buys Little---Barkman Joins Hupmobile---Blanchard Elected Director of Lenox Company---Other News.

THE changes in the official personnel of the Standard Welding Company, Cleveland, O., maker of Stanweld rims, etc., as announced recently, place at the head of the various departments men who are well known throughout the industry. J. C. Manternach, the new general manager, has been sales manager since 1910. He began his automobile experience with the Pope Manufacturing Company, Hartford, Conn., in 1897, and subsequently joined the forces of the Shelby Steel Tube Company and the National Tube Company. With the last named organization his promotion was so markedly rapid that it brought him to the attention of a number of concerns, among which was the Standard Welding Company. He succeeds Tracy W. Guthrie, resigned, formerly president of the Republic Iron & Steel Company, Youngstown, O.

S. W. Hartley, the new sales manager, has been prominently identified with the engineering end of the automobile industry since its inception in the United States. He is a graduate of Cornell University and has held responsible positions with the Peerless Motor Car Company, Cleveland, O.; the Garford Company, Elyria, O., and the A. O. Smith Company, Milwaukee, Wis.

R. S. Bryant, who becomes consulting engineer, claims to have designed the first quick detachable rim in America. He has been with the Standard Welding Company for the past two years. He formerly was the founder of the Bryant Rim Company, Columbus, O., which was purchased outright by the Diamond Rubber interests some years ago.

F. R. Wilhelmy remains as auditor and credit manager, to which position he has arisen by successive steps through 14 years of service with the company. C. C. Gressel is made superintendent. He has held high positions with the factory organization of the company since its inception some 15 years ago. H. E. Butcher remains in charge of the tube department.

Department Heads with the Standard Welding Company: Left to Right, J. C. Manternach, General Manager; S. W. Hartley, Sales Manager; R. S. Bryant, Consulting Engineer; F. R. Wilhelmy, Auditor and Credit Manager.

The concern has greatly strengthened its organization by its latest acquisitions and its future operations will be on a much larger scale than heretofore, as the executive department is now regarded as capable of maximum efficiency.

The growth of the company has been steady and healthful. With the gradual increase of business it has frequently been found necessary to enlarge the organization, and the recent changes were but a natural expression of this tendency.

SECURES LARGE ORDER.

Heinze Electric Company Is Enjoying Good Business—Branch Canadian Plant.

The Heinze Electric Company, Lowell, Mass., which is establishing a factory at Walkersville, Ont., to care for its Canadian trade, thus allowing the Lowell plant to be the headquarters for the trade in the United States, has closed a contract with the Ford Motor Company, Detroit, maker of Ford cars, to furnish electric coils for Ford machines. The contract is understood to be for a figure in excess of $1,000,000.

TREASURY STOCK SOLD.

Miller Rubber Company Plans to Increase Capital to $2,000,000.

Subscriptions for the $200,000 treasury stock of the Miller Rubber Company, Akron, O., maker of Miller tires, which was offered to the stockholders, were received up to and including May 5. Payments are to be made in three installments and the new stock certificates will be issued July 5. A meeting will be called later to increase the capital stock from $1,000,000 to $2,000,000.

NEW PAIGE FACTORY.

Modern Building to Be Erected to House Entire Organization of the Company.

Plans are ready for operations on the new plant of the Paige-Detroit Motor Car Company, Detroit, maker of Paige cars, which is to be of the most modern construction and complete with every requirement for the latest efficiency methods in manufacturing. The total floor space will be 225,000 feet and the new machinery will be of special design for the production of car parts of the utmost precision and with the greatest economy.

BUYS WHOLE VILLAGE.

Williamsville, Conn., Becomes Property of Goodyear Tire & Rubber Company.

The Goodyear Tire & Rubber Company, Akron, O., maker of Goodyear tires, has announced, through C. W. Seiberling, vice president of the company, the purchase of a large tract of land, known as Williamsville, in the town of Killingly, Conn. On the property is a large cotton mill, four stories high, where will be made a large part of the tire fabrics, hose and belting ducks so extensively used by the company. There also are sufficient houses to care for 350 employees, a church, schoolhouse, a farm to be operated by the company for the benefit of the employees, a store, large boarding house and an assembly hall, together with Lake Alexandria, the local water supply, and the Williamsville Water Company.

The factory will be equipped with the most modern machinery and will be run steadily at a uniform output on fabric for the exclusive use of the Goodyear Tire & Rubber Company, thereby insuring maximum efficiency in production and entire elimination of selling expense.

SELLING HARRIS OILS.

A. W. Harris Oil Company of Providence, R. I., Wins Two Legal Actions.

The A. W. Harris Oil Company, Providence, R. I., maker of Harris automobile lubricants, has recently conducted successfully two suits against others alleging infringement of its trade mark and the improper use of the name Harris in connection with the oil business. The defendants were James C. Harris, doing business as the Harris Oil Company, Muncie, Ind., and the Parker Refining Company.

In prosecuting these actions the A. W. Harris Oil Company maintained that it had been using the name Harris in connection with the oil business since 1885, and that the name had acquired a reputation here and abroad as denoting oils prepared by the A. W. Harris Oil Company of Providence, R. I. Injunctions were desired in each instance.

The United States court in Indiana has enjoined James C. Harris, his agents or associates, from the use of the name Harris or Harris Oil Company, in connection with the business of selling oils or in advertisements, unless preceded by "James C." and followed by "of Muncie, Ind.," in the same size and style of type, and unless accompanied by some statement showing that the oils sold are not the original oils of the A. W. Harris Oil Company. The defendant also is enjoined from the use of containers similar to those of the plaintiff.

The United States court in Ohio issued a perpetual injunction against the Parker Refining Company prohibiting the use of the name Harris in connection with the sale of oils or its use in advertisements or on labels, or the use of a word of similar sound or appearance.

BARKMAN LEAVES MAXWELL.

Returns to Pacific Coast as Western Sales Manager of Hupmobile Company.

In announcing his resignation as assistant commercial manager of the Maxwell Motor Company, Inc., Detroit, A. B. Barkman, who has been closely identified with the Maxwell interests since 1906, has occasioned much surprise. Mr. Barkman becomes western sales manager for the Hupp Motor Car Company, Detroit, maker of the Hupmobile, and will make San Francisco, Cal., his headquarters. In returning to that city he again enters the territory of his adoption, as he became western sales manager of the United

Digitized by Google

States Motor Company in 1911 and spent two years on the Pacific Coast, during which time he became very enthusiastic concerning the country.

A. B. Barkman, Western Sales Manager, Hupp Motor Car Company.

During 27 years of business life Mr. Barkman has made in reality but three changes. He started in the bicycle business and naturally gravitated into the motor car industry in its early days. It was in 1886 that he became sales manager of the bicycle department of A. G. Spaulding & Bros., at the factory Chicopee, Mass. In 1898, when the American Bicycle Company was formed, he became sales manager of the Spaulding division of that concern, remaining until late in 1899.

Early in 1900 he saw the possibilities of the motor car business and became treasurer and general manager of the Bridgeport Motor Company, which he formed at Bridgeport, Conn. In 1906 he gave up this business to become sales manager of the Maxwell-Briscoe Motor Company at Tarrytown, N. Y. After five years at Tarrytown, Mr. Barkman became western sales manager for the United States Motor Company, which controlled the Maxwell-Briscoe company, and when that concern was merged with the Flanders interests into the Maxwell Motor Company he was called East to become assistant commercial manager.

CHEVROLET BUYS LITTLE.

Detroit Advices Indicate Complete Adjustment of Plans for Two Concerns.

According to information from Detroit, the Chevrolet Motor Company, Detroit, maker of Chevrolet cars, has purchased the entire business of the Little Motor Car Company, Flint, Mich., maker of Little automobiles, and the complete line of cars formerly made by both companies will hereafter be known as Chevrolet machines. Two large factories will be in operation by August and will start production on 8500 cars for the 1914 season. The plant formerly operated by the Imperial Wheel Company and recently purchased by the Chevrolet Motor Company, will be devoted exclusively to the production of a roadster.

It is understood that A. B. C. Hardy has been made general manager of the enlarged company, and the operations will be centralized at Flint with the sales force and executive offices at Detroit. E. S. Johnston will remain sales manager. The Chevrolet Motor Company has an authorized capital of $2,500,000, with the following officers: President, C. M. Begole; vice president, W. C. Durant; second vice president and general manager, A. B. C. Hardy; secretary, C. R. Hathaway; treasurer, W. S. Ballenger.

TO PRODUCE NEW RIM.

George Drake Organizes Company in Detroit to Develop His Invention.

George Drake, 200 King avenue, Detroit, who recently obtained a patent on a new type of demountable and detachable automobile rim, has planned to organize a stock company to place the rim on the market. The plant of the company will be located in Detroit, according to the plans of the inventor and those associated with him in the enterprise. The firm name will be Drake-Promenchenkel Rim Company. Rim works on either side with intersecting threads and grooves.

ELECTED TO DIRECTORATE.

Sales Manager of Lenox Motor Car Company Wins Deserved Promotion.

At the semi-annual meeting of the board of directors of the Lenox Motor Car Company, Boston and Hyde Park, Mass., William Blanchard of Boston, sales manager of the company during the past three years, was elected a member of the board. This move was made necessary through the resignation of one of the members and was a fitting tribute to the value of Mr. Blanchard's services to the company.

William Blanchard, Director, Lenox Motor Car Company.

Mr. Blanchard has been connected with the industry for the past six years. He gained his first knowledge of motor cars with the Easton Machine Company, South Easton, Mass., maker of the Morse line, where he worked in every department, serving his full time at the bench and in the shop. It was while acting as salesman for Morse cars that the Lenox company induced him to undertake the exploitation of its line.

APCO MASTER VIBRATOR NO. 3.

Auto Parts Company, Maker of Ford Specialties, Increases Its Line.

The Auto Parts Company, Providence, R. I., well known manufacturer of Ford specialties, has augmented its extensive list by a new master vibrator termed the No. 3. The company has had considerable experience with master vibrators, having previously marketed two designs, and states that the new instrument is superior in every respect to former models in that it is not only more compact, but produces a hotter spark with less consumption of current. The last named feature will appeal to Ford owners whose cars are fitted with electric lighting as a better light is obtained at low speeds.

New Apco Ford Master Vibrator.

The new master vibrator is but 1.5 inches thick, 3.5 wide and five high, dimensions permitting of installation under the hood if desired, thereby eliminating possible obstructions from the dash. The case is of mahogany, highly finished, and the removable cover is accurately fitted, excluding dirt and moisture. All exterior components, such as locking parts, terminals, etc., are heavily nickel plated. The adjusting screw of the vibrator includes a special locking device, and the contact points are unusually large, assuring long life with minimum care. Particular attention has been paid to the windings and these are designed to withstand the high voltages generated by the flywheel magneto.

Although constructed especially for model T Ford automobiles the master vibrator may be utilized with any coil system of ignition where the source of current is a battery or a low-tension magneto. Not only does it synchronize the spark, making for more power and flexibility, but starting is made easy, as each cylinder is assured a hot spark. Although the Apco vibrator is the lowest priced instrument marketed, the best of material and workmanship are incorporated, and it is guaranteed. Liberal discounts are offered to the trade.

The Luverne Automobile Manufacturing Company, Luverne, Minn., has placed in the market a four-cylinder unit power plant, completely equipped, comprising a motor with carburetor and high-tension magneto attached, multiple disc dry plate clutch, selective type transmission with control levers and pedals attached and connected, ready for installation in any style of motor vehicle.

RED ROLL AUTO WASTE.

Put Up in One-Pound Packages, 12 Separate Handfuls.

Although waste is a standard article in the garage, repair shop and service station, its sale is largely restricted to the supply house and accessory dealer. This is due to the fact that it is purchased in bales containing from 10 to 50 pounds. When its use is desired it is taken from the bag by the workmen, an operation involving more or less tearing and breaking of the strands. Often it is given away to accommodate a customer who wishes to borrow a little to wipe his hands or parts of his car. Many times the owner purchases a small quantity at a garage and unless the material is weighed the attendant guesses at the amount. He is more apt to give overweight than not and in the "borrowing" case, it is a loss to the proprietor. Although a small detail when reckoned in cents, it amounts to dollars in the long run.

The Union Wadding Company, Pawtucket, R. I., is marketing the Union Red Roll Auto waste, which presents a new, patented method of handling this product. It has interesting features in that giving away the material is eliminated and the form of the package will appeal to motor car owners and motor boatmen. The size of the container makes for convenience and it is an easy one to stock as it is but 12 by three inches. Each package contains one pound of carefully selected, long fibre waste, compressed into 12 distinct rolls, which are removed separately as desired. Each individual roll is sufficiently large to meet the requirements of ordinary service and the arrangement not only saves space in the tool box, etc., but assures the user of perfectly clean material. The container is sturdy and the removal of one roll does not impair its shape. The retail price of Red Roll Auto waste is moderate and the maker offers an interesting proposition to the dealer and trade.

Illustrating the Convenience and Compactness of the Union Red Roll Auto Waste, Marketed by the Union Wadding Company.

GENERAL NEWS OF THE INDUSTRY.

Latest Information of the Activities of Manufacturers and Dealers, New Concerns, and Removals, Incorporations, Building Operations, Changes in Personnel, Etc.

INCORPORATIONS.

The following concerns have been incorporated recently to manufacture or deal in automobiles, accessories, supplies, etc.:

Consolidated Gas & Gasoline Engine Company, Wyandanch, N. Y.; $15,000; G. H. Scanlan, F. B. Knowlton, E. J. Forhan.

International Automobile School, San Antonio, Tex.; $4000; T. P. Price, G. Leroy, J. A. Kerr.

Fulton-Post Company, New York City; $1000; R. H. Post, W. H. Fulton, L. M. Dietrich.

D. W. Baldwin & Son, New Haven, Conn.; $20,000; H. D. Baldwin, M. A. Baldwin, C. T. Baldwin.

Motor Compressor Company, New York City; $10,000; to manufacture motors; G. J. Spohrer, C. E. Van Vleck, R. L. Redfield.

Carbon-Oxygen Gas Engine Company, Boston, Mass.; $500,000; A. H. Rhodes, A. P. French, W. Falletly.

Lil's Motors Company, Brooklyn, N. Y.; $4000; T. J. Qualey, E. McDonald, G. H. Wendling.

M-A-Z Concealed Hinge Company, Kenosha, Wis.; $10,000; H. M. Mink, E. Anderson, J. P. Zens.

Shimauto Manufacturing Company, Indianapolis, Ind.; $10,000; to make motor car polishes and soaps; W. L. Bedford, J. C. Sharp, M. A. Seligman.

Buffalo Automobile Spring Company, Buffalo, N. Y.; $10,000; E. Plantz, W. E. Slater, H. Etlinger.

Ferns Motor Delivery, Chicago, Ill.; $50,000; M. M. Franey, A. J. Goldine, H. P. Mumms.

Philippart Motor Car Company, Detroit, Mich.; $2000; to manufacture engines and accessories.

Barber Auto Service Company, Brooklyn, N. Y.; $10,000; William Barber, A. S. Barber, M. F. Barber.

Allen Brede Tractor Company, Cincinnati, O.; $5000; Allen Brede, L. J. Dolle, H. V. Reedy.

E-Z Auto Tire Pump Company, Wilmington, Del.; $20,000; F. D. Buck, G. W. Dillman, B. M. Grawl.

New Idea Tire Company, Philadelphia, Penn.; $500,000; F. R. Hansell, G. H. B. Martin, S. C. Seymour.

Porto Metal House & Garage Company, Milwaukee, Wis.; to manufacture portable steel structures for automobile storage and outing purposes; J. E. Tracy, P. G. Meyer, J. P. Weber.

Oakes Pressed Steel Company, Indianapolis, Ind.; W. H. Oakes, W. D. Oakes, C. G. Swenson.

Dreadnought Tire & Rubber Company, Baltimore, Md.; $1,000,000; A. F. Gilbert, Wilmer Dunbar, W. E. Hill, C. P. Tiplett, W. B. Swindell, Sr., A. A. Adt, R. H. Diggs, H. E. Whitelock, A. B. Whitelock, G. H. Rice.

Holland Flexible Auto Wheel Company, Cleveland, O.; $10,000; J. L. Dunahue, J. E. McKenna.

Grant Motor Company, Detroit, Mich.; $100,000; to manufacture cyclecars; G. D. Grant, C. A. Grant, David Shaw, G. F. Salzman, J. M. Howe.

Haupt Company, Cleveland, O.; $5000; W. D. Haupt, H. A. Couse, R. G. Curren, Mary McManus, Alfred Clum.

Pittsburg Haynes Automobile Company, Pittsburg, Penn.; $10,000; H. S. Morrow, E. K. Morrow, Alva Hughson.

H. G. Borbein & Co., St. Louis, Mo.; $10,000; H. G. Borbein, L. W. Becker, L. B. Borbein.

Service Boat & Engine Company, Syracuse, N. Y.; $10,000; to deal in motors; W. J. Eastman, L. J. Rolfsen, C. L. Ripley.

Electromobile Company, Wilmington, Del.; $100,000; to manufacture electric automobiles; H. E. Latter, W. J. Maloney, O. J. Reichard.

Hydraulic Transmission Company, Stevens Point, Wis.; $45,000; J. P. Atwell, Benjamin Beijer, Arthur Beijer.

Bierman-Everett Foundry Company, Irvington, N. J.; $125,000; welding supplies; G. Bierman, J. E. Berlanbach, W. H. Mantz.

Miles B. Mank Motor Car Company, Portland, Me.; $10,000; Miles B. Mank, Annie E. Mank, Cecile F. Mank.

Beeler Slide Valve Motor Company, Chicago; $20,000; E. Burleigh Beeler, S. D. Hirschl, M. A. Hirschl.

Michigan Motor Car Company, Memphis, Tenn.; $5000; I. Bennett, C. V. York, J. J. Carrigan.

Prince Street Garage Company, Elizabeth, N. J.; $25,000; Edward S. Fabian, George C. Otto, Alice Byrne.

Cuno Engineering Company, Meriden, Conn.; $50,000; to make safety starters; Charles H. Cuno and others.

Auto Sales Company of Illinois, Chicago; $2000; T. J. Peden, R. C. Merrick, J. W. Yaeger.

Mendham Garage Company, Mendham, N. J.; $50,000; L. K. Hill, E. L. Garabrant, J. M. Hoffman.

Whittemore Cab Company, Brooklyn, N. Y.; $1000; Albert Wald, C. F. Fuerst, W. I. Wiedeman.

Hartford Storage Battery & Supply Company, Hartford, Conn.; $10,000; G. W. Gammack, C. C. Krolin.

Montreal Auto 'Bus Company, Montreal, Can.; $10,000,000; to manufacture automobile 'buses; H. S. Holt, U. H. Dandurand, F. L. Wanklyn, D. McDonald, J. S. Norris, Tancrede Bienvenue, D. Lorne McGibbon, Paul Galibert, J. E. Wild.

Alpha Lamp Company, Newark, N. J.; $25,000; G. A. Furnell and others.

Variable Clutch & Variable Transmission Company, Seattle, Wash.; $100,000; C. E. Lawson, H. A. Emery.

Kelsey Wheel Company, Toronto, Can.; $150,000; Malcolm C. Campbell, Oscar E. Fleming, Benjamin J. Cox.

Harris Carburetor Company, Cleveland, O.; $15,000; H. C. Cummings, Fred B. Fishman, John W. Camp, Louis A. Black, Harry Pott.

Ajello Hydro-Aeroplane Company, Pittsburg, Penn.; $50,000; engines, machinery, etc.; Vincent Ajello, Automa Floccker, Fabio D. Alessio.

Bellaire Automobile Company, Bellaire, O.; $6500; George D. Spragg, J. F. Johnson, George Neil, J. H. Greenlee, W. H. Morris.

Autopart Company, Los Angeles, Cal.; $10,000; H. L. Kimmell, W. C. Hanson, John H. Lane.

Marietta Livery & Garage, Chicago; $2500; Frank E. Marietta, Fred B. Schuchardt, Wilson Herren.

Standard Tire & Repair Company, Columbus, O.; $10,000; Glen G. Moisey, Otto Aerb, Lawrence T. Fay, H. F. Moisey, Francis V. Brady.

A & C Motor & Manufacturing Company, Los Angeles, Cal.; $250,000; S. T. Allen, H. Allen, G. A. Cleaveland.

Arnold Motor & Supply Company, Joplin, Mo.; $2000; Jesse L. Arnold, Ida Tweed Arnold, Flora Arnold Snider.

Federal Auto Supply Company, Pittsburg, Penn.; $10,000; C. C. Herr, G. M. Newmyer, C. D. Greene.

Pittsburg Auto Transit Company, Pittsburg, Penn.; $5000; A. V. Crookston, Howard B. Oursler, W. A. Feltyberger, C. R. Beatty.

Davis Livery & Motor Car Company, Denison, Tex.; $10,000; E. E. Davis, Earl Wood, R. L. Aspley.

Ingle Motors Company, Newark, N. J.; $25,000; to manufacture motors, engines, etc.; J. E. Ingle, Jr., C. E. Riess, C. K. Muurling.

Auto Company, Inc., South Boston, Va.; $15,000; J. A. Mebane, Frank Mebane, W. W. Ballou.

Imperial Auto & Livery Company, Cincinnati, O.; $2000; Satolli F. Glasseme, William Shullman, N. A. Nicholson, Joseph Lemkuhl, Charles T. Ryan.

National Jack & Manufacturing Company, Springfield, Ill.; $6000; G. R. Wallace, J. L. Glaze, C. F. Kraft.

Cincinnati Alco Motor Car & Truck Company, Cincinnati, O.; $25,000; Walter H. Peters and others.

Greater New York Motor Company, Inc., New York City; $10,000; garage, etc.; Amil Merust, Samuel Feldman, Caesar Pianisani.

North End Garage Corporation, Middletown, N. Y.; $10,000; Edward Van Duzer, J. G. Eager, F. F. Sheerin.

N. W. Liquid Tire Tonic Company, Minneapolis, Minn.; $50,000; F. M. Rutten, H. W. Ewing, L. P. Fay, A. G. Rose, Jr.

J-M Shock Absorber Company, New York City; $1000; Maurice Rosvold, E. Molancheir, Erie Aquist.

Packard-Bretey Auto Renting Company, New York City; $2500; Henry Pearlman, John Blumenthal, S. J. Loeb.

City Garage & Sales Company, Pittsburg, Penn.; $50,000; W. G. Venn, M. H. Ward, H. N. Stackpole.

S. & H. Motor Company, Inc., Jacksonville, Fla.; $10,000; B. D. Spinney, Joseph Lockwood, J. S. Bertram.

E. Landin Auto Company, Kansas City, Mo.; M. J. Oldham, W. G. Bryant, M. S. Kenney, W. L. Gregg.

Automobile Clearing House Company, Louisville, Ky.; $2500; C. L. Holden, W. J. Welch, C. H. Welch.

White Sales Company, Jacksonville, Fla.; $100,000; J. R. Collins, P. D. Casidey, N. A. Collins.

Neosho Auto Company, Neosho, Mo.; $3500; A. C. McGinty, J. F. Wills, S. D. DeLapp, F. S. Briggs, E. R. Ruddy, O. L. Craven.

Gallagher Carburetor Company, New York City; $300,000; to manufacture carburetors, engines, automobile supplies; R. W. Gallagher, W. M. Foord, H. A. Johnston.

Pearl River Auto Company, Pearl River, N. Y.; $5000; O. R. Kosel, Herman Gunther, Marie Kosel.

Hall & Taylor Company, Trenton, N. J.; $25,000; William H. Taylor, H. A. Hall, Harold Hall.

Quality Tire & Rubber Company, Akron, O.; $1000; R. E. Smith, J. G. Guither, E. D. Smith, E. L. Smith, J. H. Robertson.

Bellevue Garage, Bellevue, Penn.; $10,000; E. A. Shaner, C. W. McCall, W. M. Barnhardt.

City Automobile Company, Athens, O.; $12,000; Ura Butcher, Dana Connett, G. H. Junod, C. J. Ailstock, Mabel Butcher.

Couch-Georger Tire & Manufacturing Company, Buffalo, N. Y.; $10,000; C. A. Couch, E. F. Howell, F. P. Georger.

Chandler Motor Car Company, Boston, Mass.; $30,000; R. O. Hood, E. G. Cleary, M. L. Albina Vincent.

Federal Services Company, Chicago; $2500; to make automobile supplies; L. O. Hack, R. S. Wertheim, S. H. Rothschild.

Star Taxicab Company, Hamilton, O.; $5000; G. C. Skinner, A. M. Skinner, William Miller, Merle Fenner, Milliken Shotts.

Darling Automobile Manufacturing Company, Britton, Okla.; $25,000; C. P. Stealey, A. W. Hedge, H. O. Crum, G. E. Crawford, S. L. Shintaffer, D. L. Sellers, W. C. Settle, H. S. Emmerson, C. L. Stealey.

Allen Reed Tractor Company, Cincinnati, O.; $50,000; to manufacture and deal in tractor engines; Allen Reed, L. J. Colle, H. J. Reed, W. C. Taylor, E. B. Lamping.

Woodland Garage Company, Cleveland, O.; $5000; Jacob Soglovitz, A. E. Bernstein, B. J. Sawyer, Sadie Cohn, I. Nungesser.

Wahl Motor Car Company, Detroit; $500,000; to manufacture motor trucks; G. H. Wahl, J. E. Hofweber, A. J. Hofweber, M. Kratchwill.

M-A-A Concealed Hinge Company, Kenosha, Wis.; $10,000; to manufacture hinges and locks for automobile bodies, etc.

Auto Garage Company, Cleveland, O.; $5000; J. M. Bachelder, W. M. Dilkes, G. W. Gurney, Horace Neff.

Modern Garage, Chicago; $3000; Albert C. Hanks, Julius N. Hanks, Henry F. Borchert.

Tarrytown Motor Car Company, Inc., New York City; $250,000; W. Odell, B. J. Knerr, A. M. Levy.

Selig Motor Company, St. Louis, Mo.; $10,000; James A. Leavell, William J. Carter, Charles F. Schwartz.

Western Co-Operative Auto Supply Company, Topeka, Kan.; $25,000; M. T. Kemper, M. C. Wells, J. H. Walters, T. R. Paxton, J. R. Mulvane.

Haslup Brass Manufacturing Company, Inc., Brooklyn, N. Y.; $25,000; to manufacture and deal in hardware and automobile supplies; Edward W. Haslup, F. D. Glover, J. Scholl.

Auto Owners' Sales Company, Los Angeles, Cal.; $10,000; A. G. Keskett, Frank L. Coombs, Peter J. Minck, E. C. Peterson, Karl A. Klitten.

Velie Motor Company of Missouri, St. Louis, Mo.; $10,000; William J. Carter, Charles F. Schwartz, T. D. Cannon.

Indianapolis Auto Sales Company, Indianapolis, Ind.; $10,000; Howard S. Wilcox, Donald H. Herr, B. W. Rout.

International Specialty Company, Wilmington, Del.; $100,000; automobile business; R. Boyd Cooling, Clarence J. Jacobs, Harry W. Davis.

Texas Carriage & Top Company, Houston, Tex.; $10,000; John R. Patton, Charles E. Garbnet, S. W. Turney.

The Indiana Motor Truck Sales Company, New York City; $10,000; L. C. Knoegel and others.

Gerleit Auto Spring Wheel Company, New York City; $200,000; August H. Gerleit, Henry Heil and others.

Knight & Kilbourne Patents Company, Chicago, Ill.; $1,000,000; to make automobiles, engines, etc.; offices at 67 West South Water street.

The Baxton Garage, Omaha, Neb., has been incorporated with capital of $10,000 by L. W. Prenica, J. H. Swanson and H. H. Bowes.

Ross Automobile Company, Inc., Auburn, N. Y.; $10,000; Edward A. Ross, Maurice E. Tuller, Harry A. Barr.

Globe Rubber Tire Manufacturing Company, New York City; $1,500,000; to manufacture tires and all accessories for automobiles; Harry D. James, James P. Hall, Spencer Weart.

Redondo Beach Auto Association, Redondo, Cal.; $5000; H. Brolaski, G. S. Duncan, V. R. Huddleston.

H. H. H. Tire & Manufacturing Company, New York City; $50,000; John Dravis, William C. Burroughs, John J. Coyle.

French-American Rubber Company, Los Angeles, Cal.; $20,000; F. I. Lee, William Berbet, T. H. Roder.

Troy Auto 'Bus Corporation, Troy, N. Y.; $20,000; John Burdick, Ernest L. Snyder, John McGlynn.

Empire Auto Company, Webb City, Mo.; $2400; W. L. Miller, J. Caesar, M. S. Miller.

Motor & Bicycle Track Company, Salt Lake City; $1000; W. H. Heagren, W. P. Fowler, Samuel Williams.

Northwestern Tire Company, Chicago; $2000; George A. Chritton, N. B. Dearborn, L. Holzholb.

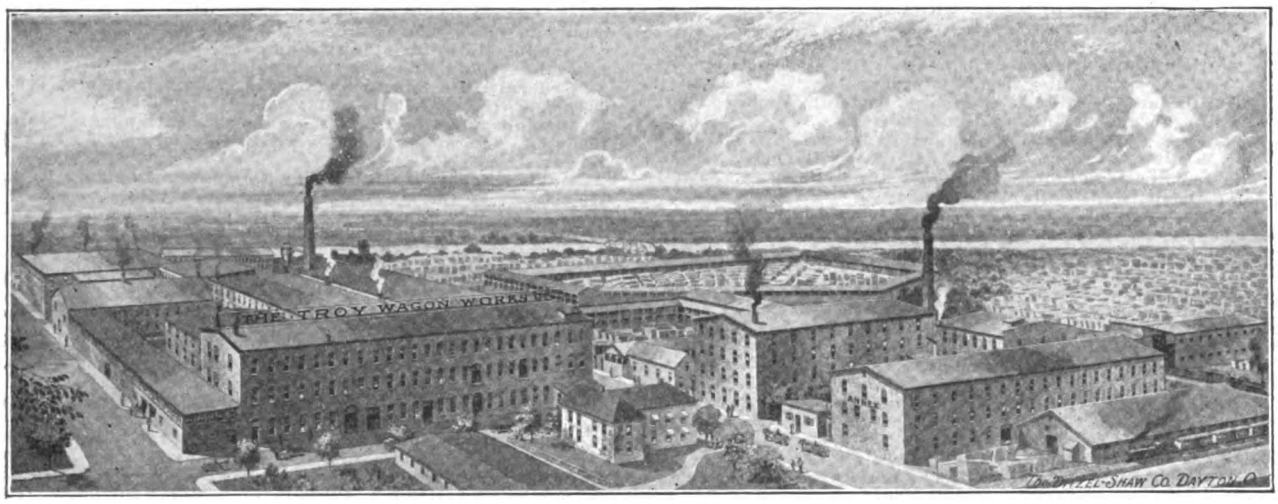
Hercules Lock Company, Cleveland, O.; $1000; automobile specialties; H. A. Hauxhurst, George Bissell, Robert T. Mitchell, R. Hall, M. T. Flanagan.

Dunlop Wire Wheel Corporation of America, New York City; $400,000; W. L. Fry, C. J. Kleber, C. G. Campbell.

MANUFACTURERS.

The Essenkay Products Company, 1125-29 West Thirty-seventh street, Chicago, announces that it has acquired the copyrights, trade marks, patents and good will of the Essenkay Company, as well as the exclusive right to manufacture and sell Essenkay. The plan of establishing general agencies has also been changed, so as to permit all supply houses and garages to sell and install Essenkay. The company is composed of F. D. Mayer, William B. Russell and William L. Weber.

The Troy Wagon Works Company, Troy, O., maker of wagons, has developed a trailer for motor trucks, which is being built in several sizes and of which extensive tests have been made at the works. There is believed to be a decided future in store for trailers for motor trucks and tractors, as commercial organizations doing business which requires heavy hauling are rapidly realizing the advantages that accrue from the use of the mechanical transport. With the application of trailers additional loads can be hauled, thereby saving much time and generally contributing to economy and efficiency. The previous reputation of the product of the Troy company, the plant of which is shown in an accompanying illustration, would seem to indicate a corresponding success in this new field.



Plant of Troy Wagon Works Company, Troy, O., at Which Is Being Developed a New Type of Motor Truck Trailer.

The Fedders Manufacturing Company, Buffalo, N. Y., has been incorporated with $400,000 capital stock and the certificate of incorporation has been filed with the county clerk. The concern will manufacture and sell automobile radiators and other sheet metal specialties. The directors are given as Theodore C. Fedders, Christian W. Fedders, John M. Fedders and Louis F. Fedders, all of Buffalo.

The Knox Automobile Company, Springfield, Mass., maker of Knox machines, is to transform its representation at Boston from an agency to a branch office, which will be in charge of Frank B. Crockett, who was formerly connected with the Underhill Company in that city, the Boston agent for the Knox company since 1901.

The Studebaker Corporation, Detroit, maker of Studebaker cars, has completed plans for a new two-story $60,000 building on the southwest corner of Forest Park boulevard and Boyle avenue, St. Louis, Mo., to be occupied by the company, which has a 15-year lease on the property. Electric elevator and spacious office quarters will be features. The building is expected to be ready for occupancy by July 15.

The Olds Motor Works, Lansing, Mich., maker of Oldsmobile machines, has opened new branches at Pittsburg, Penn., and Atlanta, Ga., as a result of a recent trip by J. V. Hall, sales manager of the company, and it is stated that others in several large centres will soon be opened.

The American Motors Company, Indianapolis, Ind., has made a number of important changes in its sales or-

Digitized by Google

ganization. D. B. Williams, who for the last two years has occupied the position of advertising and publicity manager, has resigned to assume a place in the sales organization as district sales manager with headquarters at Louisville, Ky. G. L. Moskovics, formerly assistant advertising manager under Mr. Williams, takes the place made vacant by the latter's change. E. H. Sherwood, formerly connected with the Mercer Automobile Company, Trenton, N. J., is now connected with the general sales department as assistant sales manager.

The Pittsburg Taximeter Company, Pittsburg, Penn., one of the largest makers of taxicab meters in the country, recently closed contracts to equip all the machines owned by the Detroit Taxicab & Transfer Company and the cars of the Cleveland Taxicab Company. The company also has a large order for its product to be shipped to Rio de Janeiro, Brazil.

The Studebaker Corporation, Detroit, maker of Studebaker cars, has secured the home of the Detroit Curling Club and it is now known as Plant 14 in the Studebaker system.

The Thomas B. Jeffery Company, Kenosha, Wis., maker of Rambler and Cross Country cars, will this year celebrate the 40th anniversary of its entrance into the manufacturing field. For 28 years Thomas B. Jeffery was associated with R. P. Gormully in the manufacture of the Rambler bicycle and other kindred products, while for the past 12 years the outgrowth of the old Gormully and Jeffery company has manufactured Rambler motor cars at Kenosha.

The Welch Plant at Pontiac, Mich., one of the General Motors group, will in future be known as Northway plant No. 2 and will aid the Detroit factory in the production of Northway motors. Since the Welch car was taken to Detroit for manufacture the Welch plant at Pontiac has made motors for the G. M. C. trucks. The change will make no difference in the number of employees.

The Chevrolet Motor Company, maker of Chevrolet cars, will not leave Detroit, as reported, the advertisement offering the plant on West Grand boulevard for sale having been inserted by a real estate corporation. The plant belongs to the Corcoran Lamp Company, which may sell it, but the Chevrolet company holds a lease and will continue to operate the plant.

The Lincoln Motor Car Works, Chicago, maker of Lincoln trucks, has granted to the Lincoln Motor Sales Company, Los Angeles, Cal., the manufacturing rights for the Pacific Coast of the Lincoln half-ton wagon. Not only will this permit of more prompt delivery, but will save many freight charges. It is the intention of the sales company, of which John A. Meeks and B. F. Taylor are secretary and treasurer, and vice president and general manager, respectively, to manufacture 1000 vehicles the first year, establishing branches in all the principal cities on the Pacific Coast.

The Royal Equipment Company, Bridgeport, Conn., maker of Raybestos brake lining, Duplex brakes and brake bands, and Gyrex, the mixer, has moved into its new building on Railroad avenue, which was recently completed.

The Wallis Tractor Company, Milwaukee, Wis., formed with $800,000 capital, has rented the factory buildings on East Seventy-second street, near Clair avenue, formerly occupied by the Royal Automobile Company, and will manufacture traction engines on a large scale. H. M. Wallis, Sr., and H. M. Wallis, Jr., are the main stockholders in the concern.

The Hewitt Rubber Company, Buffalo, N. Y., will erect a new three-story factory at 240 Kensington avenue, to cost $175,000.

The E. B. Van Wagner Manufacturing Company, Syracuse, N. Y., has moved its general offices to the factory at Fayetteville, N. Y., as the result of extensive improvements which increased the factory and office facilities.

The Marathon Tire & Rubber Company, Cuyahoga Falls, O., is to enlarge its plant to care for increasing business. The additions will provide 2200 more feet of floor space.

The Hans Motor Equipment Company, La Crosse, Wis., is the first industry to occupy a share of the 64-acre tract of land purchased by the Industrial Association of La Crosse to provide free factory sites for new industries locating in that city. The land is touched by two trunk railroads and is connected with the Mississippi river by the Black river.

The S. & M. Tire & Rubber Company, Akron, O., is having the old Premium building on Cambridge street, Coshocton, O., remodelled, where it will move as soon as the work is completed, which is expected to occupy about 90 days.

The Holtzer-Cabot Electric Company, Boston, Mass., has opened a New York office in the new Architects building, Fortieth street and Park avenue. It is in charge of M. J. McElroy and will handle a full line of the company's products, including Reacto horns and Newcomb carburetors.

The Chambray Carburetor Company, Detroit, was recently incorporated with $50,000 capital stock, the name of the concern being a combination of part of the names of two of its chief incorporators, who are as follows: John H. Chambers, John W. Mowbray and Charles H. Bennett.

The B. F. Goodrich Company, Akron, O., maker of Goodrich tires, has encountered such a demand for its product in Canada that it has been decided to build a large factory to supply the Canadian needs. Thirty-two acres of land have been secured at Saint Catharines, Ont., conveniently located for the handling of traffic by railroad, and the new factory will be modelled on the lines of the parent Akron plant. When fully developed it is planned to employ at least 1000 hands, with ample provision for future extensions.

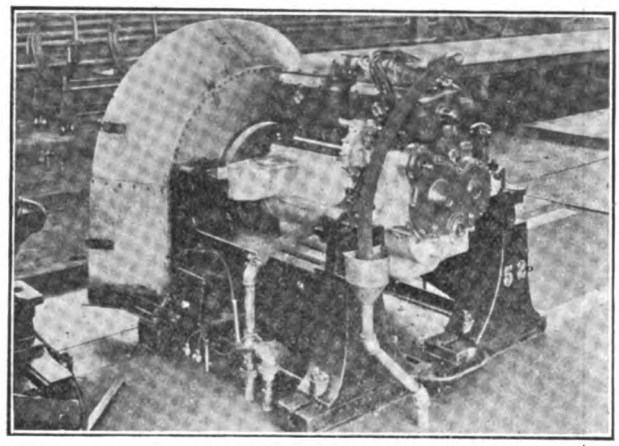
The American Gas Engineering Company, Sheboygan, Wis., recently formed with a capital of $50,000, has broken ground for a plant consisting of three buildings.

The Alliance Rubber Company, Alliance, O., has begun work on several additions to its plant, the old factory buildings being inadequate.

The Wagenhals Motor Car Company, Detroit, maker of a three-wheel commercial car, has increased its capital from $100,000 to $500,000 and will locate in a much larger plant in order to increase its output. William Pflum of Dayton, O., formerly manager of the National Cash Register Company, is interested with Mr. Wagenhals and is preparing to take an active part in pushing the company's product to the front.

The Federal Rubber Manufacturing Company, Milwaukee, Wis., maker of Federal tires, has opened a factory branch at Detroit in charge of A. L. De Vault. It is located at 846 Woodward avenue and will supply the trade in that territory.

The Continental Motor Manufacturing Company, which recently built a new plant at Detroit, has solved the problem of testing its motors without danger to those engaged in the process. The danger of an explosion is ever present, but the company has built its testing room one story high, with monitor roof and designed for plenty of light. In an accompanying illustration is shown a motor on its block and this is so arranged that it exhausts into a trench that has loose covered plates so that it can be cleaned. These trenches are connected to a large exhaust fan located in another room, separated by a fire wall. To avoid explosions an opening is left near each engine exhaust, which pulls in fresh air and dilutes the exhaust so that it is too weak to explode. Metal doors are suspended in each branch of the tunnel and in case of fire they drop automatically, confining the fire to one section.



Testing Block in New Motor Department of Continental Motor Manufacturing Company, Detroit—Precautions Are Taken to Prevent Fires by Use of Special Equipment.

The Ralston Motor Company, Omaha, Neb., has amended its articles of incorporation and is now known as the Omaha Tractor & Engine Company. The capital stock is $500,000 and the incorporators are H. E. Johnson, H. K. Burket, Isaac Kahn, Gottlieb Brunnenkant and E. G. McGilton.

The Grant-Lees Machine Company, Cleveland, O., has been reincorporated under the name of Grant-Lees Gear Company. This is to express more concisely the chief activities of the company, which recently made several large additions to its plant.

The Lozier Motor Company, Detroit, maker of Lozier cars, has established a factory branch at Seattle, Wash., with Carl Schnorr in charge of the mechanical department.

The Bosch Magneto Company's factory at Springfield, Mass., established a record for April when nearly 25,000 magnetos were shipped.

The Davies-Bach Manufacturing Company, Cleveland, O., has increased its capital from $300,000 to $600,000 to provide additional working capital. A contract will be let for a large addition to its plant at Alliance, O.

The Detroit Electric Appliance Company, Detroit, maker of the Deaco electric lighting and starting systems, is building a new plant on East Grand boulevard. It will be of brick and concrete and three stories high.

The Warner-Detroit Motor Works, Detroit, has been founded by H. L. Warner of the Warner Gear Company and the Muncie Gear Works of Muncie, Ind. Temporary offices have been established in the Dime building, the

Digitized by Google

company having formulated plans for a factory in which to manufacture Warner-Detroit four and six-cylinder motors.

The Heinse Electric Company, Lowell, Mass., has obtained a factory at Walkerville, Ont., which will employ 200 men, the building having 25,000 square feet of floor space. Deliveries to the Canadian trade started in June. The Lowell factory will continue as headquarters for the trade in the United States.

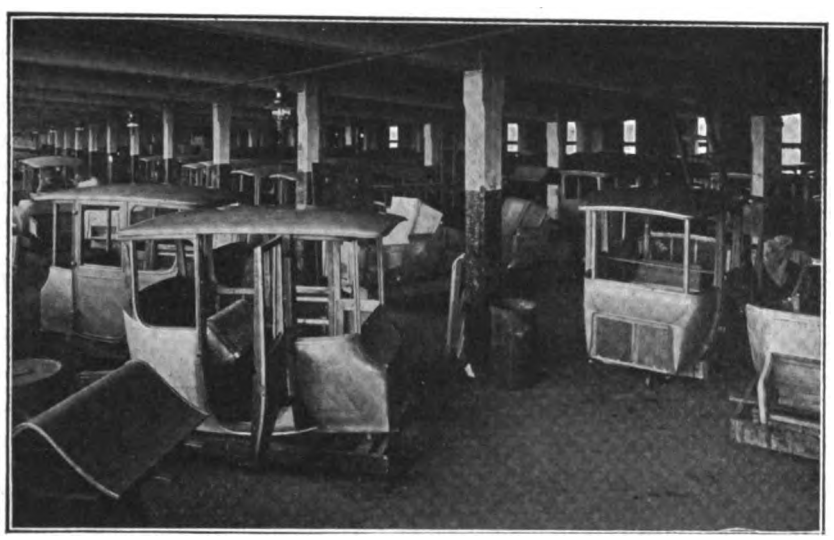
The Harper Tire & Rubber Company has been formed at Canton, O., for the manufacture of automobile tires in that city. The capital stock is $100,000 and the concern is composed of Warren D. Harper, James Thomas and Albert H. Vayo.

The Motsinger Devices Company, Lafayette, Ind., has attracted attention by issuing a challenge to hold an open competition among the carburetor makers of the United States in an "energy and economy" race, the winner to be declared the carburetor champion. To carry on such a project Homer N. Motsinger, the inventor of the new carburetor, has deposited $1000 to help defray the expenses of such a race.

The Palmer & Singer Company, maker of Palmer-Singer cars, has invaded the Canadian field. A salesroom has been secured at Montreal by Druet & Page, sales agents of the car, and parts will be sent there for assembly into complete machines for the Dominion market.

The Auto Tire & Vulcanizing Company, capitalized at $3000, has been formed to manufacture a patented tire at Grand Rapids, Mich. Emil Tisch, president of the Grand Rapids Cigar Box Company, is president of the new concern; I. N. Space is vice president and O. H. Goldsmith is secretary and treasurer.

The Bridgeport Auto Company, Bridgeport, W. Va., is a new concern formed to manufacture automobiles, air-



Interior of the Aluminum Plant of the Anderson Electric Car Company, Detroit.

ships and motor boats and the old Crystal glass plant at that place is being remodelled for the new company's factory.

The Knickerbocker Motor Truck Manufacturing Company, New York City, has completed arrangements for issuing new stock and has already sold $250,000 of its issue. The intention is to erect a larger factory in the Bronx, capable of turning out about 150 trucks a year, which is about treble the present capacity. The company has been in business 18 months.

The Prest-O-Lite Company has purchased a plot of land at St. Louis Park, a suburb of Minneapolis, Minn., where it will erect a large manufacturing plant at a cost of about $100,000.

The Bowling Green Motor Car Company, Bowling Green, O., has secured R. K. Johnston, formerly connected with the Garford Company, Elyria, O., to take charge of the manufacturing end of the business.

The B. F. Goodrich Company, Akron, O., maker of Goodrich tires, has filed papers with the secretary of state reducing the capital stock of the Goodrich concern from $200,000 to $10,000. Since the merger of the Goodrich and Diamond companies a separate corporation has been formed under the laws of another state.

The Lewis Electric Welding & Manufacturing Company, West Toledo, O., is to build a new gray iron foundry to supply castings used in the construction of motor parts made by the concern.

Thomas J. Holland, designer and patentee of a new style of flexible wheel for motor cars and trucks, has organized a company at Antigo, Wis., to manufacture and market the wheel. The corporate name is Holland Flexible Auto Wheel Company and the capital stock is $10,000. James L. Donahue and John E. McKenna are associated in the concern with Mr. Holland.

The Universal Motor Truck Company, Detroit, maker of Universal trucks, has begun work on a new addition to its factory. The plant will be practically doubled in capacity and the cost of new buildings will be $250,000.

TRADE PERSONALS.

W. B. Jameson, who has been with the Maxwell-Briscoe Motor Company since 1904, has resigned his connection with the Maxwell Motor Company, Inc., which succeeded the United States Motor Company, of which corporation the Maxwell-Briscoe Motor Company was a part. Mr. Jameson, who has received a number of excellent offers of positions since it became known he was available, has not yet decided which line of work he will take up.

H. B. Willower, who has for the past two years represented the Gramm Motor Truck Company, Lima, O., maker of Gramm trucks, throughout Illinois, Indiana, Kentucky and Michigan, has joined the sales staff of the Gramm-Bernstein Company, Lima, maker of Gramm-Bernstein trucks. Mr. Willower is one of the most successful salesmen in the motor truck field.

Glenn W. Barden has been appointed secretary and treasurer of the Kelly-Springfield Motor Truck Company, Springfield, O., maker of Kelly trucks. He was formerly auditor of the Warren Motor Car Company, Detroit, maker of Warren cars.

Ray Longacre has joined the sales department of the Star-Tribune Motor Sales Company of Detroit, distributor of Star trucks and Tribune pleasure vehicles.

The Anderson Electric Car Company, Detroit, maker of Detroit electric pleasure cars and trucks, is justly proud of its aluminum plant, in which special presses and automatic hammers have been designed by the company's engineers to handle and form the large aluminum plates to fit the special contours of the Detroit electric bodies. The panels, roofs, window sash, and even the hub caps are now made of this metal. The Detroit plant covers 12 acres of floor space, two large additions having been added recently, while the motors and electrical equipment are produced at the old factory of the Elwell-Parker Electric Company of America in Cleveland.

The Hupp Motor Car Company, Detroit, maker of Hupmobile cars, has announced the resignation of Harry Fosdick as director of sales, that position having been abolished by the company, according to Frederick A. Harris, assistant general manager, who has active supervision over the field policies of the concern. He states that the abandonment of the position of director of sales will entail no further changes or additions to the sales department. R. G. Neighbors, the present sales manager, will continue in charge with his present force.

The Willard Storage Battery Company, Cleveland, O., maker of Elba storage batteries, recently placed its sixth repeat order for Bruce-Macbeth gas engines to be used in furnishing power for operating its plant. Since the installation of the first engine six years ago the company's increasing business has made necessary a new power unit every year.

The Esterline Company, formerly of Lafayette, Ind., has moved its entire plant to Indianapolis, Ind., the new address in that city being 227 East South street.

William E. Barker, formerly president and treasurer of the Enterprise Rubber Company, Boston, Mass., has been appointed sales manager of the United States Rubber Company, with offices at New York City.

Joseph Tracy, consulting engineer of New York City, has again moved his laboratory in Rutherford, N. J., to larger quarters as a result of the increasing demand for demonstration and development testing. At the new plant six to eight motors may be tested simultaneously.

H. T. Latto, for several years connected with the sales department of the National-Acme Manufacturing Company, Cleveland, O., has been appointed eastern sales manager to succeed L. M. Waite. He will have charge of the eastern office and warehouse at 77 White street, New York City, and will direct the sales organization in eastern Pennsylvania, eastern New York, New Jersey, Maryland and Virginia.

P. J. Dasey, long connected with the Motsinger Devices Manufacturing Company, Lafayette, Ind., has been made manager of the Detroit branch of the Hartford Suspension Company, where he will handle Hartford electric starters and Truffault-Hartford shock absorbers in the Michigan territory. His headquarters will be at 803 Woodward avenue.

Charles B. Shanks, general sales manager of the

Digitized by Google

Kelly-Springfield Motor Truck Company, Springfield, O., has left the factory for a long trip throughout the western part of the country. He will visit all the principal Kelly truck branches and agents west of Chicago.

B. M. Sparks, who has been closely identified with the automobile industry for many years, has been engaged as travelling salesman in Nebraska with headquarters at Omaha, for the Haynes Automobile Company, Kokomo, Ind., maker of Haynes machines.

B. F. Schmidt and L. R. Ingabrand have been advanced from foremen's positions to those of superintendent and assistant superintendent, respectively, in the factory of the Speedwell Motor Car Company, Dayton, O., maker of Speedwell motor cars and trucks. Both men have been with the company since its inception. The former was foreman of the chassis assembling department, and the latter of the final assembling department. Jacob Neibert succeeded Mr. Schmidt as foreman of chassis assembly. The changes came as the result of the resignation of Superintendent Dunston.

N. S. Hopkins has resigned his position with the American Locomotive Company's automobile plant at Providence, R. I., where he had charge of the main manufacturing department the past year.

The Hupp Motor Car Company, Detroit, maker of Hupmobiles, finds that even with the addition of the old Grabowsky motor truck plant, which was taken over in February, it still has insufficient room to keep abreast of its orders. Recently a large tent was added for the use of the assembling and testing departments. An accompanying illustration indicates the present activity at the plant, which is now producing 100 cars a day. The business done in April showed an increase of nearly 100 per cent. over any other month in the history of the company.

Frank B. Willis, numbered among the veterans in the automobile industry, having first commenced the sale of cars in 1900, has been appointed general factory representative in all territory east of Denver, Col., for the Lozier Motor Company, Detroit, maker of Lozier cars.

Herbert P. Choate has become sales manager of the Star Motor Car Company, Ann Arbor, Mich., maker of Star trucks. He was formerly connected with the Empire Tire Company, Trenton, N. J. He has made arrangements with George C. Hupp and J. E. Hannon, the latter formerly secretary of the Michigan state fair, to act as Michigan distributor for the Star trucks. They have formed the Star-Tribune Motor Sales Company with headquarters at 815 Woodward avenue, Detroit, where Mr. Choate will be located. Mr. Hupp announces that he is still connected with the R-C-H Corporation, having resigned as an officer to become connected with the manufacture of the Tribune car, a new machine on the market.

F. A. Wade, formerly purchasing agent of the Flanders Motor Company, Detroit, maker of Flanders cars, has been made general purchasing agent of the Maxwell Motor Company, with headquarters at the executive offices in Detroit. Mr. Wade has been associated with Walter E. Flanders for many years, having been with him originally in the Ford Motor Company, and later purchasing agent of the E-M-F company and the Studebaker Corporation in succession.

William Sternberg, engineer of the Sternberg Manufacturing Company, West Allis, Milwaukee, Wis., maker of Sternberg trucks, recently sailed from New York City for a tour of Europe to last several months. He expects to make the trip one of business and pleasure, visiting the more important points in the manufacture of motor trucks abroad, and investigating closely the features and conditions of the industry in general.

E. L. Baker has been appointed resident engineer for the Pacific Coast territory with headquarters at San Francisco, Cal., for the H. H. Franklin Manufacturing Company, Syracuse, N. Y. He was formerly in charge of the mechanical laboratory at the home factory. A. C. Raaflaub, who has been handling the coast territory for the past six months, will return East.

R. D. Maxwell has been appointed manager of the Studebaker branch retail store at Los Angeles, Cal.

George A. Crittenden, for a number of years connected with the Boston branch of the Lozier Motor Company, Detroit, maker of Lozier cars, has been appointed manager of sales of a Boston office established by the new Chandler Motor Car Company, Cleveland, O., maker of Chandler cars. Mr. Crittenden attained great success with the Lozier company, having on Jan. 1 been declared the winner of the annual prize among all Lozier salesmen. The officials of the Chandler company were all until recently executives of the Lozier company and were familiar with Mr. Crittenden's fine work.

William Ziegler, Darien, Conn., is having a large garage erected which will cost $150,000. It will be equipped with all modern appliances, including electric elevator, etc.

George A. Kershner, owner of the Berkley garage at Martinsburg, W. Va., is to erect a large garage on West King street. It will be modern throughout and will cost $32,000.

J. R. Bradford has taken a position on the sales force of the M-B-M Company, Boston, distributor of the Maxwell line. He resigned recently from another company after five years as its assistant manager.

Frederick D. Markee has resigned his position with the Oakland Motor Company, Boston, with which concern he has been identified for the past three years. He is now connected with the M-B-M Company, agent for the Maxwell pleasure cars and the Hercules trucks.

W. H. Harsh, formerly general manager of the Kelly Island Lime & Transportation Company, has been appointed assistant general manager and assistant treasurer of the Sandusky Auto Parts & Motor Truck Company, Sandusky, O.

W. C. Devereaux, formerly factory salesman of the Chalmers Motor Company, Detroit, has become identified with the Keeler Bros. Company of Grand Rapids, Mich.

George Walker, formerly sales engineer of the Muncie Gear Works, Muncie, Ind., is now chief engineer of the Benton Motor Car Company, Benton, Ill.

F. M. Headlee has succeded A. C. Lusby as manager of the Chalmers-Los Angeles Company, Los Angeles, Cal.

J. Q. Goudie, for some time manager of the Detroit branch of the Diamond Rubber Company, Akron, O., has become associated with the Pennsylvania Rubber Company, Jeannette, Penn., in charge of Michigan and Ohio territory, with headquarters at Detroit.

J. H. McDuffee has been appointed manager of the San Francisco branch of the F. B. Stearns Company, Cleveland, O., succeeding J. F. Toole, who goes to Atlanta, Ga., to look after the Stearns interests in the South.

Indicating the Every Day Activity at the Factory of the Hupp Motor Car Company, Detroit.

George Holsworth has been appointed sales manager of the E. Stewart Automobile Company, San Francisco, northern California distributor of the S. G. V. cars.

S. J. Cole has been engaged as factory manager by the Parish Manufacturing Company, Detroit.

D. A. Burke is the new manager of the Cleveland branch of the Buick Motor Company, Flint, Mich., maker of Buick cars.

C. F. Kircher has been chosen manager of the truck department of the Pacific Car Company, Seattle, Wash.

A. W. Bartlett has been made manager of the recently incorporated Velie Motor Car Company, St. Louis, Mo. W. J. Carter and C. F. Swartz are also connected with the company.

Y. D. Rose, 34 Rue Du Mont-Thaber, Paris, France, has been appointed the sole distributor for France of Boyce Motometers. He will have his headquarters at Paris.

M. E. Morris has been appointed Pacific Coast manager for the Goodyear Tire & Rubber Company, Akron, O., to succeed W. T. Powell, who has resigned. F. E. Carroll remains manager of the local branch at San Francisco.

M. A. Magee, who for several years has been connected with the Motz Tire & Rubber Company, Akron, O., maker of Motz tires, has succeeded P. M. Pontius as sales manager. Mr. Pontius is specializing in the work of the electric pleasure car tire and is now manager of that division.

L. W. Pitcher has been appointed manager of the branch of the Columbus Buggy Company at Minneapolis, Minn.

E. H. Reynolds, Jr., formerly connected with the Warren Motor Car Company, has joined the Champion Ignition Company, Flint, Mich., as eastern representative.

Digitized by Google

A. G. Seiberling has been appointed general manager of the Haynes Automobile Company, Kokomo, Ind., maker of Haynes cars, to succeed C. B. Warren. This is one of the most important announcements made by the Haynes company in some time. Since October, 1912, Mr. Seiberling has been connected with the Haynes concern as factory manager and he assumed his new duties June 1. His executive ability has been demonstrated in various lines of endeavor extending over a period of 25 years. He was born at Akron, O., the home of the automobile tire and accessory industry, and after becoming familiar with the products of that city he removed to Kokomo in 1887 to take a position in the bookkeeping and purchasing departments of the Kokomo Strawboard Company. Six months later he was appointed treasurer and purchasing agent of the Diamond Plate Glass Company, an office he held until 1895, when the company was absorbed by the Pittsburg Plate Glass Company, Pittsburg, Penn., Mr. Seiberling then becoming identified with the parent concern as general purchasing agent with headquarters at Pittsburg. He next became interested in the rubber industry and moved to Peoria, Ill., where he organized the Peoria Rubber & Manufacturing Company in 1896. This concern developed into a successful enterprise and was consolidated with the American Bicycle Company in 1900. Mr. Seiberling then became financially interested in the Great Western Plate Glass Company of Ottawa, Ill., and remained with the concern until it was sold in 1905. He returned to Kokomo and has since been connected with various automobile manufacturers in an executive capacity.

A. G. Seiberling, General Manager, Haynes Automobile Company.

H. E. Dove, who has been connected with the Buick Motor Company, Flint, Mich., maker of Buick cars, in the capacity of first assistant to former Sales Manager H. E. Shiland, and later as Cleveland representative, has resigned his position and has become distributor for California and the Pacific Coast in general, with headquarters at San Francisco.

The Vaughan Car Company, as announced recently, has been organized to resume the production of Vaughan cars in the old factory of Wyckoff, Church & Partridge, Inc., at Kingston, N. Y. The following officers have been elected: President, A. B. Cordner; vice president and general manager, Orlando Weber; treasurer, H. W. Johns; secretary and sales manager, Ernest S. Partridge; consulting engineer, Chester Griswold; directors, Britton N. Bush of Hollins & Co., banker; Howard Dickinson, Kearney & Dickinson, lawyer; William Swan, capitalist; George A. Ellis, Booth & Ellis, lawyer; H. Walter Webb, capitalist; Orlando Weber, A. B. Cordner, Equitable Life Assurance Company; H. W. Johns, capitalist; Chester Griswold, E. S. Partridge.

Orlando Weber, General Manager, Vaughan Car Company.

By the election of Orlando Weber as vice president and general manager the company secures the services of a man of long experience in the automobile business. Since its inception he has been most active in both the manufacturing and sales departments of the business. He will make his headquarters at Kingston and will be in direct charge of the new undertaking. It is understood that plans have been made for the production of 500 machines for the 1914 season and that these will be designed to meet the demand for a popular priced six-cylinder car.

C. H. Colstad, who for the past year has been factory representative for the Lozier Motor Company, has resigned from that company to take a position with the newly organized Chandler Motor Car Company at Boston.

A. E. Schaefer has been chosen as the active executive in charge of the affairs of the Abbott Motor Company, Detroit, maker of Abbott-Detroit cars. He was formerly with the Ohio Motor Car Company and the Sherwin-Williams Paint Company.

Wallace C. Hood, sales manager of the Westcott Motor Car Company, Richmond, Ind., is making a trip through the Pacific Coast territory, visiting Salt Lake City, Sacramento, San Francisco, Oakland and Los Angeles. On the return trip he will visit Portland, Seattle and Tacoma.

Norman Flowers has become sales manager of the American Distributing Company, Jackson, Mich. The company handles the products of a number of parts and accessories manufacturers.

Francois Richard, formerly manager of the Only Motor Car Company, which operated a factory at Fort Jefferson, N. Y., has opened offices at 1926 Broadway, New York City. His new concern is called the Only Carburetor Company.

Lawrence R. Wilbur, a prominent member of the Indianapolis motor world, has been made assistant general manager of the Empire Automobile Company, Indianapolis, Ind., maker of Empire cars, popularly known as the "Little Aristocrat." Mr. Wilbur has been identified with the automobile industry since 1908, when he became connected with the Willys-Overland Company, Toledo, O. In the fall of 1910 he went to Indianapolis and as secretary-treasurer helped to organize the Marion Sales Company, which at that time sold the entire Marion output. When in July the new Marion Motor Car Company took over the sales and manufacturing of Marion cars, the new A. & M. Sales & Service Company of Indianapolis, Marion and American distributor, was organized with Mr. Wilbur as secretary-treasurer. In his new connection with the Empire Automobile Company he will have direct charge of the business management of the company's executive office and this will permit C. E. Gibson, general manager, to devote more time to the production of the plant which, in view of the extensive enlargement planned for next year, is of the utmost importance.

Lawrence R. Wilbur, Assistant General Manager, Empire Automobile Company.

W. H. Lally of the export department of the Studebaker Corporation, has returned to Detroit after a trip of six months around the world, during which he visited nearly all the Studebaker agencies.

Carl Neracher, chief engineer of the Willys-Overland Company, Toledo, O., maker of Overland cars, has gone to Europe for a needed rest. Incidentally he will examine European conditions and engineering practise.

E. P. Weber, formerly general sales manager of the Walpole Tire & Rubber Company, Boston, Mass., maker of Walpole tires, has resigned from the organization.

H. P. Thompson, formerly of the branch of the B. F. Goodrich Company at Houston, Tex., has taken a position with the Houston Motor Car Company, Cadillac distributor. He will have charge of the tire and accessory department.

A. L. Bennett has become sales manager at New York City for the Abbott Motor Company, Detroit, maker of Abbott-Detroit cars.

F. D. Geraghty has been appointed general manager and president of the Imperial Motor Tire Company, Washington, D. C., recently incorporated for $100,000. The principal offices will be at 1112 Connecticut avenue.

F. J. Barr, shown in the accompanying illustration, is one of the most progressive distributors of Flying Merkel

Digitized by Google

motorcycles in the country. He has as his territory the State of Iowa and has been the source of some embarrassment to the maker of these mounts, the Miami Cycle

Interior of Salesroom Maintained by F. J. Barr, Iowa Distributor for Flying Merkels.

& Manufacturing Company, Middletown, O., because of his energetic sales campaign in that district. The company is authority for the statement that Mr. Barr could easily have sold 1500 machines in Iowa this season, but because of the press of orders from other parts of the country he could not be supplied with the necessary number. With the constantly increasing size of the Merkel plant this difficulty will soon be overcome and the production will be increased sufficiently to meet all demands, such as those made by Mr. Barr.

J. M. Thornton has returned to Seattle, Wash., as manager of the McKenna-Marmon Company, agent for Inter-State cars.

Charles Basle, the racing driver, has been secured by A. H. Sowers to take charge of the assembling plant of the Sowers Motor Truck Company, Boston, Mass.

C. C. Edwards, who has managed branches and agencies in Boston, Mass., has taken charge of the eastern territory for the Midland Motor Company, East Moline, Ill., maker of Midland cars.

The Buick Boston Company has added to its sales force A. M. Marston, Roscoe B. Davis and J. G. McMurray, all of whom have been identified with Boston companies for several years.

W. J. Doughty recently allied himself with the sales department of the E. B. Newton Auto Company, Detroit, Mich., distributor of Havers cars, made by the Havers Motor Car Company, Port Huron, Mich.

C. F. Redden has been promoted by the Maxwell Motor Company to have charge of the Philadlephia, Baltimore, Washington and Richmond, Va., territory in addition to the New York branch district. This gives him jurisdiction over territory from the New York-Canada line to North Carolina.

George F. Conant is the new manager of the Oakland Motor Company's branch at Houston, Tex. He was previously stationed at San Antonio, Tex., by the same company.

C. G. Wilson was recently appointed general sales manager of the Midland Motor Car Company, East Moline, Ill., maker of Midland cars. He has had wide experience and should prove a valuable asset to the company.

E. T. Backus, formerly assistant branch manager of the Ford Motor Company at Houston, Tex., has been promoted to the managership of the Dallas branch, succeeding H. C. Apgar, who resigned to enter business for himself.

J. K. Stewart announces that he has not retired from active participation in the affairs of the Stewart-Warner Speedometer Corporation and the J. K. Stewart Manufacturing Company, as was widely reported.

L. V. Fletcher, who has been making a carburetor used chiefly by the Mercer Automobile Company, has sold the manufacturing rights, it is said, to the Trenton Brass & Machine Company, Trenton, N. J., so that hereafter that concern will make the carburetors in larger quantities.

F. R. French has been appointed factory representative of the Willys-Overland Company, Toledo, O., maker of Overland cars. He will cover the State of California and his headquarters will be at San Francisco.

Hugh Chalmers, president of the Chalmers Motor Company, Detroit, maker of Chalmers cars, recently underwent an operation for appendicitis at Harper hospital, Detroit. The operation was successful.

T. H. Lee, formerly auditor of the Rubber Goods Manufacturing Company, has become assistant treasurer of the United States Tire Company. He succeeds to the duties of N. R. Feltes, who resigned not long ago to become treasurer of the Lozier Motor Company, Detroit, maker of Lozier cars.

George H. Mayo, formerly with the Hubmark Rubber Company, is now manager of the Enterprise Rubber Company at Boston.

Harry S. Houpt, who has formed the Harry S. Houpt Company to take over the Lozier agency in New York City, has this organization: Treasurer, I. H. Westervelt, formerly with the Alco; city sales manager, A. J. Diefenderfer, formerly with the Lozier; assistant city sales manager, Charles D. Weed, formerly with the Alco; general service manager, Frank S. Coleman, formerly with the Garford and Alco; purchasing agent, A. C. Gundlach, formerly with the Lozier; salesmen, E. C. Bull, formerly with the Lozier; Frank D. Garringer, formerly with the Thomas; shop foreman, Jacob Nagel, formerly with the Lozier.

NEW CONCERNS.

The Kolb Sales Company, with offices in the United States Rubber building, Fifty-eighth street and Broadway, New York City, was recently organized to represent the interests of different automobile accessory and specialty manufacturers in the eastern territory. Milton B. Kolb, who has been identified with various branches of the industry the past 10 years, is at the head of the new organization.

The Wright-Callender-Andrews Company, Los Angeles, Cal., has leased its garage building at 23 East Fifth street to L. H. Larson, who will operate a garage.

The De Dion-Bouton Selling Branch, New York City, has moved its show rooms to 1612 Broadway, on the northeast corner of Fifty-second street. The garage and repair department is located at 110 West Fifty-fourth street.

The Detroit Automobile Exchange, Inc., a new organization formed to deal exclusively in used cars of high grade, has opened for business at 294 Jefferson avenue, Detroit, where large and well equipped quarters, commodious enough to handle 200 cars, have been obtained in the Sievers & Erdman building. It is a close corporation and the incorporators are: Grover C. Farnsworth, general manager; Everett W. Pingree, secretary and treasurer, and Robert M. Drysdale. Mr. Farnsworth, who will devote all his time to the business, is widely known in the automobile industry, his experience covering several departments.

F. S. Cheesborough, Augusta, Ga., recently opened a new garage and automobile repair shop at 548 Broad street.

The Co-Operative Garage, Toledo, O., has opened for business at 318 Columbia street. The plant is completely equipped.

Matthew Kacjenhausen, Jr., White Bear, Minn., has opened a new garage and repair shop on Banning avenue.

Kershner & Conn, Richmond, Cal., has opened a new garage on Seventh street, north of Macdonald avenue.

J. J. Laverty, New Haven, Conn., has leased the Bradford garage at 400 Crown street. The plant is modern and well equipped and Mr. Laverty will make a specialty of Moon cars, made by the Moon Motor Car Company, St. Louis, Mo.

The East Nashville Auto Company, East Nashville, Tenn., has opened a large and handsomely equipped garage at 112 Woodland street, with a capacity of housing 200 cars. The Regal cars, made by the Regal Motor Car Company, Detroit, will be carried.

The General Electric Company, Schenectady, N. Y., has inaugurated a new departure that is expected to prove of benefit to automobile owners all over the country and whereby all types of electric lamps may be obtained readily. This is the establishment of service stations which will be stocked with all types of lamps to suit any particular lighting system with which the car is equipped. Different systems, sometimes, call for a slightly different kind of bulb and the variety carried by these

Signs Designating General Electric Company's Service Stations or Agents.

houses will enable the selection of that which will make for the most efficient and satisfactory service. The signs shown herewith are utilized to indicate either a service

Digitized by Google

station or an agent and should prove of convenience to motorists, resulting in a saving of much valuable time which might otherwise be wasted in searching for an establishment that could fill their needs. Another example of good service rendered by the General Electric Company is that of putting up electric lamps in a compact, leatherette case. In this there are headlights, side and rear lights, fitting snugly, each lamp in a separate holder. The whole case measures only a few inches over all and takes up little room.

The Riddell Automobile Company, Fourth and Grand streets, Des Moines, Ia., distributor of Overland cars, made by the Willys-Overland Company, Toledo, O., on June 1 changed its name to that of the Clemens Automobile Company. There will be no change in the management and the stockholders will remain the same as for the past four years. A. Clemens is president, R. J. Clemens is secretary and manager and M. M. Hamilton is treasurer.

The United States Garage Company, Toledo, O., is to occupy the ground floor of the Meredith building at Jefferson avenue and Michigan street. A general garage business will be conducted under the firm name of the City garage.

R. L. Dalsell, San Bernardino, Cal., has purchased the Highland garage of Lavering & True, and is operating the business.

The White Garage Company, Santa Paula, Cal., has changed hands, Spicer & Winsor having taken over the business.

Kiemer Bros., Owatonna, Minn., has leased the new garage building on West Bridge street.

J. E. Smith, Clovie, N. M., has purchased a garage on West Grand avenue and will conduct the business under the firm name of the Clovie garage.

The Electric Service Company, Indianapolis, Ind., under the management of T. H. Watts and W. C. Brooks, has opened a new electric service station at Meriden and Walnut streets. It is claimed to be the first exclusive electric garage and service station in the state.

The Grady Rousche Motor Car Company, Salt Lake City, Utah, has opened for business at 473-475 South Main street. The company will feature Reo cars, made by the Reo Motor Car Company, Lansing, Mich., and will carry a full line of parts and the necessary shop equipment.

Loomis McA. Goodwin of the Raleigh Motor Car & Machine Company, Raleigh, N. C., will open a new service department in charge of R. J. Cannon.

The Herreshoff Motor Car Company of Kansas has opened a new state agency for Herreshoff cars, made by the Herreshoff Motor Company, Detroit, at 932 Kansas avenue, Topeka, Kan.

The Frenier Auto Company, Rutland, Vt., has established a modern plant at 89 Cleveland avenue. Repair work of all kinds is done.

The State Garage, Waterbury, Conn., formerly owned by P. H. Carroll and John F. O'Brien at West Main and State streets, has been sold to Mr. Bishop of New Haven, Conn. The price paid is said to be about $48,000.

Percy Thelan, Santa Ana, Cal., has established a modern machine shop and garage at 710 East Fourth street.

F. Van Fosen, Sisson, Cal., has purchased machinery for his proposed new repair shop and garage and work has been started on the new plant.

R. G. Baker and A. Harroden, Yreka, Cal., have purchased the garage and machine shop formerly conducted by Castro Bros., and will operate it.

B. B. Ownby, Lordsburg, N. M., is now the sole owner of the garage formerly conducted by Ownby & Wallace.

Eugene Smith has opened a new garage at Enosburg Falls, Vt., succeeding L. D. Hart.

The Chase Garage Corporation, Bridgeport, Conn., has been incorporated to enter business with a capital of $2000.

Arthur Waterman is now general manager of the G. C. Vaporizer Company of America, Inc., 1790 Broadway, New York City, recently organized to produce the G. C. vaporizer, a device for using kerosene and the heavier products of petroleum as fuel for motor cars, motor trucks, motor boats and practically all internal combustion engines. Mr. Waterman has been connected with the automobile industry practically since its inception and has had a highly successful career. He is perhaps best known as a result of his record as manager of the advertising and sales departments of the Hartford Suspension Company, Jersey City, N. J., maker of the Truffault-Hartford shock absorber, which position he held for six years. During his incumbency his progressive methods and keen insight into the exigencies of the business served to create a large and insistent demand for the company's product, thereby greatly increasing the output of its factory and necessitating provision for additional manufacturing facilities. Mr. Waterman resigned his position last winter and has been closely identified since that time with the organization of the G. C. Vaporizer Company of America. His many friends in the industry are congratulating him upon his advancement and judging from his past record there is every reason to believe that his future success will be as pleasing to them as is the contemplation of his previous achievements.

Arthur Waterman, General Manager, G. C. Vaporizer Company.

J. A. Crenshaw, formerly in the garage business at Largo, Fla., proposes to open an automobile establishment at St. Petersburg, Fla.

The Giant Tire Company, recently incorporated, has opened headquarters at 1205 Farnam street, Omaha, Neb. Factory seconds will be carried.

NEW GARAGES.

J. I. Phillips of 4216 Pasadena avenue, Los Angeles, Cal., plans building a one-story garage at Pasadena avenue and Avenue 34.

John Sagness, Morton, Minn., is president of a stock company recently formed to erect a fireproof garage to cost $8000.

U. G. Robinson of 3730-42 Sullivan street, Bridgeport, Conn., has plans and a permit for the erection of a one-story garage to cost $2700.

M. J. McGovern of the Hibbing Automobile Company, Hibbing, Minn., has plans for a new garage and repair shop. He handles the Ford cars.

The Fleischmann Company of 515 Park avenue, New York City, has plans and a permit for a garage to be erected at Webster avenue and One Hundred and Eighty-fourth street, to cost $18,000.

Albert Muffatt of 1411 Second street, Detroit, Mich., has plans for a new garage on Milwaukee street to cost $4000.

Clyde S. Adams, Philadelphia, Penn., is preparing plans for a garage at Stillman and Oxford streets.

Grosse Bros., 1724 Elm street, Cincinnati, O., has invited bids for the building of a two-story garage to cost $5000.

E. O. Olsen, Hector, Minn., has plans for a new garage to be erected soon.

E. H. Broadwell, who recently resigned as vice president of the Hudson Motor Car Company, Detroit, maker of Hudson cars, has assumed the vice presidency of the Fisk Rubber Company, Chicopee Falls, Mass., maker of Fisk tires, with whom he was for many years associated before going to the Hudson company. Mr. Broadwell's headquarters will be at the main office of the Fisk company at Chicopee Falls, and he will devote his personal attention to the direction of the sales department. Mr. Broadwell has made a successful career for himself in the automobile industry and his knowledge of tire manufacture was gained by years of connection therewith, during which he made the business a serious study. His work at Detroit for the Hudson company gained him recognition as a progressive, indefatigable worker and no details of his department were neglected. His acquisition by the Fisk staff, while in the nature of a return to his former scene of activity, is a decided source of gratification to that company, the organization of which is decidedly strengthened thereby.

E. H. Broadwell, Vice President, Fisk Rubber Company.

J. E. Hugg & Co., 445 Military street, Detroit, Mich., has plans for a new garage to be erected at Dix street, near Military street. It will be occupied by R. L. Thiesen of 438 Dragoon street.

A. Kolinski of 336 Brady street, Milwaukee, Wis., has plans and a permit for the erection of a new garage to cost $6000.

The Greenwood Cemetery Company, Fifth avenue and Thirty-fourth street, Brooklyn, N. Y., will erect a new stable and garage at Fifth avenue and Thirty-sixth street to cost $20,000.

J. Floyd Halstead, Goshen, N. Y., has purchased property on Main street, that place, for a new garage to be erected soon.

George E. Collins has purchased property on Virginia street, Waterloo, N. Y., upon which he will erect a brick and concrete garage.

Lubbe & Jones, San Francisco, Cal., has secured a permit for the establishment of a new garage at Taylor and Bush streets.

The E. L. Goldstein Company & Steinberger, San Francisco, Cal., will erect a fireproof automobile building at Van Ness avenue and O'Farrell streets. It will be five stories high and will cost $80,000.

J. W. Stover has plans for the erection of a one-story garage at 171-175 Pleasant street, Boston, Mass., to cost $30,000.

V. V. Haldacker, Danville, Penn., has purchased property on Canal street upon which will be erected a modern building. A garage and repair shop will soon be opened.

W. T. Phillips has plans for a new garage and machine shop on Canal street at Hinsdale, N. H.

Fred E. Hyde, Binghamton, N. Y., has purchased a site on Water street, on Noyes Island, for a new garage, now being erected.

H. J. Altwater, 294 Bainbridge street, Brooklyn, N. Y., has plans and a permit for a new garage at Bainbridge street and Patchen avenue.

The Alliance Motor Car Company, East Main street, Alliance, O., has plans for a new garage to cost 13,000.

Charles Barton Keene, Philadelphia, Penn., is preparing plans for a garage to be built at Villanova, Penn.

Albert Riegel, Calhoun and Main streets, Ft. Wayne, Ind., has let the contract for the building of a garage.

W. J. Bradshaw, 702 North Jefferson street, Springfield, Mo., has made a contract with the city to erect a garage and incinerating plant to cost $5000.

The United Gas Improvement Company, Philadelphia, Penn., is having estimates made for a garage at Forty-seventh and Market streets.

B. K. Baker, Jr., Boston, Mass., has let the contract for the erection of a one-story service station to be leased by the Mack Motor Truck Company.

George C. Noll, 6925 Delmar street, St. Louis, Mo., is to build a one-story garage to be 22 by 26 feet.

Henry Feldman, president of the Van Sicien Club Garage Company, 61 Elton street, Brooklyn, N. Y., contemplates building a two-story garage to cost $4000.

William Templeton, Washington boulevard and Wesley avenue, Oak Park, Ill., is to build a two-story garage and service station.

C. H. Tiffany, 96 Market street, Poughkeepsie, N. Y., has received estimates for building a one-story garage.

Dr. Edward J. Meyer, 669 Elmwood avenue, Buffalo, N. Y., has plans under consideration for the erection of a garage at Williamsville, N. Y.

Dr. H. B. Doust, 309 Summit avenue, Syracuse, N. Y., is to build a one-story garage to cost $1000.

The National Twist Drill & Tools Company, Brush street, near East Grand boulevard, Detroit, Mich., is to build a one-story garage.

Dr. J. C. Fleming, 123 West Marion street, Elkhart, Ind., has plans under way for a two-story garage.

K. B. Lemster, Toledo, O., has received bids for a one-story garage and service station to cost $8000. It will be leased to Henry Daull, 735 Indiana avenue.

The Badger Automobile Company, Mayville, Wis., has plans for the building of a two-story service station to cost $8000.

The White Automobile Company, Mt. Royal avenue and Hunter street, Baltimore, Md., has let the contract for an addition to its garage to cost $5000.

E. R. Hall and Frederick W. Sinclair, 1607 Ranstead street, Philadelphia, Penn., have awarded the contract for a one-story combination garage at Ridley Park, Penn.

Ernest Hillman, Oliver building, Pittsburg, Penn., has given the contract for the building of a garage at a cost of $7000.

Lessler Bros., 622 Smith street, Schenectady, N. Y., is building a garage to cost $1500 and to be one story in height.

A. Hughes, Moline, Ill., has plans being prepared for a two-story garage and apartment house.

The Felt & Tarrant Manufacturing Company, 1717 North Paulina street, Chicago, Ill., is having plans revised for a one-story garage and warehouse.

A. Young, Monmouth, Ill., has awarded the contract for the erection of a one-story garage at Galesburg, Ill. Work will begin soon.

The Bateman Machine Company, Atlantic City, N. J., has let the contract for the building of a one-story garage.

Otis Norcross, 50 Congress street, Boston, Mass., has let the contract for the erection of a one-story garage, the cost to be $12,000.

H. A. Crane & Bro., Jersey City, N. J., has secured the contract for the building of a two-story garage and supply house to cost $25,000.

Edward Binis, Murrayhill avenue and Woodland road, Pittsburg, Penn., has given the contract for a two-story garage to cost $8000.

Vernon Wolff, Louisville, Ky., is having a one-story garage built on River road, that city.

R. A. Long, Long building, Kansas City, Mo., has invited bids for a two-story garage at Hickman Mills, Mo.

Dennis Kelly, Front street, Columbus, O., is expending $5000 in the erection of a two-story garage, for which the contract has been let.

William Cady & Son, Corry, Penn., plans the building of a two-story garage and machine shop the present summer.

W. Park Moore, Elkins Park, Penn., will build a one-story garage to cost $2000.

Warren Unger, Shamokin, Penn., has received estimates for a three-story garage, 50 by 90 feet. It will cost $25,000.

Edwin P. Cerle, 520 Slater building, Worcester, Mass., has plans under way for a one-story garage.

William A. Baehr, 122 South Michigan avenue, Chicago, Ill., is considering plans for the building of a garage.

The Commonwealth Edison Company, Chicago, Ill., is to erect a one-story garage to cost $5000.

William A. Stewart, Camden, N. J., has plans under

Digitized by Google

way for alterations and additions to a three-story garage and apartment building.

F. Passman, 724 Comstock avenue, Syracuse, N. Y., has plans under way for building a one-story garage to cost $3500.

B. A. Echhart, 1330 Carroll avenue, Chicago, Ill., is to build a two-story garage and stable with apartments above, at a cost of $22,000.

Frederick Moeller, 3014 Lincoln avenue, Chicago, Ill., is to build a one-story garage.

John Zimmerman, Jr., 72 West Genesee street, Buffalo, N. Y., has awarded the contract for the building of a garage.

G. Miller, 404 Evans building, Bloomington, Ill., is preparing preliminary plans for a three-story garage to be 99 by 100 feet.

J. W. Aitken, 28 West Fifty-fourth street, New York City, is to build a $20,000 three-story garage, to be 25 by 62 feet.

Wisely & Short, 1838 Richmond street, West New Brighton, L. I., N. Y., has completed plans for a one-story garage to cost $5000.

N. R. Farwell, Chicago, Ill., is considering plans for an addition to his present garage.

Nathan Harris, 79 North avenue, Rochester, N. Y., has plans under way for a one-story garage which will cost $5000.

Marshall Field & Co., Chicago, Ill., is to build a two-story garage in which to house its fleet of motor vehicles. The cost will be $27,000.

Henry Strohrer, Sea Isle City, N. J., is planning the erection of a two-story concrete and frame garage for $3500.

J. A. Benjamin, National Cash Register Company, Rochester, N. Y., has plans under consideration for the building of a garage.

R. Knockenhauer, 1901 Bathgate avenue, New York City, contemplates the erection in the near future of a number of small garages.

William Bromstedt, 6440 South Green street, Chicago, Ill., is receiving bids for an addition to a one-story garage to cost $8000.

H. E. Stevens, 53 West Jackson boulevard, Chicago, Ill., has let the contract for a two-story garage to be 43 by 60 feet.

H. G. Tewes, 725 Waveland avenue, Chicago, Ill., has awarded the contract for the erection of a one-story garage to cost $8000.

A. C. Hanke, 2369 Milwaukee avenue, Chicago, Ill., has given the contract for the building of a one-story garage which will cost $9000.

E. Clifford Dinell has secured a permit to build a one-story garage at 2241-43 North Twenty-seventh street, Philadelphia, Penn., to cost $2850.

The St. Louis Country Club, St. Louis, Mo., is contemplating plans for a 2.5-story garage and service building to cost $15,000.

J. Wagman, Lake avenue and Marion place, Saratoga Springs, N. Y., has plans under way for the building of a one-story garage.

Herbert Hanna, 79 State street, Ogdensburg, N. Y., has received bids for the building of a one-story garage at Plattsburg, N. Y., at an expenditure of $10,000.

L. Humbert, 415 Pearl street, Sioux City, Ia., will soon have plans completed for the building of a two-story garage to cost $20,000.

Herbst & Hufschmidt, 301 Juneau building, Milwaukee, Wis., is preparing plans for a four-story garage and flat building, 50 by 110 feet.

L. German, Saginaw, Mich., has invited bids for the erection of a small garage.

J. Colner, Jr., 70 Virginia Park, Detroit, Mich., will build a one-story garage, 21 by 22 feet.

Louis E. Faulkner has secured permits to erect two one-story garages to cost $600 each at 548 and 550 East Washington Lane, Philadelphia, Penn.

Salinger Bros., Gary, Ind., is to build an additional story to the firm's present garage.

G. S. Steward, 1419 Maryland avenue, Baltimore, Md., has plans under consideration for the erection of a one-story garage at a cost of $38,000.

Dr. D. W. Mears, Mt. Pocono, Penn., is to build a two-story garage, 24 by 33 feet.

Frank Hoffman, Scranton, Penn., has plans under way for a one-story garage, which will cost $2000.

H. P. Wilhelmi, 6155 Columbia avenue, Philadelphia, is to build a one-story garage at an outlay of $2000.

Martin A. Brown, Sheffield road, Winchester, Mass., has awarded the contract for the erection of a 1.5-story garage to cost $10,000.

Edward F. Heyden, 2016 Cass street, Omaha, Neb., is taking bids for a one-story brick garage to cost $1000.

Nathan Haywood is considering plans by the Pomeroy Construction Company, Philadelphia, for a stone garage to be built at St. David's, Penn.

A. J. David, 215 Broad street, Elizabeth, N. J., has plans under way for a new garage.

Charles G. Haviland, 367 First avenue, Brooklyn, N. Y., is taking sub-bids for the building of a one-story garage to cost $3000.

New York City, department of parks, Forest Park, Queens, L. I., N. Y., has plans nearly completed for the building of a garage, stable and workshop to cost $75,000.

Dr. Everett Jones, 1658 Beacon street, Boston, Mass., is to build a two-story garage, 24 by 39 feet.

Edwards & Edwards, Philadelphia, has secured a permit, through Robert L. Rex, for a one-story garage to cost $700.

Francis B. Grinnell, Brookline, Mass., is to build a garage and stable at Charles River, Mass.

Leo Ziegler, 526 West Chicago avenue, Chicago, Ill., is receiving estimates for a one-story garage.

The Peoria Gas & Electric Company, Peoria, Ill., will soon take bids for the erection of a two-story utility building to comprise garage, stable and flat building.

Charles Watkins, Philadelphia, has plans for a stone, fireproof garage and stable to be built at Wynnewood.

Charles L. Gerds, 7357 Railroad avenue, Chicago, Ill., has received bids for the erection of a garage to be one story high and cost $6000.

A. S. Towlson, Jr., Philadelphia, Penn., has taken out a permit to build a two-story garage at the northwest corner of Mt. Pleasant and Anderson streets. It will cost $1500.

Seaman Bros., Hudson and North Moore streets, New York City, is having plans prepared for the remodelling of a church structure into a garage at a cost of $10,000.

NEW CHAMBER OF COMMERCE.

AS FAR as active work is concerned, the National Association of Automobile Manufacturers, organized 13 years ago, and the Automobile Board of Trade, organized two years ago, after the dissolution of the Association of Licensed Automobile Manufacturers, have ceased to exist and all affairs of both organizations are now transferred to the Automobile Chamber of Commerce. The first steps to bring about a consolidation were taken at a meeting in Chicago in 1912, when each of the associations appointed a conference committee.

The Automobile Chamber of Commerce was incorporated March 18 by the 14 men who had composed the executive committee of the N. A. A. M., and C. C. Hanch, the only director of the Board of Trade who was not also a member of that committee. The necessity of observing certain legal requirements delayed the actual transfer of all funds, records and books of both bodies to the new organization until now. All the departments of the old associations will be continued under the same management. S. A. Miles, for 10 years general manager of the N. A. A. M., retains that position with the new organization, with H. A. Bonnell as assistant general manager. The traffic department remains in charge of J. S. Marvin and the commercial vehicle work in charge of H. W. Perry, to whose department will probably be added a bureau of publicity with particular reference to the interests of good roads. The officers of the Chamber of Commerce are:

President, Charles Clifton; vice president, Wilfred C. Leland; vice president in charge of gasoline vehicle department, Hugh Chalmers; vice president in charge of commercial vehicle department, W. T. White; vice president in charge of electric vehicle department, H. H. Rice; treasurer, George Pope; secretary, R. D. Chapin; patent committee, C. C. Hanch, W. H. Van Dervoort, L. H. Kittredge, Alvan Macaulay, L. E. Latta; show committee, George Pope, H. O. Smith, Wilfred C. Leland; traffic committee, A. L. Pope, W. E. Metzger, H. H. Rice; legislative committee, J. N. Gunn, G. H. Stilwell, J. I. Farley.

The Pittsburg Automobile Dealers' Association will hold a pleasure car and motor truck display in October.

THE ACCESSORY AND GARAGE JOURNAL
Devoted Exclusively to the Automobile Trade and Allied Interests

VOL. III. JUNE, 1913. NO. 2.

AUTOMOBILE JOURNAL PUBLISHING CO.
Times Building Pawtucket, R. I.
William H. Black, Treasurer. D. O. Black, Jr., Secretary.
Publisher of
THE AUTOMOBILE JOURNAL THE MOTOR TRUCK

Offices in New York, Chicago, Detroit and Boston

SUBSCRIPTIONS:
The United States and Mexico, the year, $1 in advance; Canada and Foreign Countries in Postal Union, the year, $2 in advance. Fifteen cents the copy.

CONTRIBUTIONS.
Anonymous communications not considered. Correspondence on subjects relating to the motor industry and the trade will receive attention. Stamps must be enclosed to insure return of unsolicited contributions.

ADVERTISING:
Information supplied at request.

Advertising Copy for the ACCESSORY and GARAGE JOURNAL requiring submission of proof must be received by 5th of month to insure publication in issue of the 15th of month.

Advertising Copy, proof not required, accepted to morning of the day before publishing day (unless such day is Sunday or holiday, when previous day is limit) of each publication.

Entered as second class matter Dec. 30, 1911, at the postoffice at Pawtucket, R. I., under the Act of March 3, 1879.

USED CAR VALUES.

The matter of dealers securing what is considered a proper price for used cars is one that has provoked almost endless discussion and numerous conclusions have been given to the public. Perhaps one of the latest of these is the proposal to establish in various parts of the country central clearing houses to which can be taken used cars from a wide territory, to be offered for sale at their actual value. In effect it is proposed to establish a uniform rating for these machines.

The idea seems rather impractical, for the simple reason that a person contemplating the purchase of this nature is usually desirous of seeing the car before parting with his money. With the clearing house plan in force a buyer would be expected, where the distance was too great to make it profitable to travel, to send in his specifications, accompanied by a check, and receive in return a machine answering his description. It might be a good car to look at and still prove a poor bargain from the viewpoint of service. Only actual testing could determine this and every purchaser knows it.

Another and more forcible objection lies in the fact that the problem is essentially a local one and cannot be governed by a set of fast rules. A dealer who has a customer for a used car is able to make an allowance to the man who wishes to dispose of one, in accordance with the price he expects to receive. These figures will vary with each individual sale, making it impossible to fix a uniform rate, as would be the case with a new machine where the price is established by the manufacturer.

In every locality there are hundreds of used cars on the market, offering a wide choice to the purchaser, who can also enjoy the advantage of inspecting his proposed purchase. Every dealer is in business for himself and he generally exercises his own judgment in each case as to the price to be charged. He will naturally make the best trade he can, both in buying and selling, while the customer will also seek to obtain the best he can for his money. In short, every sale is governed by the immediate circumstances surrounding it, and that this condition will prevail in the future cannot be doubted. It is a local situation that cannot be nationalized and any attempt to place the trade in used cars upon a fixed, substantial basis, so far as maintaining prices is concerned, is predestined to meet with failure.

GARAGE CLEANLINESS.

The difficulty of securing trade and holding it in the face of sharp competition is a subject which has often been discussed by proprietors of garages, salesrooms and service stations. It is unnecessary to point out the need for carrying a line of seasonable and up-to-date products, for that already has been done, but there are other important factors which may well be considered.

Perhaps the chief of these is cleanliness. Many garage owners have neglected this feature, taking it for granted that because the customer had knowledge that the establishment was in effect a workshop he naturally expected to find more or less dirt, oil, etc. This is a serious error. It is easy to establish a system of work which permits of keeping a place free of dirt and by keeping tools and supplies in their proper places, a generally slovenly appearance is superseded by one of refreshing neatness. This, together with courteous treatment of customers, creates a decidedly favorable impression of progressiveness, and not only serves to retain patronage, but is a perpetual advertisement to attract new business.

As predicted some time ago would be the case, the kerosene car has arrived and the maker who offers this type of carburetor appears to have every faith in its possibilities, as two of these machines are to take part in the transcontinental tour of the Indiana manufacturers.

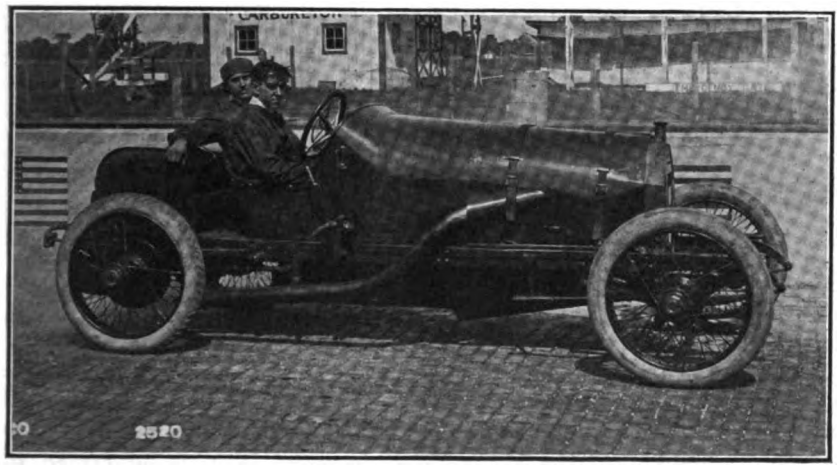
GOUX TAKES CHIEF SPEEDWAY HONORS.

JULES Goux of France, driving a French built Peugeot car, won the third international sweepstakes race on the Indianapolis speedway, Memorial Day, his speed being 75.92 miles an hour, as against 78.73 for Joseph Dawson in a National last year, and 74.65 for Ray Harroun in a Marmon in 1911. Spencer E. Wishart in a Mercer, one of the smaller cars in the race, was second, and Charles Merz, in a Stutz, was third. The full list of prize winners is given in tabular form, which shows that the first four cars to finish a year ago travelled at faster speed than the winner in this year's event.

The result was not altogether surprising, since the Peugeot has long been regarded as the fastest machine produced abroad, but it was thought that the speed would be much greater and that the speedway record would be exceeded. Over 100,000 people witnessed the race, according to the statement of the management.

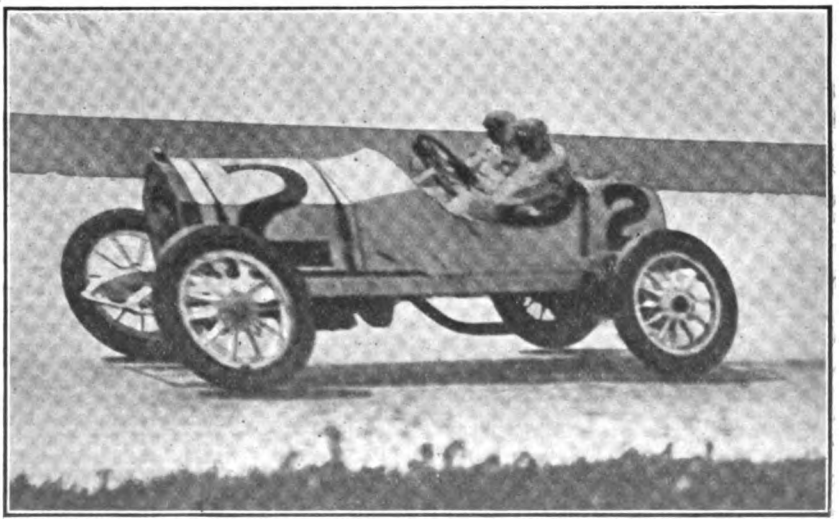
Jules Goux of France and the Peugeot, Winning Combination in the Third Annual International Sweepstakes Event at Indianapolis.



Spencer E. Wishart and the Mercer Car He Drove to Second Place in the Memorial Day 500-Mile Race.

A disappointment to the American adherents was the failure of the Keeton car, driven by Burman, to attain a place. This car showed some of the best speed of the day and practically led the field up to 137.5 miles, when it caught fire. Burman lost much valuable time quenching the flames and later while driving beside the Sunbeam the latter lost a tire, a piece of the casing striking the Keeton's gasoline tank and causing a leak which greatly interfered with its performance. The car showed every indication of being an excellent machine.

Goux won the Remy grand brassard and Remy trophy at 200 miles and the Prest-O-Lite trophy at 300 miles. Firestone tires, made by the Firestone Tire & Rubber Company, Akron, O., were fitted to the machines finishing first and second. The two front shoes on the winning Peugeot went through the race without change. Several sets of tires gave fine service. Among these were the Braender shoes, made by the Braender Rubber & Tire Company, Rutherford, N. J., fitted to Mulford's Mercedes, finishing in seventh place. His first stop was at the end of 285 miles and the Braender shoes went through the 500 miles without changing. Miller tires, made by the Miller Rubber Company, Akron, O., used on Louis Disbrow's Case, in eighth place, also went through the race without trouble. Similar shoes were fitted to Tetzlaff's Isotta, which went out at 290 miles, and they gave no trouble. Bosch magnetos were fitted to the first seven cars



Charles Merz Won Third Prize with a Stutz in One of the Most Spectacular Finishes Ever Witnessed.

500	Peugeot, Goux.....	6:31:43.45			National, Dawson.....	6:21:06.03

to finish and seven of the prize winners also used Bosch plugs. The Bosch Magneto Company, New York City, awarded prizes of $500, $300 and $200 to the first three place drivers. The Rayfield carburetor, made by the Findeisen & Kropf Manufacturing Company, Chicago, was fitted to the Mercer, finishing in second place, and therefore is entitled to claim American honors for the event. Truffault-Hartford shock absorbers were used by the cars finishing in first, second and third places, and were fitted to 25 of the 27 machines which started.

The accessory equipment of the various cars, as supplied either by the entrant of the machine or the maker of the equipment, is to be found in an accompanying table. No less than 15 of the 27 cars were fitted with wire wheels, this being a much larger percentage than has been true in former contests in America. Rudge-Whitworth wheels, made by the Standard Roller Bearing Company, Philadelphia, were utilized on the cars to finish in first and second place, as well as on a number of other machines.

It is also of interest to note that this was the first American long distance event in which the Knight motor has been entered. Two cars utilizing this type of engine were entered, although the Pennebaker, with a reconstructed Stearns-Knight engine, was withdrawn shortly before the start. The Mercedes-Knight, driven by Pilette, finished in fifth place. This would appear to establish the Knight motor as being capable of competing successfully against engines of the so-called poppet valve type. It may be stated in addition that the Mercedes-Knight machine was the smallest car in the race.

TRADE INFORMATION EXCHANGE BUSINESS PROPOSITIONS.

Opportunities Are Offered Below for Agents to Secure New Lines, for Manufacturers to Extend Their Representation, and for Producers to Get in Touch with Those Who Are in the Market for Equipment and Supplies. All Are Opportunities for Live Men and Firms Seeking Profitable Relations.

The Following Details of Trade Opportunities Presented by Members of the Trade Information Exchange Are Published Without Names, Those Interested Desiring the Negotiations to Be Strictly Confidential. Replies Should Be Addressed by the Number Given and Sent to the Exchange with Postage for Forwarding.

CAR AGENCIES DESIRED.

4083—Michigan Concern, composed of two consolidated firms, is in the market to take agencies for pleasure cars listing between $800 and $2500, and commercial vehicles selling from $800 to $1800.

5098—Illinois Company, in live city, seeks the agency for automobiles to sell from $1000 to $2200, and motor trucks listing between $1000 and $2500.

7854—Missouri House, with complete equipment, would like the agency for electric pleasure and commercial vehicles.

4194—Texas Firm, already handling a high class pleasure car, would like the agency for a good motor truck selling from $700 to $1500.

7868—Massachusetts Company, in new location, is in the market for a high class pleasure automobile to sell from $3750 to $6200, in addition to two lines already being handled.

8947—Missouri Concern, recently changed hands, and now selling two standard makes of pleasure cars, is seeking agency for pleasure car line listing from $500 to $5000, and power wagons at the same figures.

5106—Oregon House, in enlarged, new quarters, would like the agency for a pleasure vehicle to sell at $1100 to $1800.

5641—Iowa Firm is interested in pleasure cars selling between $850 and $1000.

4390—Illinois Company, occupying a modern garage, is in a position to handle advantageously a line of pleasure vehicles listing from $900 to $1500.

8504—Massachusetts Garage, recently established, is in the market to represent a make of automobile to sell from $800 to $2000, and motor trucks from $750 to $2000.

12,133—Connecticut Concern, doing big business in large city, is seeking to represent in its territory both pleasure and commercial vehicles listing from $900 to $1200.

ACCESSORY AGENCIES WANTED.

7246—Connecticut Company is in the market for automobile accessories, and garage and repair shop supplies.

6712—Illinois Concern is interested in garage and repair shop supplies.

9142—Illinois Firm, doing good business, would like good line of automobile accessories, etc.; also garage and repair shop supplies.

4561—Iowa House, handling good line of cars, is seeking to represent first class line of automobile accessories and supplies.

6512—Oregon Concern, recently established in new garage, is in the market for automobile supplies and accessories and supplies of all kinds for garage and repair shop.

4997—Missouri Company, under progressive management, is interested in automobile accessories, etc., and garage and repair shop supplies.

4621—Minnesota Firm is anxious to obtain information relative to automobile, garage and repair shop supplies.

5748—Missouri Concern is interested in all kinds of accessories and supplies for pleasure and commercial vehicles and also for garage and repair shop.

8153—Illinois House, having excellent trade, is in the field for automobile and motor truck accessories, etc., also supplies of all kinds for garage and repair shop.

3814—Michigan Company, in exceptionally prosperous condition, would like to hear from concerns making accessories and supplies for power wagons and pleasure cars, as well as for garage and repair shop.

8657—Connecticut Garage is anxious to secure good automobile accessories and supplies, also the latter for repair shop and garage.

8574—Company in Washington, D. C., would like repair shop supplies and accessories for automobiles.

6798—Pennsylvania Firm, which has moved into new quarters, would like to hear from concerns desirous of placing with a live house automobile and motor truck accessories, etc., and garage supplies.

7543—Iowa Company is in the market for automobile accessories and garage supplies.

2735—Illinois House, with modern establishment, will investigate garage and repair shop supplies, also supplies and accessories of all kinds for automobiles and motor trucks.

6939—Michigan Firm, recently formed, is interested in supplies and accessories of select types for pleasure and commercial vehicles. Garage and repair shop supplies of exceptional quality also will be welcome.

6774—California Concern is anxious to secure agency for automobile accessories and garage and repair shop supplies.

4339—Canadian Company, recently formed to do business on a large scale, is interested in automobile accessories and supplies.

9762—Kansas House, occupying new and larger quarters, would take agency for supplies and accessories and garage and repair shop supplies.

6761—Kentucky Firm, carrying a full stock of accessories, is interested in additional lines of supplies and accessories of good quality.

EQUIPMENT NEEDED.

9134—Illinois House, doing good business, is in the market for garage and repair shop equipment.

5174—Iowa Motor Car Company, in new establishment, is desirous of securing garage equipment and supplies and automobile equipment.

7887—Pennsylvania Concern, doing a supply business, is in the field for a complete line of garage equipment and supplies, machine tools and supplies for pleasure and commercial vehicles.

7858—District of Columbia Firm, making a specialty of supplies, is anxious to hear from concerns having good lines of repair shop and automobile equipment.

8134—Michigan Company is in the market for a good line of garage and repair shop equipment, including machine tools, and fittings for automobiles and power wagons.

9815—Illinois Firm, conducting general automobile and repair shop business, is interested in machine tools, garage and repair shop equipment and motor truck fittings.

8547—Missouri Concern, doing electrical business, is in the market for all kinds of electrical equipment for garage and repair shop and pleasure and commercial vehicles.

2146—Minnesota Company, building modern new service station, would like machine tools and repair shop equipment.

5203—California House, recently changed hands, is seeking repair shop equipment for repairing and retreading automobile tires.

9478—Missouri Firm, under new management, is interested in garage and repair shop equipment.

6152—Oregon Concern, in new building just erected, is in the market for machine tools and repair shop equipment of all kinds; also garage equipment, including lathe, drill press, air pump, vulcanizer, etc.

6415—Iowa Firm is seeking all kinds of automobile equipment. Company does general automobile business.

3914—Illinois Company, extending its business, needs equipment for garage and repair shop and machine tools.

2671—Illinois Garage Company, erecting a new, modern building, is desirous of securing garage and repair shop equipment and supplies, also machine tools.

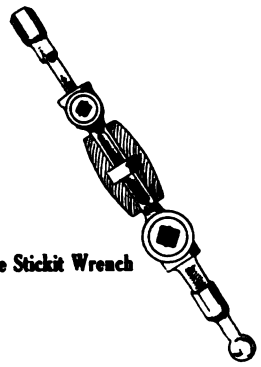
7865—Connecticut Garage, recently established, is in the market for machine tools, garage and repair shop equipment.

2133—Connecticut Firm, changed hands, wants first class line of equipment for garage.

Digitized by Google

DESIRABLE ACCESSORIES FOR THE DEALER.

The Bay State Sticket wrench set is marketed by G. A. Cutter, sales agent, Taun-

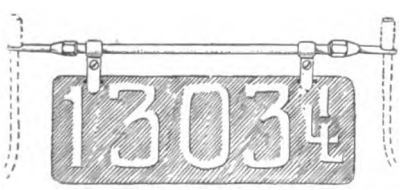


Bay State Stickit Wrench

ton, Mass., and comprises a double ended ratchet wrench, strapped to seven strong stamped steel sockets strung on a square steel shank. One end of the wrench fits the shank and the other the sockets. The wrench also fits four sizes of nuts, and with the sockets 11 different sizes of nuts and cap screws. The reversible ratchet wrench is secured to the shank by a substantial leather strap and with the use of a washer prevents rattling. An 1.25-inch ball is fitted to one end of the shank, but may be removed if desired, allowing the sockets to be displaced. The other end of the shank has a ball stop and spring ball for holding the socket in position. It is a compact, practical set and in addition to being adapted for a large variety of work, may be carried easily in the tool roll. Extra sockets are supplied.

—— ★ ——

The Halladay Lamp Brace and number holder is manufactured by the L. P. Halladay Company, Streator, Ill., and



Halladay Lamp Brace

not only eliminates vibration of the lamps, but serves to carry the license number. It is adjusted easily to any car having lamp irons, a form of turnbuckle being employed. The license tag is secured to it by a special clamp and a quality claimed for the device is freedom from motion. It is finished in black japan, brass or nickel and is moderately priced.

—— ★ ——

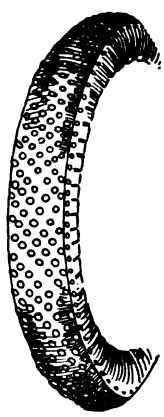
The Right O' Way Horn is produced by the Davies-Bach Manufacturing Company, Cleveland, O., and is actuated

Right O' Way Horn

by the exhaust of the motor. It is operated in the conventional manner, by a pedal or lever, and a clear, penetrating, as well as pleasing, tone is claimed for the signal. It is made in two styles, A being a combined horn and cut-out, while B is for service in states where the cut-out is prohibited. It is held that the horn will not clog, is constructed of high grade material and is attached easily. It is moderately priced.

—— ★ ——

Durable Treads are marketed by the Durable Tread Sales Company, 524 West 34th



Durable Tread

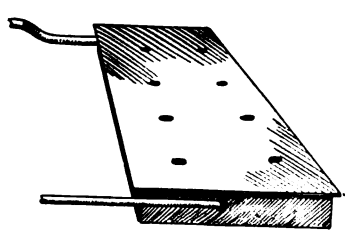
street, New York City. They are constructed of two layers of tanned leather between which are placed five thicknesses of fibre fabric. The tread is thickly studded with steel rivets having large solid heads. The treads are secured to the rim by means of patented nickel steel rim hooks which are formed to the exact shape of the bead of the shoe.

Noera Oiler

It is held by the maker that skidding is prevented and that the use of chains is not necessary. It is also claimed that blow-outs are eliminated as the rim anchorage reinforces any weak spot in the casing.

—— ★ ——

The Noera Oiler is the product of the Noera Manufacturing Company, Waterbury, Conn., and a feature is the diameter of the mouth, it being 1.25 inches, as against the usual .875 inch or less. This makes it a simple matter to replenish the supply of lubricant. The oiler is practically a one-piece construction, the bottom being of clock spring steel pressed against the shoulder of the dome, the seam being double turned. The spout and breech lock are similarly constructed, no solder or brazing being employed. It is made in 10 sizes, from three ounces to one pint in capacity, and is finished either in cop-

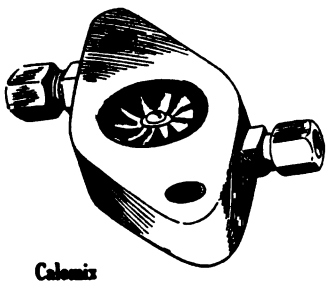


Peerless Radiator

per plated steel, polished steel, polished brass, nickel plated brass, or steel.

Digitized by Google

The Peerless Radiator is designed for heating motor cars and is located in the floor of

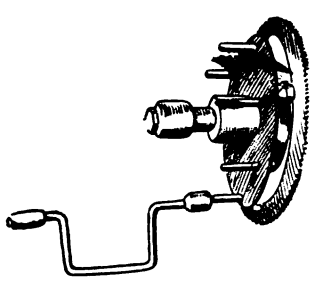


Calomix

the machine. It utilizes the hot water from the circulation system of the power plant and is applicable with both thermo-syphon and pump systems of cooling. When the former is employed a connection is made between the pump and the cooler and a second lead attached to top of the water jacket. With the thermo-syphon system one pipe is led to the lower water manifold. It is held that it increases circulation capacity, keeping the motor cooler, especially when an alcohol anti-freezing solution is employed. The home office of the maker is at Gibbs, Idaho, while the New York office is at 275 West 23rd street.

—— * ——

The Calomix, produced by the Calomix Manufacturing Company, Troy, N. Y., differs from those devices employed for converting a raw mixture into a vapor in that provision is made for heating it. It comprises a brass gasket about .5 inch thick, conforming to the shape of the flanges utilized on the carburetor and intake manifold, and is placed between these members. In addition to a small fan wheel which rotates and breaks up the raw

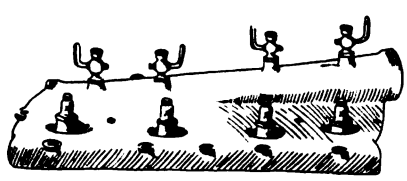


Angier Ford Spare Wheel

fuel, the Calomix is provided with passages through which the exhaust gases pass, warming it. Suitable connections are included for fitting to the manifold and various sizes are manufactured to meet carburetor requirements. It is installed easily and is not expensive.

—— * ——

The Angier Spare Wheel, made by Angier's, Streator, Ill., is designed for Ford cars and is of the demountable type. It comprises an extra wheel for models N R S or T and will fit either front or rear axles. It is removed by displacing the nuts retaining the hub flanges and this is made possible by replacing the old bolts in the hub with studs having finished nuts. When the latter are removed by a special bit stock the wheel can be displaced quickly and without affecting the bearings, speedometer gear, etc. The equipment comprises an extra wheel, studs, nuts and



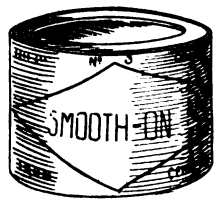
Danver Priming Cocks

the wrench member. It is moderately priced and provides demountable features not fitted to Ford cars.

—— * ——

Danver Priming Cocks are fitted by A. C. Danver, Hospital and Borden streets, Providence, R. I., to model T Ford automobiles. They are screwed into the cylinder head on the left hand side of the motor and their openings communicate directly into the combustion chamber. The cocks are of the conventional type, having liberal sized cups, and are fitted with a spring retained handle. Their function is to provide means for priming the motor without removing the spark plugs and by their use it is possible to locate missing cylinders, introduce kerosene and remove carbon deposits. The priming cocks are moderately priced.

Smooth-On Iron Cement is marketed by the S. B. R. Specialty Company, East Orange,

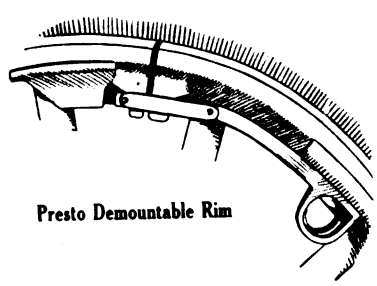


Smooth On Iron Cement

N. J., and is included in a repair outfit which also comprises an elastic cement, a roll tape and an instruction book. The iron cement is held to be very efficient for repairing cracked water jackets and leaky radiators. It is claimed that the work may be completed quickly, involving no other labor than cleaning the parts, applying and heating the material. A quality emphasized with the cement is that it is easily worked and completely fills the opening, which may be smoothed over to make a neat appearing job. The two cements are utilized separately or together, depending upon the nature of the repair to be made.

—— * ——

The Presto Demountable Rim, manufactured by the Presto Inter-Rim Company, Boston, is constructed in standard sizes and will fit all straight side, clincher or solid tires. A feature of the rim is the contracting locking ring utilized in conjunction with a safety locking device or toggle, and it is held by the maker that one motion securely locks and holds in position both the rim and shoe. To remove the rim a lever is moved downward, expanding and forcing it off.

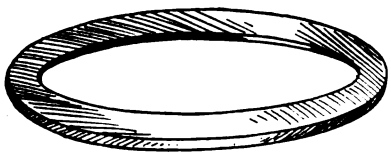


Presto Demountable Rim

To replace the new rim and shoe, the tire is mounted on the wheel in the usual man-

Digitized by Google

ner and with the valve stem placed in its proper position. The wheel is rotated until the



Victor Gasket

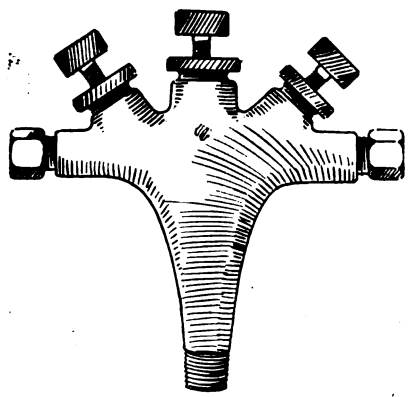
stem is at the bottom and the lever at the top. The lever is then moved upward to its normal position where it locks automatically.

—— ★ ——

Victor Gaskets are produced by the Victor Manufacturing & Gasket Company, Chicago, in standard forms for a variety of purposes in connection with the motor car. That shown is for fitting between the spark plug and cylinder to prevent leakage and is made in two types, open and closed. Copper and asbestos are employed and when these materials are compressed they make for a perfectly tight joint between the parts. They are made in various sizes and are inexpensive. The company also manufactures special gaskets and issues an illustrated catalogue which will be mailed free of charge upon request.

—— ★ ——

The Bingham Compensator is made by the Bingham Manufacturing Company, Cleveland, O., and as the name implies, is designed to regulate or compensate the pressure in the float chamber to which it is at-

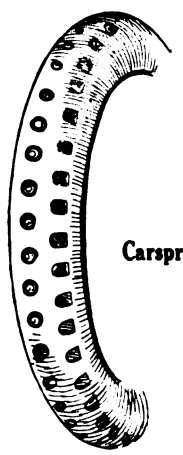


Bingham Compensator

tached. It is held by the maker that at high and low speeds there is a differing pressure at the spraying nozzle, but not in proportion to the amount of fuel, making for waste. The Bingham device compensates by reducing the pressure in the float chamber proportionately to the reduction of that at the spraying nozzle. It is provided with two speed adjustments, also a fuel control, and is inexpensive.

—— ★ ——

The Carspring Anti-Skid Tire is manufactured by the New Jersey Car Spring & Rubber Company, Jersey City, N. J., and is a one-cure wrapped tread shoe having depressions instead of projections. Cups having a convex base at the apex of the tread are employed with semi-circular cups on

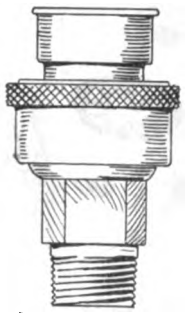


Carspring Anti-Skid Tire

either side which grade off as the tire rounds out. It is held that this construction prevents side slip and increases traction through the cup forming a vacuum which is broken as the tire revolves.

—— ★ ——

The Tucker Grease Cup, manufactured by W. W. & C. F. Tucker, Hartford, Conn., is a positive lock compression type and is made for service on motor cars and machinery where vibration tends to loosen the head. The locking device is free from ratchets and all parts are enclosed, preventing the entrance of dust or dirt. The maker points out that it may be refilled easily and that the parts requiring lubrication are cared for properly in that the grease flows freely when required by the bearing, etc. The cup is no higher or larger than the ordinary member and is constructed in various sizes, taps for each being carried in stock.

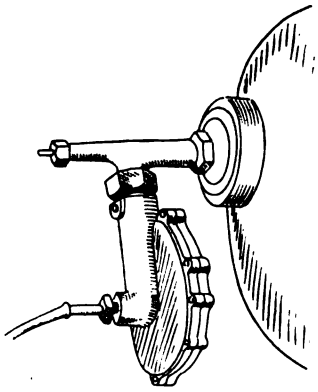


Tucker's Grease Cup

The Prest-O-Lite automatic reducing valve is manufactured by Prest-O-Lite Company, Indianapolis, Ind., and is attached easily and quickly to the gas tank made by this company. Its function is to maintain the correct pressure at all times and this is secured regardless of whether the tank is full, half empty or nearly so. It makes for convenience in that the head or other lamps may be lighted without the usual adjustment of the pressure and that the blaze is such that maximum efficiency is secured. Economy is effected through preventing a waste of gas. The automatic reducing valve is moderately priced.

—— ★ ——

The Tinol Solder Stick is a new form of solder of that name brought out by Hess & Son, 1031 Chestnut street, Philadelphia. This stick is about five inches long, sells for a few cents and does not require flux



Prest-O-Lite Reducing Valve

or acid. To use it the part to be mended is heated and the solder applied.

Digitized by Google

GARAGE AND REPAIR SHOP EQUIPMENT.

THE proper balancing of motor flywheels and other similar rotating parts, and the elimination of undue vibration are important factors in motor construction. An engine will not run in an entirely satisfactory manner unless its flywheel is given both a running and standing balance. The old methods of balancing weights give only a static balance; that is, the rotating parts would be balanced perfectly standing still, but they would not always be in balance when running. High speed parts are so designed and balanced that they will not distort from centrifugal action if rotated free at any speed at which they may run in use, and thus destroy a state of running balance.

The Defiance Machine Works, Defiance, O., has made a study of this particular branch of the automobile industry, and in an accompanying illustration is presented the Defiance No. 66 patent motor flywheel balancing machine, which is designed to give a flywheel or similar rotating part not to exceed 1000 pounds in weight, a perfect running and standing balance. Special effort has been made to eliminate complicated parts without dispensing with such essential features as are necessary to accomplish the desired results. The best grade of material and the highest skilled labor are utilized in the construction, and it has been adopted by some of the largest automobile manufacturers of the country.

The machine comprises a frame of conical form, in the centre of which is placed a vertical ground steel spindle in a step bearing in the base of the frame, and passing up through a long bearing at the top of the frame. This spindle at its upper end carries a face plate provided with two driving pins, which project upward parallel to the axis of the spindle. A steel centre with a taper shank is fitted into the vertical spindle. Its upper end is reduced to a conical point, and upon this rests the object to be balanced.

The vertical spindle is rotated by friction gearing driven by a horizontal shaft in suitable bearings at the base of the machine. The shaft is in two sections and they are connected by a friction clutch and moved longitudinally by a counter-weighted lever so arranged that the weight may be used to press the clutches together when it is desired to rotate the object to be balanced, and to disconnect the clutches when it is desired to examine, test and mark the object while running alone, as the driving pins are liable, when pressing against the part to be balanced, to produce uneven rotation. The true unbalanced condition is best shown when the disturbing influences are withdrawn after the clutch is released.

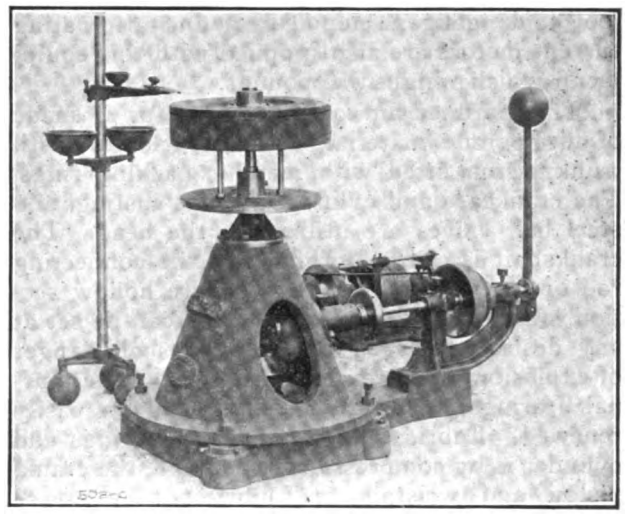
WALWORTH WASHER.

The Walworth Manufacturing Company, Boston, is manufacturing the Walworth auto and carriage washer which is of the swivelling type and moderately priced. It is secured to the ceiling by lag screws, and the arm swivels horizontally in a complete circle, eight feet, eight inches in diameter. The working parts are of brass, with other components of cast and wrought iron, heavily galvanized.

The washer not only enables the operator to reach easily any part of the machine being washed, but the hose is kept off the floor, adding to its life. The complete equipment comprises in addition to the washer and lag screws, 15 feet of .75-inch three-ply hose with couplings, and a Boston spray nozzle.

GARDNER AIR COMPRESSOR.

Compressed air in the garage is a necessity as it is expected by the motorist. Varying conditions require different installations and to comply with these requirements the Gardner Gov-



Defiance Patent Motor Flywheel Balancing Machine.

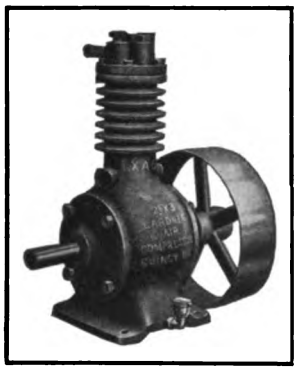
ernor Company, 30 Williamson street, Quincy, Ill., is manufacturing air compressor systems both for the small garage and the service station. These include stationary and portable outfits, either operated by the power of the garage or by electricity.

The garage set shown in an accompanying illustration is an electrical unit and the design is provided with rollers so that it may be moved when desired, a construction making for convenience. It consists of a Gardner compressor connected by gearing to an electric motor, both units being mounted on a cast iron table underneath which are the air tank, gauge, automatic control, etc. The pipe connections are very complete and the outfit is supplied with either an air or water-cooled compressor as desired.

The automatic starting and stopping device is listed as extra and can be attached to the apparatus. They are made to suit any type of current and insure a constant pressure in the tank, it being maintained automatically. The garage sets are made in three styles, No. 1 G S comprising a

Digitized by Google

two by 2.5 air-cooled compressor, .5 horsepower direct or alternating current, two or three-phase, 110 or 220-volt motor, cast iron table, 14 by 26-inch tank and gauge. The same is constructed with a single-phase alternating current motor. The weight is 400 pounds.

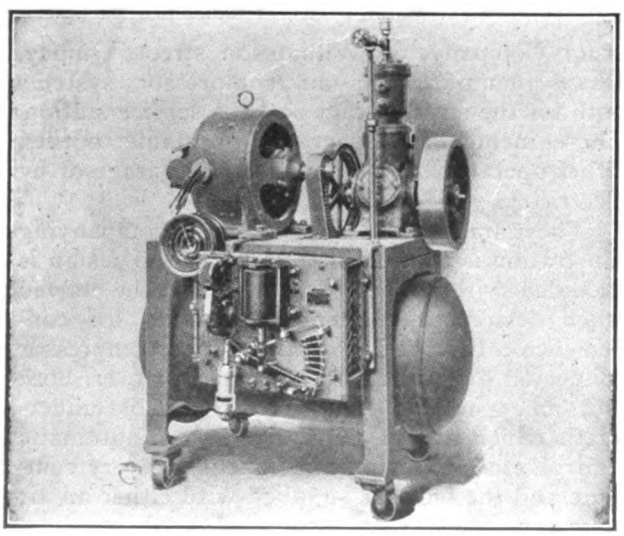


Gardner Air-Cooled Compressor.

The No. 2 outfit includes a two by three air-cooled compressor, one horsepower direct or alternating current, two three-phase, 110 or 220-volt motor, table, 14 by 26-inch tank, etc. A one horsepower, single-phase, alternating current motor is listed as extra. The weight is 500 pounds.

The third style, No. 3, comprises a three by 3.5 water-cooled compressor, three horsepower alternating current, two or three-phase, 110 or 220-volt motor, cast iron table, 18-inch by 3.5-foot tank, gauges, etc. Direct and alternating current motors are also supplied with this equipment, which weighs 750 pounds.

The Gardner air-cooled compressor is made of high grade material, is semi-enclosed, with trunk piston fitted with metallic packing rings. The crankcase and cylinder are one casting, and steel ball valves are utilized in the head. The crankshaft is a drop forging and the connecting rod of special bronze and of square hollow section. The safety valve in the head can be set at any desired pressure and eliminates all danger of explosion due to excessive friction. The journal bearings are bronze bushings and are easily renewed. Lubrication of the main bearings and cylinder is by compression cups, while the crank, piston and wristpin are lubricated by grease



Gardner Garage Air Compressor Outfit, Including Electric Motor and Automatic Control.

which is stored in the hollow connecting rod.

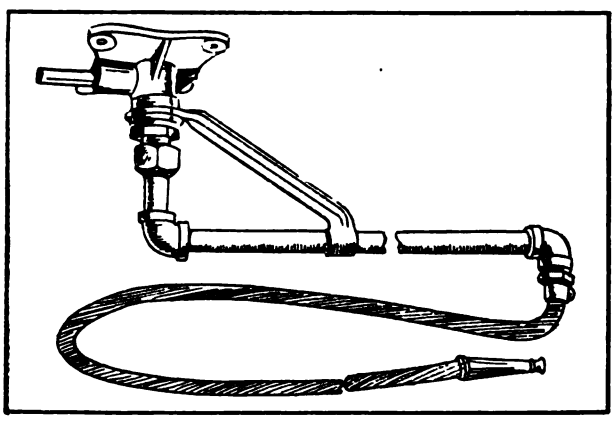
The water-cooled type is designed for service in large garages, and the three by 3.5 size has a capacity of seven cubic feet a minute at 500 revolutions, and it is stated that it will fill an 80-gallon tank to 200 pounds in 15 minutes. The Gardner Governor Company issues an illustrated booklet on air compressor systems which will be forwarded free on request.

SEAMLESS STEEL TANKS.

With the very general adoption of compressed air in the garage and repair shop the use of a tank for storing the air is essential, especially when the compressor outfit does not include one of these members. Janney, Steinmetz & Co., Philadelphia, manufactures a wide variety of seamless tanks for various air installations, as well as for other uses. Catalogue and descriptive matter will be mailed free of charge upon request.

LUBRICATING OIL CABINETS.

In handling lubricating oil it is important that the fluid be kept free from dirt or dust as the



Walworth Swivelling Type Auto Washer, Designed for Attachment to the Ceiling.

foreign elements act as an abrasive, cutting bearings. The Milwaukee Tank Works, Milwaukee, Wis., is manufacturing a lubricating oil cabinet which is constructed of heavy steel and to withstand severe service. It is provided with a pump of the self-measuring type and pints are handled as accurately as larger quantities. A quality claimed for it is that it will not drip. A lock and keys are fitted if desired. A measuring gauge indicates the quantity of oil on hand. The cabinets are made in barrel sizes, varying from one to five. The smallest member is 17 inches thick, 29 wide and 30 high, and weighs 185 pounds. All cabinets are guaranteed. Catalogue and price list will be forwarded upon application.

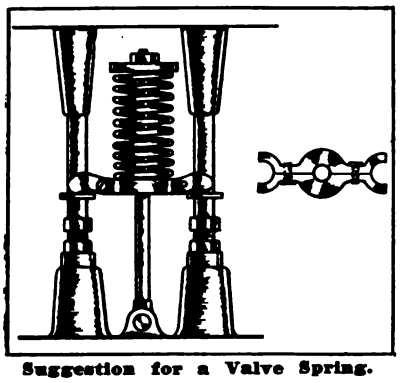
NEW BEARING METAL.

A new bearing metal is being marketed abroad, called phosforum, and it is particularly adapted for plain bearings. One of the difficulties encountered in the selection of a suitable metal for this purpose has always been in regard to the homogeneity of the cast material, in which segregation occurs. The new metal is cast in stick and bushing form and it is said to eliminate troubles because of variations in temperatures.

Digitized by Google

MECHANICAL NOTES FOR GARAGEMEN.

REPLACING clutch springs sometimes means damaged hands unless the workman is careful and has the proper tools for the work. A simple and easily constructed jig for replacing multiple disc types is shown at A in an accompanying illustration. It comprises a tube of sufficient inside diameter to slip over the shaft and a plate equal in diameter to that of the tube. The plate is drilled to take a .625-inch bolt which is fitted with a nut. The head of the bolt is cut as shown so that it will not slip when the nut is being screwed up. The jig shown at B differs from the one described in that it is applicable for cone type of clutches, and as will be noted, the plate member is made in two pieces or halved, so that it may be removed easily.



Suggestion for a Valve Spring.

EQUALIZING VALVE SPRINGS.

A suggestion for equalizing or balancing the tension of valve springs and one which is of interest in that one member may be utilized in place of two, is given in a recent number of the Commercial Motor, an English publication. It is designed to be employed with four-cylinder motors, but could be utilized on other types by making the actuating parts conform to the engine.

As will be noted by the accompanying illustration a vertical rod is fitted centrally between the valve guides, two lugs being secured to the upper surface of the crankcase for the purpose of hinging or pivoting the rod member and to permit canting of the crossbar.

The valve spring is carried by a crossbar which is construced as shown in the sketch, and is provided with slotted ends which fit over and control both tappet spindles. As constructed the tension of the spring could be increased if desired and the device presents an additional advantage in that it would simplify the work of grinding valves as it would be an easy matter to remove the spring. Presumably the valve stem is relieved from undue side thrust by suitably proportioning the crossbar.

PROPER WIRE FOR LIGHTING.

Proper consideration should be given to the size of wires utilized in the installation of electric lighting outfits, or in replacing damaged leads. Too small a gauge results in deficiency, according to Emil Grossman, electrical expert. In experiments conducted with 12-foot duplex lengths of No. 16, 12 and 10 B & S gauge sizes of wires and used to supply 10 candlepower, six-volt, 12.5-watt tungsten lamps with current, the percentages of loss were as follows: On a basis of a No. 10 wire line the loss in the No. 12 size is 1.58 times; in a No. 14 size, 2.25 times; in a No. 16 size, four times—the least that would occur in a No. 10 wire size.

Size wire	Resistance in ohms a 12-foot length of line	Loss in watts	Ratio
No. 10	0.024	0.102	1.00
No. 12	0.036	0.165	1.58
No. 14	0.060	0.230	2.25
No. 16	0.096	0.360	4.00

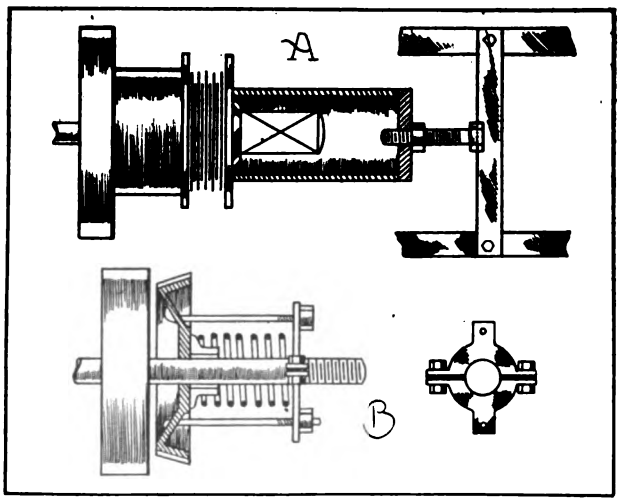
The accompanying table shows the resistance in ohms and loss in watts and ratio. A line is considered as having two wires.

RESTORING DRY CELLS.

Various methods are given for temporarily restoring dead dry cells, among which may be mentioned drilling through the sealing material and moistening the depolarizer with a little water and vinegar. The following hint is given by a battery concern: Take a piece of hard wood and with a light hammer drive down the material surrounding the carbon post. It is said that amperage is increased considerably by this action.

SIMPLE PISTON CLAMP.

There are a number of tools, easily made and inexpensive, that can be constructed by the owner-repairman. Among them may be mentioned a piston ring clamp for holding the rings in place while the cylinder is being slipped over the piston. Assuming that the piston is 4.25 inches in diameter: Take a strip of band iron .125 inch thick, .5 inch wide and 16 long. Bend the metal into a circle, measure off 1.5 inches on each end, marking the distances. Place the ends

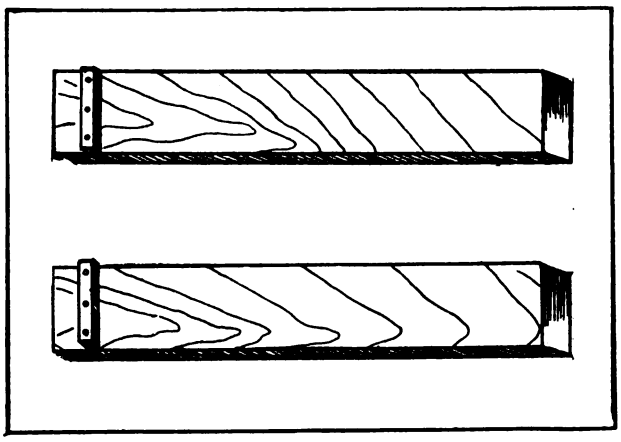


Jig for Replacing Clutch Springs: A, Type Applicable for Multiple Disc; B, Showing Application to Cone Clutch.

in the vise and bend them over. This will provide extensions which may be gripped by the pliers when the clamp encircles the ring. The

Digitized by Google

band should be slightly less than 4.25 inches in diameter to compress the ring fully. To use the clamp, place it over the top ring and draw the



Suggestion from a Reader for Preserving Tires from Dampness in Garage Not Equipped with Floor.

ends of the band together with a pair of pliers while an assistant slips the cylinder over the head of the piston and ring. Upon the latter being caught the pliers may be released and the clamp used on the next ring and so on.

WATER PROOFING THE WINDSHIELD.

While preparations may be purchased for rain proofing the glass windshield, a solution made from soap will serve and it is said that the raindrops will slide off and moisture will be prevented from gathering. Take a small quantity of semiliquid or soft soap, or make a paste of ordinary soap and water, and smear a little over each side of the glass. Then with a handful of waste or with a soft cloth rub the solution evenly over the entire surface so that a fine film remains. If it is well distributed and rubbed, so that the surplus soap is removed, it cannot be detected when the screen is dry.

TIRE REST AND CAR STOP.

Tires should not be allowed to stand on moist ground as not only is the rubber affected, but the rims are likely to become rusted, creating trouble when changes must be made. A motorist having a place in the country and who keeps his machine in a building not equipped with a cement or wooden floor, contributes the following suggestion:

The building was originally constructed for other purposes, was set on posts and was not fitted with a floor. After considerable use the tires wore deep ruts, which held moisture, and after a storm the tires were kept constantly wet. I solved the problem by taking two pieces of joist about 10 by two inches and imbedding them in the ground as shown by the accompanying sketch. The joists were laid so that they were slightly higher at the front end where the front wheels rest so that the machine could be rolled out of the building with very little effort. This was done as there was not room in front to crank the motor.

With the car in the building and the doors closed there was no spare room in front or the rear, and as it was too much work to push the machine into its position, a chock was fitted to each board so that the car could be run in under its power and without danger of going through the side of the building if the brakes refused to hold. The blocks also served to denote the proper stopping place. The suggestion may be of value to your readers who have similar places in the country.

REPAIRING CRACKED CYLINDERS.

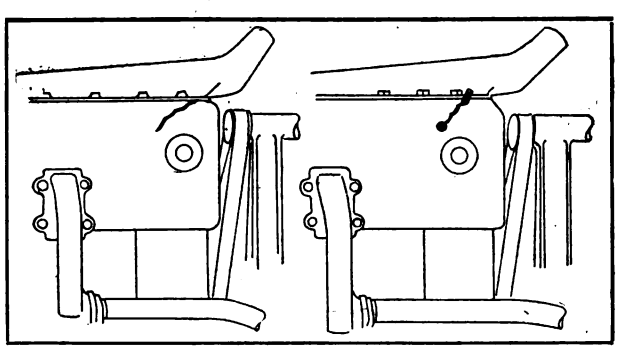
The usual practise in repairing cracked cylinders is to employ the autogeneous or welding process, although iron cements, etc., have been used with success, depending on the nature of the fracture. The Commercial Motor, an English publication, prints the following suggestion, which may be of service where a small crack is to be mended and when there is not time to send the part to be welded:

Drill and tap a small hole at each end of the crack to prevent further extension of the weakness, and fit an iron stud. Next clean the outside and inside of the fracture very thoroughly, using a scraper and gasoline. File up some soft copper and fill the crack, heaping the filings over it. Then take a powerful blow lamp or a torch and direct the flame on the copper. By this method a fair amount of metal can be worked into the opening. After cooling, the studs are cut off flush and the copper filed smooth. It is said that the repair will endure indefinitely.

The Downing-Detroit Motor Company of Detroit is bringing out a racy type of cyclecar, the power plant being of a 10-12 horsepower, long stroke design.

Herbert Cole, well known in motoring circles in Boston and vicinity, has taken the New England agency for G. J. G. and Ohio cars, and has established a temporary sales office in the Garden building, Boylston and Church streets, and a temporary service station in the Motor Mart on Pleasant street. This is the first appearance of the G. J. G. in this territory, and while the Ohio is not a new comer, it makes its re-entry after several seasons of absence.

Owing to the recent strict interpretation by the New York State authorities regarding inclusion in corporate names of words not in the English language, the application by organizers for a charter for the Motokart Company has been refused. The incorporation of this company was mentioned in a previous issue, but owing to this requirement the new concern has been incorporated as the Tarrytown Motor Car Company, Inc.



Method of Repairing Crack in Cylinder by Fusing Copper Filings.

The company will retain, however, the word Motokart as its trade mark, this having been registered some time ago.

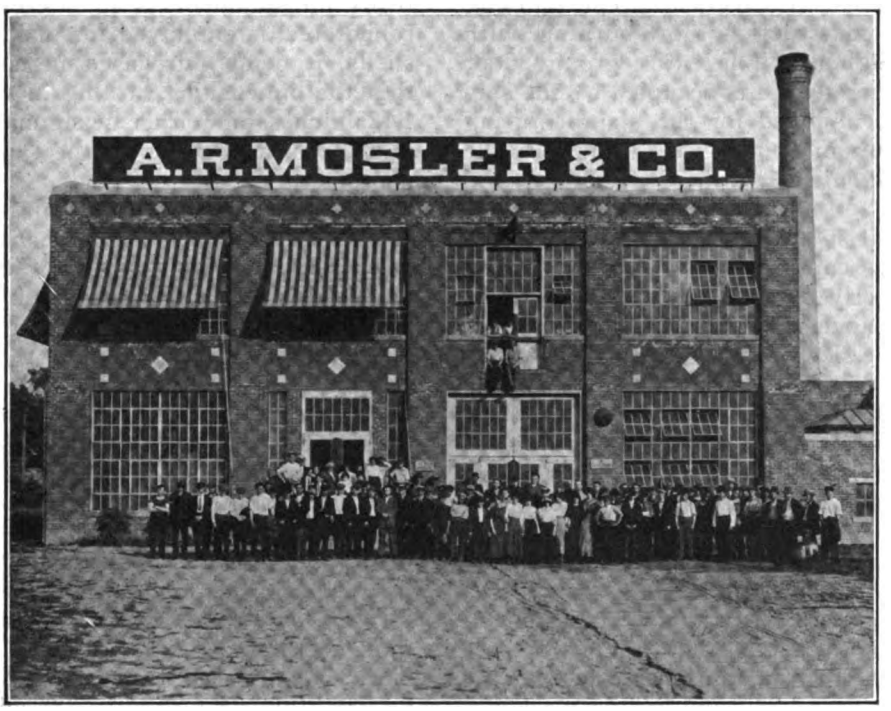
MANUFACTURING SPITFIRE SPARK PLUGS.

How an Output of Millions Annually, Embracing a Type for Each Motor, Is Handled at the Mount Vernon Factory of A. R. Mosler & Co.

(By C. P. Shattuck.)

THE high degree of efficiency obtained in the modern automobile is largely due to the refinement of details in which the ignition specialist has been an important factor. In the perfection of the magneto with its inexhaustible supply of current, it was generally supposed that maximum efficiency, insofar as ignition was concerned, had been attained. Until a few years ago it was considered sufficient if a spark plug ignited the charge and withstood the severe conditions of service to which it was subjected, such as extreme changes in temperatures, expansion and contraction, carbon, oil, etc., and the burning effect of magneto currents.

Careful, scientific study and experimentation developed the fact that the construction and location of a plug in the cylinder are of vital importance; that the maximum motor efficiency is obtained only when the flame is spread instantly throughout the mixture, insuring complete combustion of the charge and eliminating waste of unexploded gas through the exhaust. Although it is a simple matter to design the length of the base so that the spark comes in direct contact with the fresh mixture, the construction and the material of the electrodes involves problems of manufacture in that the widening and shortening of the spark gap by expansion and contraction must be overcome. Other factors to be considered are: The elimination of carbon deposits, undue heat, the protection of the insulator, and the ability of the plug to provide an intense spark at low motor speeds. These problems have been solved by Arthur R. Mosler, the ignition specialist at the head of A. R. Mosler & Co., Mt. Vernon, N. Y., manufacturer of the well known Spitfire, Triumph, Mosler Junior, etc., spark plugs.

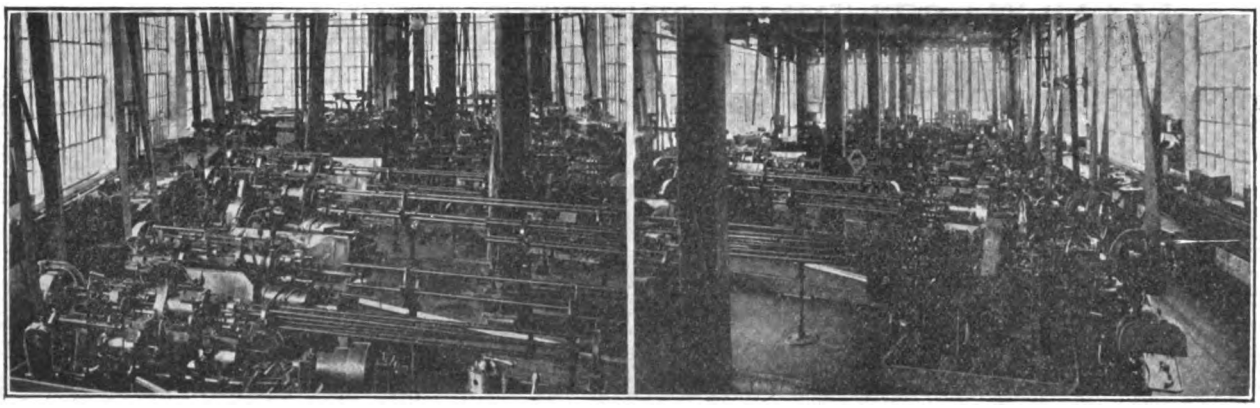


Factory of A. R. Mosler & Co., Mt. Vernon, N. Y., Maker of the Well Known Spitfire Spark Plugs.

Mr. Mosler's rise to a prominent position in the automobile industry is remarkable. In 1900 he experienced, as did other makers of horizontal motors, plug troubles due to the lubricant fouling the gaps. To prevent the oil short circuiting the points he designed and patented the Spitfire closed end porcelain type with slots in the base to obtain a self-scavenging effect. The first 1000 were turned out in a lathe and fitted with imported porcelains. So successful were the plugs in overcoming ignition troubles and in economy of current, that they attracted attention from users of internal combustion motors, who were experiencing difficulty in obtaining efficient ignition. The demand soon exceeded the supply, leading Mr. Mosler to produce an additional 2000, which also found ready customers. Some idea of the expansion of the business may be obtained by Mr. Mosler's statement that in 1904 he marketed 20,000 spark plugs, the following year 100,000 and in 1907 500,000. Today the output of the factory at Mt. Vernon, which was erected two years ago to meet the requirements of an increasing demand, runs into the millions annually.

Mr. Mosler attributes his success to the fact that for years he has made an exhaustive study of the requirements of the different motors manufactured and in the production of a spark plug especially suited to each distinct type. Not only are plugs made for pleasure and commercial cars, but for motorcycles and marine engines; in fact, for every type of explosive motor utilizing the jump spark system of ignition. For the past three years the engineers of the factory have compiled annually a booklet listing all makes of cars and motorcycles, showing the plug best adapted to each motor, and the books have been distrib-

Digitized by Google



Illustrating the Batteries of Multiple-Spindle Automatic Screw Machines Which Produce the Blanks or Shells.

uted without charge to both the trade and owner.

The Mosler factory is designed and equipped to overcome the many problems of quality production. It exemplifies the value of scientific methods of manufacturing and it is a structure in which the efficiency of the manual worker is developed to a high degree, in that plenty of light and fresh air are provided in the rooms. The sanitary conditions are excellent. The building itself is of mill construction, slow burning, with sprinklers throughout. The entire ground floor is of cement concrete and is occupied by the special machinery employed for the manufacturing of the components of Spitfire spark plugs; by the buffing, polishing, nickel plating departments, and the store, stock and steel rooms.

In the second story are the offices and auxiliary store and assembly rooms. The last named are located directly under a large skylight, providing an abundance of light. The side walls are fitted with ample sized windows, as will be noted by an accompanying illustration. Power is supplied by two Nash gas engines and a White & Middleton, the latter being utilized for driving the lighting dynamo and an air compressor, compressed air being used extensively throughout the building.

As is evident the production of a large number of different types of spark plugs involves a vast amount of detail, but the Mosler system of manufacture is so perfected that a defective part or faulty assembly can instantly be traced to the workman. It is practically impossible for either condition to be overlooked, as the inspectors are very thorough. The result makes for absolute satisfaction with the ultimate user, as the quality of material and workmanship are consistently maintained.

The process of manufacturing Spitfire spark plugs from the time the 12-foot lengths of steel are fed to the batteries of multiple-spindle automatic screw machines until the plugs are boxed ready for shipment, is an interesting one. Cold rolled steel is employed for making the bases or shells, it being purchased in enormous quantities, the dimensions varying in size from .875 to 1.125 inches, and either hexagonal or round stock is utilized, depending on the type of plug being manufactured.

The Acme and Gridley multiple-spindle automatic screw machines are capable of performing eight operations at once, although but five are required to finish the blank for the Spitfire plug, the total including milling, turning, counterboring, drilling, reaming, threading, cutting off, etc. In principle the Acme comprises four work spindles, which are held in a cylinder and rotated by gears, the cylinder being indexed to bring these spindles in front of the side working and end working tools. It requires but one-quarter turn of the cylinder to complete one piece, this being accomplished in the same time as required to complete the longest cut, usually a drilling, forming or box tool turning operation. The 12-foot steel bars are placed in the spindle and the work of completing the blanks is performed automatically. The machines are adjustable to any size and shape of blank desired and turn them

Illustrating Sections of an Assembly Room, All of Which Have Plenty of Fresh Air and Light—Throughout the Factory the Sanitary Conditions Are Excellent.

out at the rate of 100 an hour. The blanks and scrap fall into a pan from which the contents are removed and are placed in a separator. By the application of the principle of centrifugal force all lubricant is removed from the metal, and the oil is filtered and used over again in the automatics.

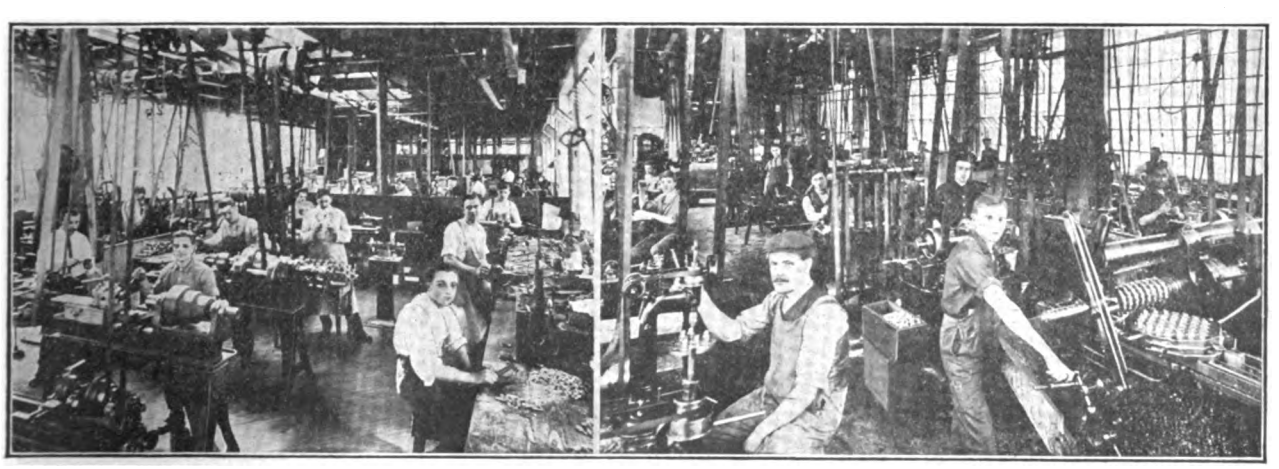
From the separator the blanks go to a threading machine for cutting the threads on the base, after which they are carried to the slotting machine, which cuts two slots in the base of 16 blanks in one operation. Each machine has a capacity of 1000 plugs a day. Although a hex is provided on the blank it is cut to accurate and standard dimensions by the milling machines, which cut 37 in three operations. After being cleaned by compressed air the small hole in the end is bored and countersunk. Following this process the shells are subjected to a rigid inspection both before and after the removal of any burrs that may exist. In the machining and finishing extreme care is taken to remove any sharp points which would become incandescent in service.

Before being nickel plated each shell is highly polished, then cleaned in an electric bath, an invention perfected by Mr. Mosler. The shells are next assembled on special racks, two dozen to a rack, and placed in the plating bath with a capacity of 12 racks every 30 minutes. After plating, the shells are inspected, polished and again examined, before being sent to assembly rooms.

The centre rod or electrode of the Spitfire closed end type is constructed in a machine into which is led a roll of nickel steel wire. The machine straightens the metal, threads, points and cuts it off into the required lengths. The small hexagon brass nut which determines the position of the point with reference to the aperture in the base, or in other words, the gap, is located accurately by a machine after the nut has been started by hand.

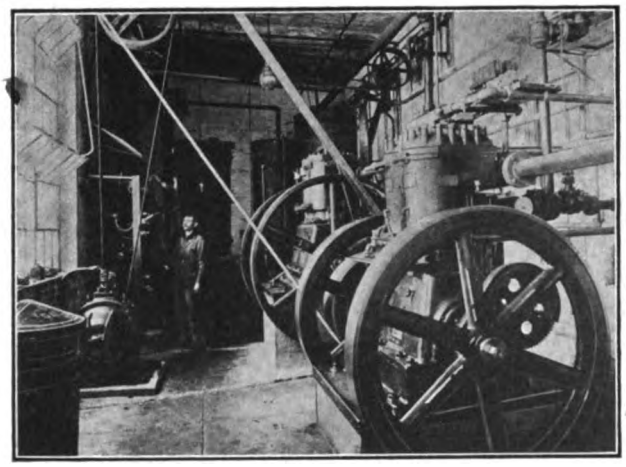
With the Spitfire plug an asbestos cord is utilized as a gasket, being placed on the centre rod before insertion in the porcelain. This is performed by a machine which incures the correct adjustment and gas tight construction. Asbestos is also employed on the centre core, it being wound by hand, and formed and suitably compressed by a machine. The knurled nut, securing the centre rod, is adjusted by hand.

The threaded bushing or cap retaining the porcelain in the shell is fitted by a special machine having a form of friction clutch which interrupts the power when the desired pressure has been attained, the complete operation requiring but a few seconds. The asbestos copper gasket utilized on certain types, which insures a gas tight fitting of the plug in the cylinder, is spun and polished in one operation by another special machine. The plug then passes to a workman, who by one or two deft movements with a tool, accurately sets the gap. Each completed plug is



Section of Mica Plug Department (at Left) and Milling Machines (at Right)—These Machines Cut the Hex Heads.

Digitized by Google



Power Is Supplied by Gas Engines for Operating Machinery, Dynamo and Air Compressor.

tested by an induction coil, subjected to a final inspection, then tested for gas tight construction. The last named operation is performed in a special machine supplied with compressed air at a pressure exceeding by several pounds that to which the plug would be subjected in service. As the plug is immersed in water any leak in the assembly is detected instantly by the bubbles given off.

The above process of manufacture deals with the standard nickel wire electrode Spitfire spark plug, which is but one of many produced. Although the dimensions of the centre rod point are such that it will withstand the burning effect of magneto currents, the platinum iridium pointed plugs are best adapted for both battery and magneto. The centre rod is bored in a high speed drill and the liberal section of platinum inserted and secured by a press machine. The platinum, which is worth about $50 an ounce, is cut into the required lengths by a special cutting machine.

In addition to the closed end types an open end cone end is constructed in several designs and with one or two points. The centre electrodes of the conical type are cemented by a special process and the brass retaining caps are fitted by a machine especialy designed for the work. The process of fitting the wire electrode in the base of the shell is similar to that employed with the platinum iridium plugs.

The porcelains utilized are imported and each member is given a severe test to prevent faulty insulation. Each porcelain is also carefully examined and must conform to the standard set by Mr. Mosler. This assures rapid assembly of the parts and a perfect finished product.

As several patents have been granted to Mr. Mosler, the dates are stamped on the hex of each shell. This operation is performed by a special machine, taking place before the blanks are sent to the polishing room. After passing the final examination the plugs are boxed and packed in cartons, the work being performed by girls. Those shipped to the car manufacturers are placed in nests in boxes of 100, and these packed in cases.

A section of the lower floor is set apart for the making of motorcycle plugs which embrace both mica and porcelain types, also combined mica and porcelain, and many of these are produced for motorcycle manufacturers. The mica plug is constructed of the best selected India mica, wound both ways, and is thus considered to be impervious to the action of oil or heat.

As previously stated a number of different types of plugs are produced, including in addition to the Spitfire, the Mosler Vesuvius, Triumph and Mosler Junior, etc. Each type is constructed in varying lengths of bases to so project the spark into the combustion chamber that maximum motor efficiency will be obtained by reason of instantaneous ignition of the charge. The thickness of the cylinder walls, type of valve cap, etc., important factors in spark plug construction, are also taken into consideration as the requirements of different motors vary. All types are based on long study and careful experimentation of the cylinders for which they are designed.

The Mosler spark plug has been adopted by a large number of leading car manufacturers after severe break down tests. Until recently the factory was operated night and day to fulfill 1913 contracts. Although produced in enormous quantities, quality is never sacrificed.

FORM GRANT MOTOR COMPANY.

Men Well Known in Detroit Retail Circles to Manufacture New Line.

George D. Grant and Charles A. Grant, who as the Grant Bros. have long been identified with the retail sales branch of the industry in Detroit, have turned their attention to manufacturing, having been instrumental in the organization of the Grant Motor Company, which will produce a

Arthur R. Mosler, Head of A. R. Mosler & Co., Inventor of the Spitfire Spark Plug.

new line of small cars under that name. The officers of the concern are: President, George D. Grant; vice president and sales manager, Charles A. Grant; secretary and treasurer, David Shaw; factory manager, George F. Salzman; chief engineer, J. M. Howe. The car is not new in the strict sense of the word, since the first vehicle of this design was produced about a year ago at Mishawaka, Ind.

UNDERHILL IN CALIFORNIA.

Boston's Pioneer Dealer Handled Knox Cars for Over 12 Years.

When it was announced that the Knox Automobile Company, Springfield, Mass., had established a factory branch in Boston, it was but natural that the automobile industry should be more than usually interested in the reason for the move, inasmuch as A. P. Underhill of the Underhill Company has been handling the Knox agency in that city since 1900. In this respect Mr. Underhill holds a unique record in the industry. Besides being practically the first automobile dealer in Boston, and therefore in America, he has the distinction of representing one line of cars continuously from the beginning.

A. P. Underhill became interested in automobiles about the time that Kenneth Skinner imported his first De Dion tricycle, and it was shortly thereafter that he began business as a dealer in the old Automobile Headquarters on Stanhope street. It was at this establishment that Harry Fosdick and some others assisted him in interesting the people of Boston in the new method of transportation. Mr. Underhill was the first agent the Knox Automobile Company had, and perhaps it is not too much to say that it was largely through his efforts that the Knox concern was enabled to get its first machines upon the market.

Some time later the Underhill Company was organized and located at 222 Columbus avenue, where Frank B. Crockett, the manager of the new Knox Boston branch, became identified with the institution. Two years ago, the present quarters at 885 Boylston street were acquired, and this is the establishment which has been taken over by the new branch.

Mr. Underhill took a short vacation from the automobile business in 1910, going to Lake Tahoe, Cal., where he became intimately associated with the project of which he is now to be the business head. The property not only includes a large hotel at the lake, but a steam railroad line leading thereto and a steamboat transportation company on the lake itself.

Mr. Crockett, who becomes manager of the Knox Automobile Company, Boston branch, also has had long experience in the industry. He formerly was associated with the sale of the Crest cars, and became connected with the Underhill Company in 1905. Two years ago he left that concern to go with the Boston branch of the Locomobile Company of America, which position he left to assume his duties with the Knox company.

ACCOUNTING SYSTEM IN STORAGE STATION.

Efficient Method of Detailed Management Involving Minimum Amount of Work---Interests of Garage and Patron Safeguarded in Thorough Manner.

MANY persons are under the impression that the simple storing of and caring for automobiles requires little or no work and that the chief business lies in the collection of the monthly bills. Doubtless this idea is obtained because of the fact that an exclusive storage business does not demand a machine shop or elaborate service station employing skilled mechanics, but those who enter the field immediately discover that the intricacies of the establishment are nearly as great as in any other branch of the automobile business.

There are many things to look after and unless they are properly accounted for the success of the enterprise is problematical. Here again system will be found to apply with good results. It is necessary, however, to have a system that will cover the peculiar needs of the storage of cars and the supplies and labor that are required to keep them in first class condition.

Perhaps one of the most successful concerns doing an exclusive storage business is Bullock's Auto Station, Providence, R. I. Located in the heart of the residential section of the city, on Seekonk street, it enjoys a large patronage and is filled to capacity at all times. The station proper has accommodations for 24 machines, while in an adjoining building are located 13 private stalls for owners who desire to have their cars accessible only to themselves. Keys to these stalls are given to the owners, who can secure their machines at any time. Of course the office maintains a skeleton key, which will fit all locks in the establishment, merely for the purpose of running the cars out in the event of an emergency or fire. The latter is unlikely to happen, however, since the building is strictly fireproof.

In many instances where owners place their cars in dead storage for a period, the private stalls are utilized and they prove very convenient, since the machines thus in disuse are by themselves and in no way interfere with live storage vehicles. Every detail of the business is carefully supervised and no feature that will work to the advantage and satisfaction of the patrons is overlooked. Therein lies the success of this popular concern.

Although systems vary and can be devised to meet individual requirements, that used by Bullock's Auto Station will serve to illustrate the effectiveness of a simple, labor saving plan. It is the result of five years' experience by the proprietor, Richmond B. Bullock, who has built up an efficient organization. Although no specialty is made of repair work, minor work of this character is done for patrons. Often this is performed at no charge to the regular customer, or at the most, a nominal fee to cover the cost of labor. It is all included in the service to customers, who are quick to appreciate favors extended and who willingly pay a small charge when they realize that a certain minor repair has taken considerable of a workman's time. They have the knowledge that the firm has sought no material profit at their expense and this is also appreciated. Needless to say the relations between patrons and garageman are most cordial.

The principal features of the business are storage, washing and polishing, for which an efficient and simple system is employed to prevent leaks. This is but one method of many that has been selected for its effectiveness. Gasoline and cylinder oil are the chief supplies handled and these are carried in large quantities. The gaso-

Fig. 2—Memorandum Given Patrons at Each Sale, Which May Be Kept for Comparison with Completed Bill.

At Fig. 1 is shown the daily report which is made out by the workmen. This card is nine by 11 inches and is printed on brown, stiff cardboard. No matter what a customer desires it is entered upon this card and the proper amount charged against it in the column reserved for that purpose. Such items are usually on the account of a regular patron who may pay his bill monthly. However, in the case of a transient who pays his bill on the spot, the amount is carried out to the cash column at the side of the card. Thus in adding up the cards it is easy to secure the total of credit business and that of cash sales for each day. The figures presented at Fig. 1 in no way represent those of the concern in question, but are merely used to illustrate the method of utilizing the aforesaid report.

At the time of each sale another small blank, Fig. 2, four by 5.5 inches, on white paper, is filled out and given to the customer as a memorandum that he received the supplies. If the patron has paid the bill it is of course so marked, otherwise merely the goods delivered and the prices are written upon it. The slip is dated and the customer may keep it for comparison with his itemized bill at the end of the month. Mistakes are easily detectable and as easily rectified. Thus the interests of the customer, as well as the garage, are safeguarded effectively.

At the bottom of the daily report, Fig. 1, is a space to record the gasoline meter reading at the time of reporting for work. Since the station is open day and night, this is done twice a day, when the shifts are made. From the illustration it will be learned that the meter reading should have been exactly 600 gallons on the card made out by the foreman of the force which succeeded the one which has gone off duty. Assuming that the tank in question holds a total of 1000 gallons, this shows that 580 had been taken out when it was read previously. The record indicates that 20 gallons were sold, making 600 that have been abstracted, and informing the proprietor that he still has 400 gallons of fuel on hand. To an experienced garage man, any slight difference in the reading of the meter with the reports on the daily cards may be accounted for by an allowance for evaporation. His experience will also inform him whether this evaporation is within reasonable proportions and this becomes a matter which will be adjusted by an exercise of common sense. It readily will be seen that this system of reading the meter and recording the amounts precludes the possibility of a garage employee selling gasoline to transient customers and pocketing the proceeds.

At the conclusion of each day the proprietor or bookkeeper takes the daily report card and enters the various records thereon in a small book composed wholly of loose leaves and attached to a clip in the binding. Each page has a sufficient number of lines to care for a month of ordinary business by a patron of the concern. They are alphabetically arranged in the book and numbered consecutively. Thus at the end of the year it is easy to tell the total number of accounts that have been carried and the total of each, giving the volume of business done. It also will be seen how easy it becomes to total the amount of supplies handled and sold and to arrive at the net profit for the period.

On the blank at Fig. 4, which is the loose leaf page in the account book, on white paper eight by five inches, spaces are reserved for the date, items, page number, the debits and credits, the last named indicating the amounts paid on each account, whether in part or full payment. In the illustration herewith, the payment was in full. When the daily report sheet is utilized and the numerous items thereon transferred to each particular account in the book, it is filed away after having been given a consecutive number. These numbers can be coincident with the number of days that have passed in the current year and therefore are easily found for comparison in case they are needed. At the end of the year they

may be laid aside, the succeeding numbers being merely a repetition from 1 to 365. In this way the accounts are filed away by years and can

Digitized by Google

readily be turned to when any particular one is desired.

The loose leaves in the book are likewise filed away at the closing of the account. The completed bill to the customer is made up from the loose leaf book and in the event of doubt concerning any given account there is the possibility for comparison with the loose leaf blank, the daily report and the receipt given to the customer, provided he has retained it. If he has not, it is of course his own oversight.

The daily report cards can be utilized variously. In a large establishment it is customary to provide one for each workman, in order that the work being done by each employee can be kept separately. In a small garage one card will suffice for all entries, but in this event a space is provided for the number or name of each workman, which is placed in its proper place after each order. This enables a proprietor to save expense in cost of printing needed to carry out his system. Where the business is such that one card is rarely ever sufficient to record a full day's business, the use of several does not affect economy.

The system is easy of operation, the sources of comparison are adequate and each sheet or blank is quickly accessible upon demand. These features are what recommend it as a desirable method of keeping account of the incidentals of a storage establishment. In many instances customers enter a contract with the garage proprietor for storage, washing and polishing at a stated sum each month. In such cases there is no specific charge for washing or polishing, the only extra item being for supplies. However, when such machine is washed or polished, it is recorded upon the daily report card, in order that the proprietor may know how much time is being devoted to the car and be able to figure his profit on the agreement. It also serves to account for the workman's time.

An excellent feature of this system is the blank shown at Fig. 3, printed on white paper 4.25 by 11 inches, on which is recorded the time that cars enter and leave the garage at any period during the 24 hours. The number of the car is entered, the name of the driver and the time he left and returned. In many states it is required by law that such records be kept. In this specific instance this is the case, but the book provided by the state for this purpose proved so ponderous and inconvenient that the illustrated blank was substituted. They are placed on file each day and are readily accessible should they be called for by an official.

These blanks are also made to serve another purpose, as every week a report of each car is made out and submitted to the owner, thus keeping him informed as to the movements of his machine. It will be seen that any unauthorized use of a car can readily be detected by the owner, who appreciates this gratuitous service by the garageman.

Other details which might be considered of minor importance, but which in reality are of decided value, are included in the service to owners. As an instance signs are posted in conspicuous places warning visitors to the garage to refrain

from entering cars or in any other way handling or meddling with them. This rule is rigidly enforced and is a source of protection to owners. An inexperienced person will invariably enter a car and test its starting mechanism. It has happened that such meddling with apparatus of which they know little or nothing has started a car and not knowing how to stop it, the machine has either crashed into another one nearby or into the wall. One car is badly damaged and in some cases two may be wrecked. The garage management under these circumstances is liable, so that no exception is made in enforcing the rule relative to handling cars. This also saves articles from being removed from a machine, as might happen under lax management.

There are many other little details which can be worked out in a garage of this kind which not only make for first class service, but protect the interests of patron and garage alike, thereby cementing the friendliness existing between them and creating a community of interest.

HOPEWELL BROS. WINS.

Result in Action for Alleged Infringement of Tire Case Patent.

Judge Dodge of the United States district court in Boston has decided in favor of the Hopewell Bros., Newton, Mass., in an action brought by C. F. Hopewell against the Linscott Supply Company, involving the determination of the validity of the patent known as the Hopewell tire case patent, and the improvement thereon, or the Kinder tire case patent. The tire cases sold by the Linscott concern were made by the Vehicle Apron & Hood Company, Columbus, O., which defended the suit.

Hopewell Bros. maintained that the first three claims of the Hopewell patent and all the claims of the Kinder patents were infringed. Judge Dodge held that there was no anticipation of the Hopewell patent shown in prior art, although the Vehicle Hood & Apron Company tried to anticipate. He also said that he could not consider such evidence as sufficient and found against the defendant on both these facts.

MULFORD'S BRAENDER TIRES.

How the Shoes That Withstood 500 Miles of Speedway Racing Are Made.

Since it became known that the four Braender tires, made by the Braender Rubber & Tire Company, Rutherford, N. J., and fitted to Ralph Mulford's Mercedes in the 500-mile race on the Indianapolis motor speedway, Memorial Day, went through the entire contest without change, there has been decided interest in this product, particularly as this was the first time in the history of this event that a car had gone the distance without a tire change.

Braender tires are made by the single cure, wrapped tread process, from the highest grade Para rubber and the best combed Sea Island fabric. The single cure tire differs from others in that the mold protrudes only one-third of the distance from the beads, the maker maintaining that this permits the cloth wrapper to compress the tire properly without buckling. The product is manufactured by experienced workmen in a well lighted, modern plant, and each tire is carefully inspected before leaving the factory.

SCREW PLATE REPAIR KIT.

Wiley & Russell Manufacturing Company, Brings Out Complete Screw Cutting Outfit.

The Wiley & Russell Manufacturing Company, Greenfield, Mass., well known maker of screw cutting tools, is marketing the "Lightning" auto repair kit, which should prove a valuable addition to the repair shop and garage, as well as an interesting proposition to owners of model T Ford, Maxwell, Metz and all medium priced cars.

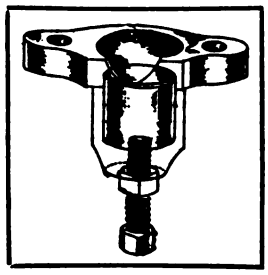
The fine threads used in motor cars make close and accurate fits imperative, else the efficiency of the part is greatly impaired. The screw cutting assortment produced by the company is very complete and was designed with special reference to the screw threads found on the machines above mentioned. It comprises 16 taps, 16 dies, two stocks and two tap wrenches, permitting of the cutting of threads from 18 to 32 an inch, also pipe threads; in fact, the equipment is adapted to a large variety of work and different makes of cars, etc.

The assortment comes in a genuine goat skin leather case having compartments to protect the cutting edges of the tools, and the container is not only very compact, but durable. The same high grade material and workmanship noticeable of the product of the Wiley & Russell Manufacturing Company are incorporated. The company has a very interesting proposition for the trade.

FORD IDEAL ADJUSTERS.

Adapted to Radius and Steering Rods and Prevent Rattling.

John A. Vansickle, 2122 East Washington street, Indianapolis, Ind., is manufacturing the Ideal adjusters, which are designed for model T Ford automobiles and for adjusting the front end of the radius reach rod, also the ball and socket joints of the steering gear connecting rod. The large size is utilized on the radius rod and comprises a socket member of high grade and wear resisting material. It is provided with a set screw, as will be noted in the accompanying illustration. By the use of this screw any existing lost motion may be eliminated. The small size is employed on the steering connection.



Ideal Ford Adjuster.

The adjusters are accurately machined, will fit easily and require but little time to attach. They are guaranteed for the life of the car, and not to work out of adjustment. The manufacturer will give territory and special discount to dealers.

SEVERE MOTOR TEST.

Chicago Man Runs Continental Engine Over 160,000 Miles in His Car.

Edward B. Ellicott of Chicago seven years ago purchased a Continental motor, made by the Continental Motor Manufacturing Company, Detroit, and sufficient other parts to assemble a touring car which would fulfill his ideas of what a real automobile should be like. Mr. Ellicott has used this car continuously winter and summer in and around Chicago. It has never been laid up for any purpose save for painting.

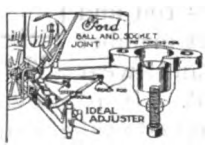
Equip Your FORD with IDEAL ADJUSTERS
BALL AND SOCKET JOINT

Easy to Install
Easy to Adjust
Made Especially for the FORD Car

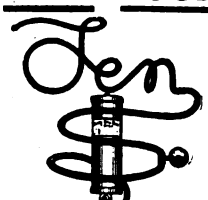


Stop All Noise and Rattle
FORD Radius Rod and Steering Rod

The largest size is used for adjusting front end of radius rod, and enables you to take up at any time all lost motion on these parts, also eliminates the rattle and noise. All this is done by a turn of the setscrew which tightens the bearing on the inside.
The small size is used for adjusting the ball and socket joints on the steering gear connecting rod.
We guarantee all adjusters for the life of a car and they are so simple they can not work out of adjustment or need repair.
WILL FIT ANY FORD MODEL. Will give territory and special discount to dealers. **List Price, Large Size, $2.00; Small Size, $1.75.** If unable to purchase from your dealer, order direct. Manufactured by

JOHN A. VANSICKLE, 2122 East Washington St. INDIANAPOLIS, IND.

TIRE ECONOMY BEGINS WITH A DEWEY POWER TIRE PUMP



$10 Complete
No Extras. Guaranteed For One Year.
Saves You Money and Saves You Work

The Dewey cuts out the labor of tire filling and insures precisely the inflation pressure upon which the guaranty on your tires is based.
The Dewey needs no oil. It is the only tire pump which fulfills every requirement of economy and comfort, with no risk of spraying oil on an expensive inner tube.
The Dewey, with high grade *Dial* and all connections, including 12 ft. of *Special Hose*, tested to 1,000 lbs., sold everywhere under a year's rigid guaranty for **$10**
We can supply you direct if your dealer is not yet supplied. Better ask him first.

For Your Transmissions and Differentials

You want a lubricant that gives adequate service without being so heavy as to "drag".

Dixon's Graphite Grease No. 677

Is a grease of just the right body, with the right proportion of Dixon's pulverized Ticonderoga Flake Graphite added to give the **permanent** lubricating quality so necessary. It quickly gives the gears and bearings a glossy, frictionless surface that minimizes wear and noise, saves power and adds to the life of the car. Write for "Lubricating The Motor", No. 210, giving name, model and year of your car.

"IDEAL" Atomizing Primer

"The Primer that's Different"

Did you ever CRANK and CRANK and CRANK and then wonder why? The Ideal (Atomizing) Primer eliminates hard starting difficulties by forcing only a certain amount of the mixture (contained in the reservoir) into the intake manifold at each stroke of the handle. The mixture (high test gasoline or gasoline and ether mixed) is forced into the different branches of the manifold in an atomized spray, causing quick evaporation and an immediate ignition. This is what you want—with our guaranteed satisfaction or money back.

If your dealer cannot supply you, order direct from Manufacturer.

Complete polished brass $5.00. Nickel plated 10c extra. Special discount to Dealers and Jobbers.

Interstate Auto Accessory Co.

2124 E. Washington Street

PANHARD OIL

Do Your Customers Ever Kick

About the oil they have been using? The moment they do is your chance to jump in with both feet and sell them Panhard. It will stop their kicking with the same ease that it quiets an engine.

When you recommend Panhard Oil to a customer, you are absolutely sure that it will MAKE GOOD every promise you make for it.

You can't be sure of a cheap oil. The only way to build up permanent trade is to handle a better oil than the other fellow around the corner.

You must sell something which will bring your customers back for more. Repeat orders count most in any sound business.

Write now for our "Help Sell" plan for Panhard Oil dealers, and prices at nearest shipping point.

SELL METZ CARS

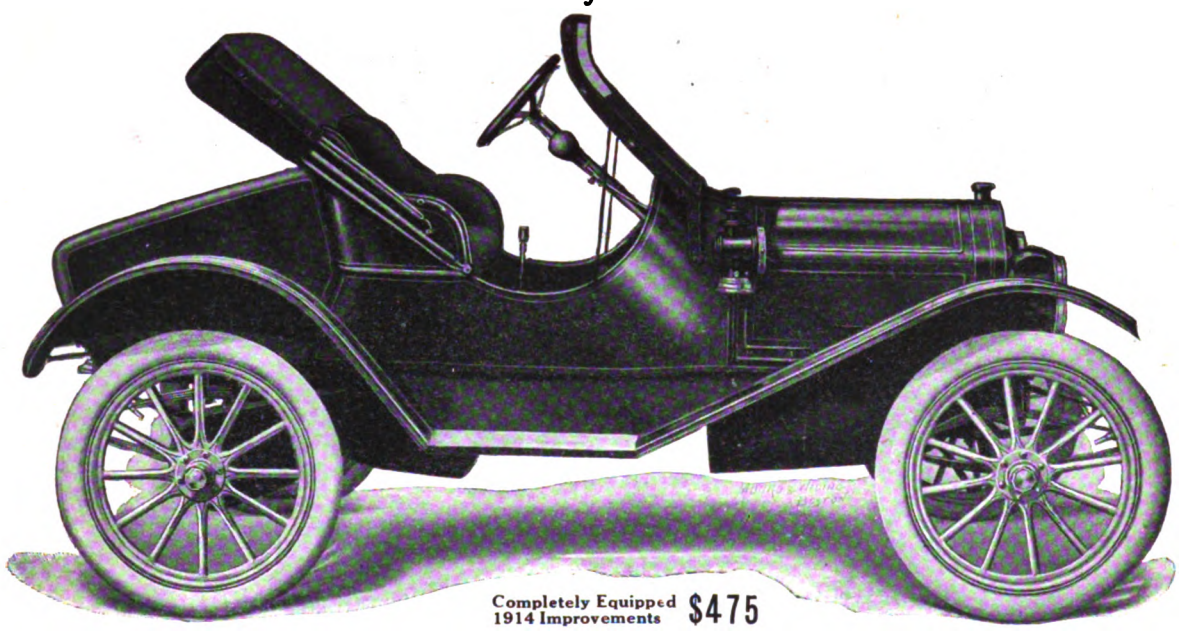
and build up a line of satisfied and enthusiastic customers who will send their friends to you

METZ "22"—$475

WINNER OF THE GLIDDEN TOUR
and both the Glidden and Minneapolis News trophies, is the
LOWEST PRICED CAR ON THE MARKET

THE PROVED EFFICIENCY CAR

We Want a Representative to Handle These Cars in Every City and Town. Write Us for Territory and Liberal Terms.



GEARLESS TRANSMISSION

No Clutch to Slip *No Gears to Strip*

In the Glidden Tour, which started at Minneapolis on July 11th and ended at Glacier National Park on the 19th, the team of three METZ cars was the ONLY team that held a PERFECT record for THE ENTIRE EIGHT DAYS. They were pitted against cars costing from five to ten times as much, yet their nearest competitor made a perfect score for only the first two days.

The METZ "22" was last to leave the noon control on the final day of the race, passed all the cars ahead, and when ten miles from the goal caught the pace-maker and crowded him over the last mountain range, finishing with twenty minutes to spare!

The **METZ** "22" is a roadster car of the torpedo semi-enclosed type, left hand drive, center control. It makes from 5 to 50 miles per hour on the high speed, travels from 28 to 32 miles on ONE gallon of gasoline, 100 miles on ONE pint of lubricating oil, and from 10,000 to 12,000 miles on a single set of tires.

It is the most economical car on the market to operate. Climbs hills as fast as any regular stock car made. Takes many hills on the high speed that are steep enough to force the big touring cars to drop back on low speed.

Equipment—4-cylinder 22½ h. p. water-cooled motor, Bosch magneto, windshield, extension top with cover slip and curtains, full elliptic springs all around, standard artillery wheels, best quality Goodrich clincher tires, five lamps and gas generator, horn, pump and tool outfit.

Built to carry either single or double rumble seat, if desired. Its gearless transmission entirely does away with aggravating and expensive "gear troubles."

Reasonably prompt deliveries. Write for dealers' terms and New Illustrated Catalog "F."

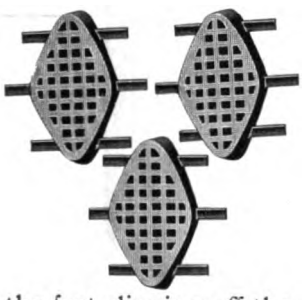
SIX LIVE

APCO FORD SPECIALTIES APCO

Rubber Pedal Pads

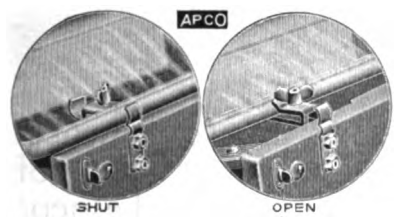


These are one of the most useful and appreciated accessories we have ever offered. They are made from real live, soft rubber, not composition or papier mache. They eliminate the vibration that comes from the engine and prevent the feet slipping off the pedals. These act a good deal like rubber heels and they are fastened in place by simply clamping the steel strips around the foot pedals. **PRICE for set of three, $1.50.**

Mahogany Door Strips

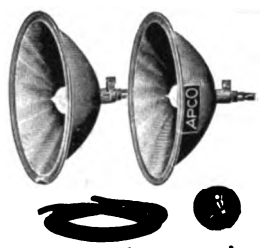
These are made from high grade imported mahogany, finished with a number of coats of varnish and stained a deep rich red. The steel strips on the doors at present are not handsome and our strips make your car look 100% better. They are furnished complete with screws and washers. **PRICE, $2.00.**

Ford Windshield Ventilators



These ventilators are designed to fit any Model "T" Ford and if the number of inquiries we are receiving for a device of this kind is anything to go by, we shall have hard work keeping ahead of our orders. The APCO Ventilators consist of two brackets that fasten to the dash in place of the clips now holding the windshield. They are placed in position without drilling holes or doing any machine work whatever and when put on it is a very simple matter to adjust them. The object of the device is to throw the windshield back about two inches, thereby forcing a strong draft around the floor of the front compartment. You know you need this device and at the price, you cannot afford the discomfort it eliminates. Cut shows shield open and closed. They are made from bronze enamelled black and the **price is $2.50 per complete set.**

Lighting Outfit No. 2



This consists of two silver-plated reflectors, two Ediswan Bayonet Connectors, two genuine tungsten bulbs with drawn wire filament, 6 volt, 15 C. P., 12 feet primary linen covered wire, high grade hard rubber switch with removable nickelled handle, and in fact a complete equipment to change the present lights on your car from gas to electricity. We make and sell more Ford Lighting Outfits than any two concerns in the country and this is why we can quote such low prices on an article we guarantee to be as good as any on the market. **PRICE, including directions, $4.00. Bulbs, 50c.**

Oil Gauge

This device needs no introduction to the Ford owner and is a necessity that you cannot afford to be without. We are the originators of the Ford Oil Gauge and our four years' experience, covering nearly 200,000 gauges, has shown us some necessary points on a gauge that the other fellows do not think necessary. Our price is as low as a good gauge can be made for and for the sake of a few cents don't buy one of the small kind that are absolutely useless after a ten-mile run. This gauge takes the place of the lower petcock on the Ford crank case and tells where the oil is at all times. **PRICE Without Petcock (which is taken from the car), 50c.**

Tool Box

This is designed to be carried on the running board of the 1913 Ford Touring Car. It is built low to permit of the door opening and it is long enough to take the pump. The box is made from heavy gauge steel handsomely finished and furnished with lock and key. **PRICE, $3.50.**

A Familiar Sight

In garages both public and private, in supply shops, and on the road, the green and red Texaco can is a familiar sight.

Is it a familiar sight in your garage? Is the sales-boosting Texaco sign on the outside of your building?

TEXACO
MOTOR OIL

the Texaco can, and the Texaco sign, are advertised to nine car owners out of every ten. This publicity, coupled with the high quality of Texaco Motor Oil, is an actual asset to every dealer who carries Texaco. If you are not one of thousands who display the Texaco Sign on your garage you are overlooking an opportunity. Remember, this sign —and the garage that shows it—is extensively advertised to the car owner. Thousands of tourists will be looking for it this summer. You can get part of their trade.

Write us for details of our dealer-aid plan and prices on Texaco Motor Oil. Address Dept. 8,

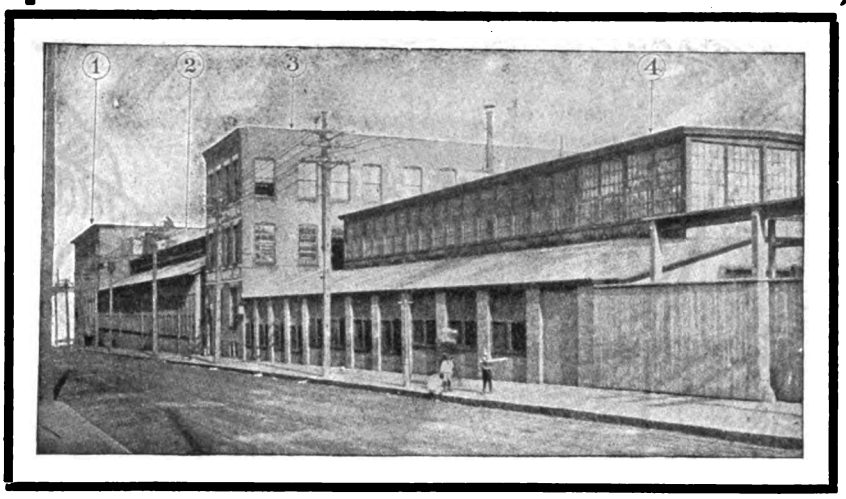
An Opportunity for a Big Auto Truck Garage and Repair Business in Providence, R. I.



THE GROWTH OF A LARGE MANUFACTURING COMPANY ENABLES US TO OFFER FOR SALE THE ABOVE PLANT, SPLENDIDLY LOCATED IN THE CENTRE OF THE WHOLESALE, WAREHOUSE AND MANUFACTURING SECTION OF PROVIDENCE.

The General Fire Extinguisher Company has outgrown its Providence Foundry Department and has been forced to combine it with its Auburn, R. I., plant, where large additions have just been made. The removal of the Company from this part of its Providence plant offers a splendid opportunity for the institution of a garage and repair shop. Motor trucking is bound to increase rapidly which will make the need of a centrally located place of this character well nigh imperative. The property we are now offering for sale is ideally located for just such a business for it is convenient and easily accessible to the many large business houses which are situated in that vicinity.

Building No. 1.

Building No. 3.

The plant is fully equipped with Grinnell Automatic Sprinklers, thus insuring low insurance rates. It is also piped for heating. The property will be sold as a unit or divided into nine parcels on five of which there are buildings as follows:

Building No. 1.—Three stories and high basement, brick, heavy construction, about 113.2x75.2 feet, adjoining and communicating with Building No. 2.

Building No. 2.—High, one story, brick and frame foundry, with monitor roof, about 199.6x75.2 feet, adjoining and communicating with Building No. 1 and Building No. 3.

Building No. 3.—Three stories and high basement, brick, heavy construction, about 33.2x110.7 feet, adjoining and communicating with Building No. 2 and Building No. 4.

Building No. 2.

Building No. 4.—Brick and frame foundry, with monitor roof, about 120x55 feet, adjoining and communicating with Building No. 3.

Building No. 5.—One story, brick and stone, about 312.3x25 feet, separated from main buildings by driveway and connected by two overhead passageways.

The land fronts about 507.82 feet on West Exchange Street, about 219.30 feet on Bradford Street, about 257.12 feet on Cedar Street, containing an area of about 84,064.46 square feet.

Building No. 4.

Illustrated circular, prices and all further information may be obtained by applying to

METZ TEAM WINS GLIDDEN TROPHY.

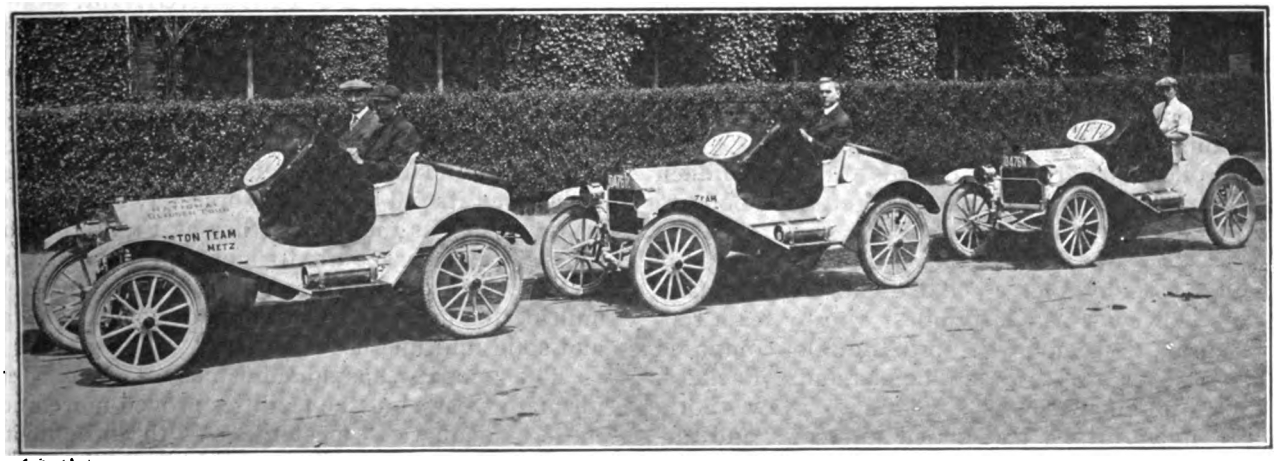
Small Cars Outclass Larger Machines in National Reliability Tour Across North Dakota and Montana—Chain Driven Locomobile Takes New A. A. A. Cup.

TO THE Metz team goes the honor of winning the famous Glidden trophy in the ninth national reliability tour of the American Automobile Association, which came to an end in Glacier national park, Montana, Saturday, July 19. The new A. A. A. trophy, which was substituted for the Glidden award in the touring car class this year, was won by a chain driven Locomobile, driven by Dr. J. D. Parks of Duluth, Minn. The Anderson trophy for runabouts, presented by the citizens of Anderson, S. C., in 1911, was awarded by lot, the decision resting between the three Metz cars, the two Hupmobiles and a K-R-I-T. The drawing was in favor of the Hupmobile No. 15, driven by C. Munzer. Hupmobile No. 14, driven by W. W. Munzer, retains permanent possession of the Minneapolis Daily News trophy, this having been won by a Hupmobile last year in the tour, Minneapolis to Winnipeg and return.

The three little Metz cars acquitted themselves most creditably, going the entire distance of 1233.1 miles from Minneapolis, Minn., to the Glacier national park without a mark, being the only team of three to make this record. Two Hupmobiles also made perfect scores, but there were only two machines in the team. In all respects the smaller cars showed up to much better advantage than the larger in this test. And that it was a severe test is proved by the fact that the roads across North Dakota and Montana are far from ideal, and recent rains had not improved the conditions. It was with the utmost difficulty that certain passages of the highway were negotiated.

Penalties were inflicted for being late at the controls only, as was the case of the national tour of 1911, and they were mostly imposed during the first three days, when there was almost continual rain. Delays were frequent while covering the worst roads, a number of the cars becoming imbedded in the deep mud, necessitating assistance to haul them out.

The tour lasted eight days and too much

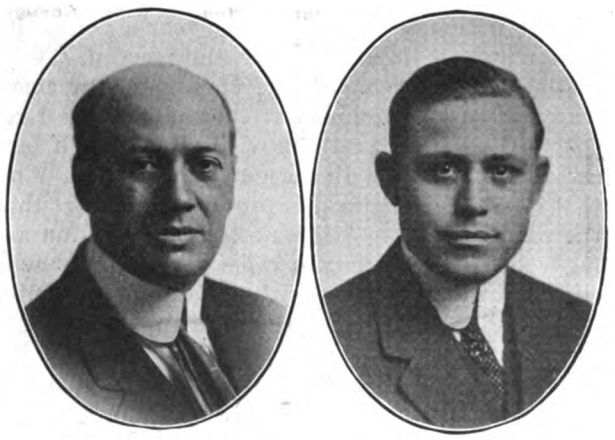


The Team of Three Metz 22.5 Horsepower, Friction Driven Cars, Which Captured the Glidden Trophy in the Ninth National Reliability Run.

Digitized by Google

credit cannot be given to the Metz team for winning the famous award, which for the past eight years has been a coveted possession to be displayed at the annual shows and on all other prominent occasions by the winner. The trophy was donated by Charles J. Glidden early in 1905, soon after the completion of the first national reliability tour. With two exceptions it has been awarded annually since that time.

The Metz is the product of the Metz Company, Waltham, Mass. It has a four-cylinder, water-cooled motor, cast en bloc, with bore of 3.75 inches and stroke of four. It is rated at 22.5 horsepower. Lubrication is by the constant level splash system, the level being maintained by a pump. Cooling is by the thermo-syphon system. Ignition is by Bosch high-tension magneto. The carburetor is of the float feed automatic type. The clutch is a friction plate applied to the driving ring, the drive being by friction discs with chains running in oil. The springs are full elliptic all around. Two sets of brakes are fitted, internal expanding on rear wheel drums and external contracting on jackshaft. The wheels are of the artillery type, fitted with 30 by three-inch tires. The



J. G. Monihan, Associate Director Sales and Advertising, and E. F. Harris, Promoted to Field Sales Manager, Cole Motor Car Company.

driver is placed at the left, with centre control levers.

According to information obtained, the Locomobile driven by Dr. Parks, which won the A. A. A. trophy, had a record of more than 100,000 miles before it entered the tour. No mention was made of the date of its production, but it was a chain driven model, and the Locomobile Company of America, Bridgeport, Conn., ceased making chain driven cars in 1909.

Following are the records of the Glidden trophy: 1905—New York to Bretton Woods to New York, 871 miles, won by Pierce car. 1906—New York to Buffalo to Bretton Woods, 1135 miles, won by Pierce. 1907—Cleveland to Chicago to New York, 1570 miles, won by team representing Automobile Club of Buffalo, composed of two Pierce-Arrows, a Thomas and a Packard. 1908—Buffalo to New England to New York, 1670 miles, three teams tied in score and arranged to run it off at a later date. But one of the teams appeared and this refused to cross the starting line and no award was made. 1909—Detroit to Kansas City, 2533 miles, won by Pierce-Arrow. 1910—Cincinnati to Southwest to Chicago, 2851 miles, won by Chalmers. 1911—New York to Jacksonville, 1454 miles, won by Maxwell. 1913—Minneapolis to Glacier park, 1233 miles, won by Metz. There was no Glidden tour in 1912.

JOINS THE COLE FORCE.

J. G. Monihan Becomes a Member of Homer McKee's Sales Organization.

John Guy Monihan of the Premier Motor Manufacturing Company, Indianapolis, Ind., maker of Premier cars, has become associate director of sales and advertising of the Cole Motor Car Company, Indianapolis, maker of Cole machines. This is in accordance with the plans for expansion worked out by Homer McKee, director of sales and advertising, at the suggestion of President J. J. Cole. Edward F. Harris, whose work in the sales department of the Cole organization justified his advancement, has been promoted to field sales manager. This expansion follows closely on the recent announcement of increase in Cole stock to $1,000,000, the doubling of the Cole output and the closing of a contract for another big addition to the factory on East Washington street.

In securing Mr. Monihan, Mr. Cole believes that his already strong sales and advertising organization has been materially strengthened. Mr. Monihan has been in the automobile business for the past five years. His most recent experience has been with the Premier company, where he was closely associated with President H. O. Smith and R. W. Macey. With his co-operation Premier business has steadily increased. He was the originator of the amateur transcontinental ocean-to-ocean tour in 1911 and has won a name as a sales lecturer. He has written several books and is a member of numerous clubs and organizations throughout the country.

REMOVES TO FRAMINGHAM.

Standard Woven Fabric Company Secures Larger Facilities for Production.

The Standard Woven Fabric Company has abandoned its old plant at Worcester, Mass., and is occupying its modern factory at Framingham, Mass., which was built to meet the decided increase which there has been in the demand for multibestos brake lining, standard woven belting and solid multiple hose fabrics.

The company has done business at Worcester for many years, but the facilities proved more and more inadequate to meet the growth and expansion of the concern. The new factory will permit of the manufacture of goods on a larger scale and on a much more economical basis.

GOODYEAR ELECTRIC TIRE.

Well Known Maker Announces New Product Will Be Ready Shortly.

L. C. Rockhill, manager of the automobile tire department of the Goodyear Tire & Rubber Company, has returned to the factory in Akron, O., after an extended tour of the Pacific Coast section, investigating motor car conditions in that portion of the country. Shortly after his return he announced a new electric vehicle tire, to be known as the Goodyear Power Saver pneumatic tire, which he says will be ready for distribution at the various branches of the company about the middle of the month.

The new tire is the result of long experience on the part of the engineers connected with the Goodyear company, and is expected to afford the maximum of efficiency in every respect. In discussing the matter Mr. Rockhill mentions that very few people diffentiate between tires for gasoline cars and those especially built for electrics, although he says any automobile engineer knows that the former absorbs more energy than the latter. In order to secure a product that should prove satisfactory in every respect, the company is using only the better grade of gum and the very best cotton in an effort to obtain extreme durability without loss of resiliency.

H. S. Quine, manager of the advertising department of this company, also makes an announcement, in which a proposition is placed before Goodyear dealers whereby they can co-operate with the company in securing road signs at a saving of some 82 per cent. of the cost. The signs are lithographed on steel, 10 by 28 inches, and besides calling attention to the merits of Goodyear No-Rim-Cut tires, carry the advertisement of the local dealer. The plan is advanced as another step in the effort of the Goodyear company to co-operate with its representatives in every way possible.

REO COMPANY'S DIVIDENDS.

Directors Place Stock on 10 Per Cent. Basis with Quarterly Payments.

At a recent meeting of the board of directors of the Reo Motor Car Company, Lansing, Mich., maker of Reo cars, it was unanimously voted to place the stock of the company on a 10 per cent. annual dividend basis, payable quarterly.

The dates upon which the quarterly dividends will be payable were fixed as the first of July, October, January and April.

TO SELL CUTTING PLANT.

Receiver Secures Authority from United States Court for Disposal of Property.

The Security Trust Company, Detroit, receiver for the Cutting Motor Car Company, Jackson, Mich., will sell, by order of the United States court, the entire plant of the company at public auction on the premises at Jackson, Tuesday, Aug. 5. The property will be offered both in parcels and in bulk. Successful bidders must deposit 25 per cent. of the amount bid with the receiver at the time of sale, the remainder to be paid upon the confirmation of sale by the court.

The Cutting company owns, in fee and on land contract, about 1.5 acres of land. The main building, a modern structure with up-to-date equipment, adapted to the making of motor cars or kindred articles, contains about 60,000 square feet of floor space. There is a repair business on the cars now in use which will prove an attractive proposition in connection with a machine shop. The inventory and appraisal follow:

	Inventory	Appraisal
Manufacturing stock	$70,450.37	$59.882.76
Service department stock (parts)	42,450.13	27,592.58
Merchandise located outside of factory	9,123.14	7,754.67

GENERAL MARKET CHANGES.

The market changes the week beginning Wednesday, July 16, were few, the most notable change being in cottonseed oil, which made a large increase, the price per barrel being 24 cents more than the opening price. This was due solely to the fact that oil is scarce so far as its availability for the market is concerned. The quotations will be found in the table above.

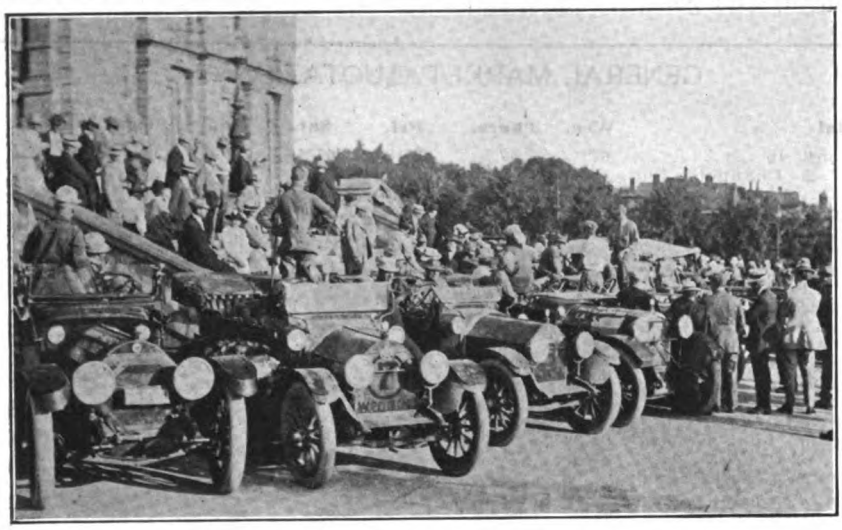
INDIANA TOURISTS FINISH JOURNEY.

THE Indiana-Pacific Coast tour of the Indiana Automobile Manufacturers' Association, which came to an end in San Francisco, Cal., July 27, assumed the nature of a constant triumphal procession across the continent, from the start at Indianapolis, July 1. All kinds of weather and travelling conditions were encountered by the tourists, whose journey, although being mainly for the purpose of calling attention to Indiana products, took on a much greater importance throughout the country, inasmuch as the route was laid over what is probably to be the Lincoln transcontinental highway, which it is planned to have completed by 1915 at a cost of $10,0000,000.

The tour also served to demonstrate forcibly the reliability and endurance of the modern motor car. The crossing of the great Continental Divide, near Denver, Col., was a feat that called for the most severe tests of the machines. In four miles the cars climbed 3000 feet, the last 1000 feet being covered in one mile. Some of the grades were as high as 20 per cent., and the altitude affected the power of the motors very materially. The ride down the other side was sufficient to offer tests quite as effective as the upward climb. Sharp turns, steep grades with a cliff on one side and a drop of thousands of feet on the other, narrow roads just wide enough for one car, with turnouts at frequent intervals, made good brakes decidedly essential.



Cars on the Indiana Automobile Manufacturers' Association's Transcontinental Tour in Front of the State Capitol at Denver.

The Garden of the Gods, Crystal park and Ute pass were visited before leaving Denver, the trip being made in local cars with the exception of Ray Harroun, who desired to test his kerosene carburetor, attached to a Henderson car, in that altitude, which is said to be 11,000 feet. He reported that his machine showed better results than those equipped with gasoline vaporizers, due, he said, to the lower vaporization point of the fuel and the decreased atmospheric pressure. During the trip from Indianapolis to Salt Lake City, Utah, the Henderson car averaged 19.5 miles a gallon of kerosene, the average cost of which, purchased at retail, was 10.25 cents a gallon.

The tourists entered California at noon, July 23. On July 25 Lake Tahoe was reached after a 14-mile drive, 12 of which covered a grade of 8000 feet. The tourists were met by San Francisco, Sacramento and Oakland newspapermen, who escorted them during the remainder of the journey. Members of the party were constantly invited along the route to deliver addresses on the good roads movement. No accidents of a serious nature developed, although there were numerous thrilling experiences, as for instance those in the rear of the column were caught in a cloudburst in the midst of the Utah desert between Thompsons and Green River. Although some of the machines were mired in the mud, there were no accidents. The tour is one of the most notable on record and that it has stimulated great interest and given an added impetus to the cause of good roads cannot be denied.

The cars making the trip are as follows: American 1 and 2, American Motors Company, Indianapolis; Henderson 3 and 4, Henderson Motor Car Company, Indianapolis; Stutz 5 and 6, Ideal Motor Car Company, Indianapolis; Marion 7 and 8, Marion Motor Car Company, Indianapolis; Premier 9 and 10, Premier Motor Manufacturing Company, Indianapolis; Haynes 12 and 13, Haynes Automobile Company, Kokomo; Pathfinder 14, Motor Car Manufacturing Company, Indianapolis; McFarlan 16, McFarlan Motor Car Company, Connersville; Apperson 17 and 18, Apperson Bros. Automobile Company, Kokomo; Empire 19, Empire Automobile Company, Indianapolis; Pilot 20 and 21, Pilot Motor Car Company, Richmond; Marmon 22, Nordyke & Marmon Company, Indianapolis; Brown tire truck, Brown Commercial Car Company, Peru; Premier tire truck, Premier Motor Manufacturing Company, Indianapolis.

Renewing an association of years' standing, Frank H. Smith, formerly of the Studebaker and Maxwell companies, has joined the sales staff of the Lozier Motor Company, Detroit, maker of Lozier cars, under Sales Manager Paul Smith. Frank Smith was formerly assistant to Paul Smith when the latter was sales manager of the Studebaker Corporation, and although the two men are not related, they were constantly being introduced as brothers.

The new series of KisselKar pleasure cars will consist of three chassis models, a four-cylinder 40 horsepower, a 6-48 and a 6-60.

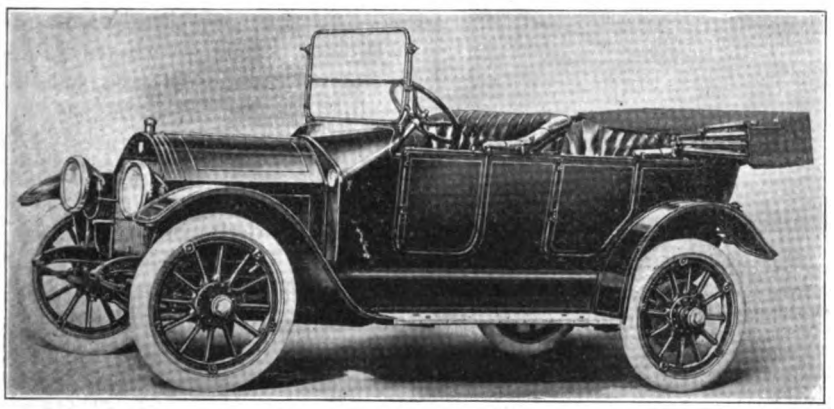
NEW MODEL B ADDED TO KING LINE.

ANNOUNCEMENT is made of a new type car by the King Motor Car Company of Detroit, to be known as the model B and to be produced in one chassis design, to which will be fitted two bodies, a two-passenger with sloping rear deck and a five-passenger with rounded back and torpedo shroud. Although selling for $1095, the car is completely equipped, including electric lighting, and the maker states that the material and workmanship are strictly high grade in every particular. It was designed to give maximum service with a minimum of upkeep and includes features usually found in high priced machines.



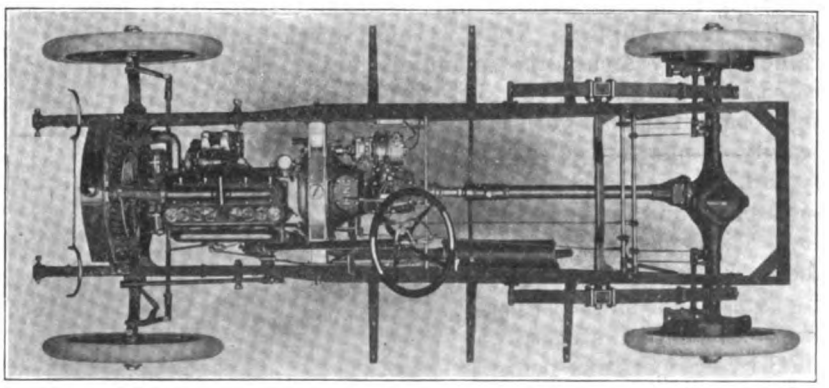
King Model B Five-Passenger Touring Car, Selling for $1095 and Being Fully Equipped, Including Electric Lighting.

One of the features of the new design is the use of the King patent floating cantilever spring, a construction which is a modification of the Lanchester type, fitted to a prominent English make of car. Each spring is pivotally supported, near its centre, on a bracket secured to the frame. The front end of the spring is securely attached to the frame by a special hanger or slotted bracket, permitting of endwise movement, but eliminating side play. The rear end is attached by plates, and bolts to a sleeve which pivots on the tube enclosing the rear axle. Reverse leaves are built up with the spring, each spring having one leaf on the underside at the centre and at the rear end. These leaves do not stiffen the spring normally, but come into action on the recoil or extreme deflection. The construction is held to eliminate the possibility of breakage, and to absorb all vibration and shocks, dispensing with shock absorbers and providing ample road clearance.

The motor is a four-cylinder unit, of the L head en bloc type, having a bore of 3.875 inches and stroke of five, rated at 30-35 horsepower by the maker. The power plant, clutch and transmission are a unit that is suspended in the frame at three points. The bearings and shafts of the motor are liberal in size and lubrication is by a force feed and splash system, provision being made for maintaining a constant and proper level at all times. The clutch is a multiple disc, comprising six driving members faced with Raybestos and six driven steel discs. Ignition is by a Briggs dual type magneto. Cooling is by thermo-syphon.

The transmission is of the selective type, providing three forward speeds, and the gears and shafts are liberal in size, rotating on roller bearings. Drive from the gearset to the rear axle is through a Spicer universal joint, and the shaft is enclosed in a torque tube. The frame is constructed of pressed steel, is of ample size and has the conventional kick-up at the rear. The rear axle is of the full floating type. The gears and axles are liberal in size and all components are readily accessible. External and internal brakes on 14-inch drums are fitted, and the steering gear is a Gemmer, irreversible. The wheel is 18 inches in diameter. The general specifications are as follows:

Motor—Four-cylinder, cast en bloc, enclosed valves, three bearing crankshaft, three point suspension.
Transmission—Selective, three speeds forward, one reverse.
Control—Centre gear change and emergency brake; driver at left.
Clutch—Multiple disc, 12 plates.
Ignition—Dual Briggs magneto.
Carburetor—Stromberg.
Cooling—Thermo-syphon.
Frame—Pressed steel.
Axles—Front, drop forged I beam; rear, full floating.
Bearings—Hyatt high duty roller.
Brakes—Service, external contracting; emergency, internal expanding, 14 inches diameter, 2.5-inch face.
Steering Gear—Gemmer, irreversible; 18-inch wheel.
Springs—Front, semi-elliptic; rear, King cantilever.
Wheels—Artillery, demountable rims; tires, Goodyear, 33 by four.
Wheelbase—112 inches; tread, 56 inches, 60 optional.
Bodies—Two and five-passenger.
Lighting—Electric. Motor starter and generator, $100 extra.
Equipment—Rain vision, ventilating windshield, silk mohair top, quick detachable curtains, speedometer, electric horn, tire irons, pump, jack, tire repair kit, tools and one extra rim.
Finish—Dark blue and black and nickel trimmings.



Top View of King Chassis, Having Patent Cantilever Spring and Being Constructed of High Grade Material Throughout.

Although an electric lighting equipment is provided, the Ward Leonard combined electric motor starter and generator is listed as $100 ex-

The Buildings of the Plant of the General Fire Extinguisher Company in West Exchange Street, Providence, R. I.

tra. The designer of the car, Charles B. King, is well known, having been identified with the automobile industry since 1893, at which time he designed a car. The King Motor Car Company has an interesting proposition for dealers, who are invited to write for particulars as to territory, etc.

DISPOSITION TO BE MADE OF FACTORY.

Excellent Opportunity to Establish Immense Motor Truck Garage at Providence, R. I.

The abandonment of the Providence, R. I., plant of the General Fire Extinguisher Company and the concentration of the business at Auburn, R. I., opens an opportunity for the establishment of an immense motor truck garage and repair shop, for this property, especially adapted for manufacturing purposes, is splendidly located in the centre of the wholesale, warehouse and manufacturing section of the city. The plant consists of five buildings having frontage of 507.82 feet on Exchange street, and the land has frontage of 219.30 feet on Bradford street and 257.12 on Cedar street, the area being 84,664.46 square feet. Four of these buildings have direct communication with each other, and the fifth is connected by two overhead passages.

Building No. 1 is of brick, having heavy construction, three stories and high basement, 113.2 by 75.2 feet; building No. 2 is high brick and frame foundry structure, splendidly built, 199.6 by 75.2 feet; building No. 3 is three stories and high basement, of brick, heavily constructed, 33.2 by 110.7 feet; building No. 4 is a brick and frame foundry, with monitor roof, about 120 by 55 feet; building No. 5 is a single story brick and stone structure 312.3 by 25 feet, this being separated from the main buildings, but connected by two passages. The buildings are piped for steam heat and equipped with a Grinnell automatic sprinkler system, the latter affording very low insurance rates.

The property is convenient to every business section of Providence and would be ideal for a garage suited for any kind of manufacturing. All information, illustrative and descriptive, can be obtained from G. L. & H. J. Gross, managers of estates, 170 Westminster street, Providence. The property will be sold as a unit, or divided into nine parts, on five of which are buildings. The buildings have a floor area of approximately 78,000 feet, and there is sufficient space unoccupied by structures to meet almost any character of expansion without adding to those now standing, if it would be desirable to retain them in their present form.

REMOVES TO CONNECTICUT.

Cameron Manufacturing Company Purchases New Plant in West Haven.

It is announced that the entire plant of the Cameron Manufacturing Company, Beverly, Mass., maker of Cameron pleasure and commercial cars, will be removed to West Haven, Conn., where the factory formerly occupied by the Mathushek Piano Company has been purchased. The concern has been in Beverly for the past six years, but for some time it has been seeking a better location where financial and shipping conditions would result in improved manufacturing facilities.

The Cameron Company is incorporated under the laws of Connecticut with a capital of $1,000,000, of which $200,000 will be placed with New Haven men. The new factory provides about 75,000 square feet of floor space, and has been idle for about a year. It is planned to produce 1000 machines for 1914, and it is expected that the plant will employ about 250 men when in operation shortly after Aug. 1.

E. S. Cameron, the designer of the Cameron car, is well known in the motor car industry. He is said to be the first engineer in the country to produce a steam car with a shaft drive.

GENERAL NEWS OF THE INDUSTRY.

Latest Information of the Activities of Manufacturers and Dealers, New Concerns, and Removals, Incorporations, Building Operations, Changes in Personnel, Etc.

INCORPORATIONS.

The following concerns have been incorporated recently to manufacture or deal in motor cars, accessories, supplies, etc.:

Darling Automobile Manufacturing Company, Britton, Okla.; $25,000; C. P. Stealey, A. W. Hedge, H. O. Crum, George E. Crawford, S. L. Sintaffer, D. L. Sellers, W. C. Settle, H. S. Emmerson, C. L. Stealey.

Chattanooga Buick Company, Chattanooga, Tenn.; $15,000; K. McKarger, George D. Lancaster, P. Campbell, H. C. McVey.

Original Puncture Fix Company, Dallas, Tex.; $5000; A. Marks, Vincent L. Hughes, A. F. Weisberg.

Sacred Heart Automobile Company, Sacred Heart, Minn.; $10,000; J. H. Sagnes, P. O. Melsneas, T. Arestad, W. A. Day, E. P. Dosseth.

Platte Center Automobile Company, Platte Center, Neb.; $15,000; E. J. Macken and others.

Auto Owners' Sales Company, Los Angeles, Cal.; $10,000; A. G. Heskett, F. L. Toombs.

Autopart Company, Los Angeles, Cal.; $10,000; H. L. Kimmell, W. C. Hanson, John H. Lane.

Michigan Motor Car Company, Memphis, Tenn.; $5000; I. Bennett, C. V. York, J. J. Carrigan.

F. P. Motor Wagon Company, Pierre, S. D.; $250,000; Thomas F. Graham, Edward E. Slade, William G. Price, R. J. Reynolds, L. L. Stephens.

Pacific KisselKar Company, San Francisco, Cal.; $500,000; G. W. Emmons, H. K. Butterfield, E. Roger Stearns, G. A. Kissel.

Empire Auto Company, Webb City, Mo.; $2400; W. L. Miller, J. Caesar, W. S. Miller.

Canham Auto Company, Wahpeton, N. D.; $25,000; Roland Canham and others.

West Motor Car Company, Topeka, Kan.; $10,000; H. G. West, F. Langley, L. Langley, J. E. Folley, F. A. Folley.

St. Louis Motor 'Bus Company, St. Louis, Mo.; $2000; Robert J. Kirkwood, James A. Rector, Walter R. Wayne.

Western Co-Operative Auto Supply Company, Topeka, Kan.; $25,000; M. T. Kemper, M. C. Wells, J. H. Walters, T. R. Paxton, J. R. Mulvane.

Variable Clutch & Variable Transmission Company, Seattle, Wash.; $100,000; to manufacture clutches and transmissions; C. E. Lawson, H. A. Emery and others.

Velie Motor Car Company, Salt Lake City, Utah; $5000; Thomas E. Kelly, J. R. Hall, O. M. Olsen.

Davis Livery & Motor Car Company, San Antonio, Tex.; $10,000; E. E. Davis, Earl Wood, R. L. Aspley.

Himeloch Auto & Taxi Company, $1000; Isaac Himeloch, Joseph Himeloch.

Liquid Tire Company, Kansas City, Mo.; $125,000; Charles S. Wright, George L. Schofield, Clay W. Prewett.

E. Landis Auto Company, Kansas City, Mo.; $5000; Emanual Landis, M. J. Oldham, W. G. Bryant, M. S. Kenney, W. J. Gregg.

American Motor Company, Galveston, Tex.; $2000; John Christensen, John Rasmussen, Gaston Weigel.

American Gas Engine Company, Davenport, Ia.; $500,000; J. E. Burmeister, A. Clifford, C. A. McCune.

Texas Carriage & Top Company, $10,000; John R. Patton, Charles E. Gardner, S. U. Turney.

Clark-Lilly Motor Car & Machine Company, San Diego, Cal.; $50,000; C. C. Clark, T. J. Lilly, Morris Binnard.

Deseret Motor Truck Company, Salt Lake City, Utah; $50,000; Ira Cole, Domonie Burns, J. E. Fleige.

W. L. Mantha Company, Bayport, N. Y.; $1000; W. L. Mantha, N. F. Mantha.

Bellefonte Automobile Manufacturing Company, Bellefonte, Penn.; to manufacture automobiles; F. Beakley, W. P. Sieg, E. A. Parrish.

A. B. C. Automobile Company, Port Chester, N. Y.; $1000; W. D. Sporberg, W. F. Gainey, T. F. J. Connolly.

Lurie Auto Company, New York City; $1000; S. S. Rosenberg, I. R. Caplan, C. U. Backer.

Britton-Stevens Motor Corporation, Boston, Mass.; $50,000; W. H. Britton, G. D. Stevens.

Chicago Universal Motor Truck Company, Chicago; $10,000; E. C. Rockwell, J. H. Dunn, C. M. Stevens.

Mehler Motor Car Sales Company, Los Angeles, Cal.; $5000; R. W. Mehler, J. J. Bacigalupi, P. Borden, D. L. Jones.

Auto Carriage Company, Cleveland, O.; $10,000; A. E. Bernsteen, E. B. Zwirk, Samuel Solker, M. L. Bernsteen, J. Nungesser.

Gloor Motor Truck Company, Chicago; $25,000; to manufacture trucks; J. T. Devere, H. L. O'Meara, J. N. Chapman.

G. A. Schacht Motor Truck Company, Cincinnati, O.; $35,000; to manufacture trucks; Gustav Schacht, William Schacht, Charles R. Talbott, T. C. Jung, M. L. Buchwalter.

Mission Automobile & Realty Company, Los Angeles, Cal.; $10,000; N. Ledgerwood, J. R. Matthews, I. S. Isenogle.

Mansur Motor Truck Company, Haverhill, Mass.; $30,000; C. B. Mansur, K. L. Moses, N. L. Furbush.

American Automobile Exchange, Indianapolis, Ind.; $25,000; Wilbur Wyant, W. R. Luke, E. C. Brennan.

A. & N. Automobile Company, New York City; $1000; to manufacture an automobile gas starter; E. C. Allison, H. B. Newins, I. N. Highby.

Paxson Auto Livery, Elkhart, Ind.; $10,000; C. E. Paxson, Samuel Gayman, Clyde Paxson.

Southern Tire & Supply Company, Jacksonville, Fla.; $12,000; Samuel Dunlap, H. E. Perryman, C. E. Brown.

Long Beach Motor Supply Company, Los Angeles, Cal.; $10,000; R. F. Ingold, S. D. Weil, Edward Cooper.

Hillman Taxi Service Company, Mobile, Ala.; $2000; G. D. Hillman, M. F. Hillman, Rosina Hillman.

Alhambra Auto Painting & Trimming Company, New York City; Adolph Horenstein, Max Marcus, Herman Marcus.

Pogue Garage Company, Fairbanks, Ind.; $30,000; James Bradbury, T. Johnson, H. Holmes.

Oxford Garage Company, Boston, Mass.; $10,000; L. D. Robbins, E. L. Brown, S. B. Ingalls.

General Tourist Company, Brooklyn, N. Y.; $25,000; S. E. Cooper, N. B. Mancill.

Motor Sales & Service Company, Cincinnati, O.; $5000; J. B. Minor, G. B. Jolly, Carl Lehmann, A. Majoewska, W. W. Helmholtz.

Brooklyn Auto Repair Company, Brooklyn, N. Y.; L. N. Vause, H. P. Frese, C. V. Mulligan.

Federal Sales Company, Buffalo, N. Y.; $10,000; C. A. Hahl, J. J. Henry, H. S. Bliss.

Witch City Auto Company, Salem, Mass.; $7000; Edwin Cook, Charles A. Cook, William H. Church.

Standard Limousine Top Company, Portland, Me.; $500,000; William H. Gulliver, Elton H. Thompson, Edward J. Connor, C. F. Tennant.

East Dedham Garage, Inc., East Dedham, Mass.; $5000; Howard H. Bonnemort, Charles J. Bonnemort, Irene M. Bonnemort.

H. T. Rhoades Company, Boston, Mass.; $3000; Harry Bergson, Florence A. Cleary, Howard T. Rhoades.

Todd Rubber Company of Pittsfield, New Haven, Conn.; $2500; E. J. Todd, A. P. Gunn, Albert Wurts.

Barber Auto Service Company, Brooklyn, N. Y.; $10,680; A. S. Barber, Mae Barber.

Hudson & Bergen Automobile Company of New Jersey, Jersey City, N. J.; $137,000; general automobile business; R. E. Fulcher, C. Meller, A. A. Letts.

Model Garage Company, Jersey City, N. J.; $25,000; Joseph Autenrieth, H. Finks.

Providence Taxi-Service Company, Providence, R. I.; $1000; John W. Perry, Charles E. West.

Bemis Car Truck Company, New York City; $150,000; C. A. Mattfield and others.

Auto Efficiency Engineering Company, New York City; $50,000; U. B. Soule, M. A. Dolbeck, Alfred Aram.

Foraker Motor Truck Company, Chicago; $12,000; E. W. Brooks, G. W. Andrews, Paul A. Neuffer.

Lavole Motor, Ltd., Montreal, Can.; $1,000,000; A. J. Lavoie, H. S. Ross, O. F. Shearer and others.

Century Garage Corporation, New York City; $1000; Moses Lampert, A. R. Martin, A. M. Martin.

Lake Shore Auto Cartage Company, Cleveland, O.; $5000; C. M. Handy, Charles Malouf, G. J. Klamm, John Nelisse, L. B. Handy.

MANUFACTURERS.

The Chemical Rubber Company of Western Pennsylvania is the name of a new company organized at Pittsburg, Penn., to manufacture a tire filler. The men behind the concern are: Allen W. Pence and Charles Mesta of Pittsburg, Grant Cummings of Springdale and W. H. Snyder of Beaver. Offices will be established in People's Bank building and a factory erected on Grant boulevard.

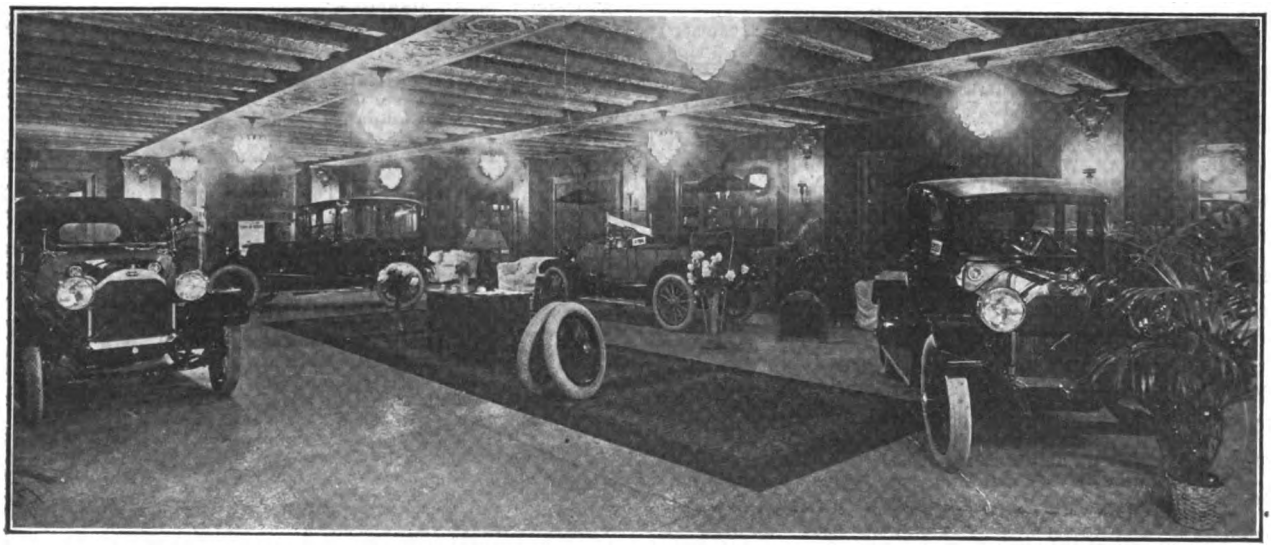
The Metz Automobile Company, Waltham, Mass., maker of Metz cars, has opened temporary salesrooms on the second floor at 1700 Broadway, New York City. E. L. Rieser is manager.

The Gramm Motor Truck Company, Lima, O., maker of Gramm trucks, will enlarge its factory this summer. It is the intention to increase the output to 50 trucks daily.

The Goodyear Tire & Rubber Company, Akron, O., manufacturer of Goodyear tires, has commenced the construction of an elaborate factory building at Seattle, Wash., which will have a floor area of 10,000 square feet.

The Henderson Motor Car Company, Indianapolis, Ind., announced its 1914 line of Henderson cars during the progress of the recent 500-mile race, the new models being displayed in the Hotel Claypole. An accompanying illustration presents the exhibit, which attracted not a little favorable comment from all who saw it.

The Stevens-Duryea Company, Chicopee Falls, Mass., maker of Stevens-Duryea cars, has made arrangements for opening a factory branch at San Francisco, Cal., and a new building at the northeast corner of Van Ness avenue and Geary street has been secured. F. C. Zimmerman is the Pacific Coast manager for the company and the new branch is the result of the recent visit to the West by President Whiteside.



Recent Exhibition of 1914 Henderson Models at Hotel Claypole, Indianapolis, Ind., Made by the Henderson Motor Car Company of That City.

The Buffalo Automobile Spring Company, Buffalo, N. Y., has been incorporated with a capital stock of $10,000 to manufacture automobile springs. Among the incorporators is H. W. Spangler of 359 Huntington street.

The Machine Manufacturing & Engineering Company, Council Bluffs, Ia., maker of automobile supplies and accessories, has plans to enlarge its business.

The Anderson Rolled Gear Company, Cleveland, O., maker of automobile and other gears, is incorporated with a capital of $100,000, and is expected, it is reported, to move to Toledo, O., in the near future. N. Anderson of Cleveland is president, and A. Barker of Toledo is vice president.

George W. Browne, automobile manufacturer, has become incorporated with $45,000 capital at Milwaukee, Wis., and will locate at Broadway and Biddle street.

The Dreadnaught Tire Company, Baltimore, Md., has acquired a plant at Orangeville, Baltimore county, which is located on a four-acre site. It is being rebuilt for tire manufacture.

The Kentucky Wagon Manufacturing Company, Louisville, Ky., recently held its annual meeting. W. O. Harris, Jr., and Stuart E. Duncan were elected directors to succeed C. G. Strater and L. Allen. President W. C. Nones was re-elected, as were also the following directors: S. M. Nones, John Marshall, John C. Hughes, Bernard Bernheim, P. S. Tuley and James Glazebrook.

The Lewis Spring & Axle Company, Jackson, Mich., has absorbed the Lee & Porter Manufacturing Company, Buchanan, Mich.

W. J. Hughey & Son Company, Chicago, is building a factory for the production of motor trucks at Prairie avenue and 33rd street, to cost $100,000.

The Moreland Motor Truck Company, 1701-1731 North Main street, Los Angeles, Cal., is enlarging its plant, the new buildings costing $250,000.

The Hans Motor Equipment Company, La Crosse, Wis., has given contracts for its new $25,000 factory building and expects to begin operations in the near future.

The Velie Motor Vehicle Company, Moline, Ill., has decided to manufacture its commercial vehicles under the direction of a separate company, to be known as the Velie Engineering Company. A new plant has been erected adjoining the present pleasure car shops.

The Gibson Motor Car Company, Alliance, O., maker of Gibson cars, has opened salesrooms at 2519 Oliver building, Pittsburg, Penn.

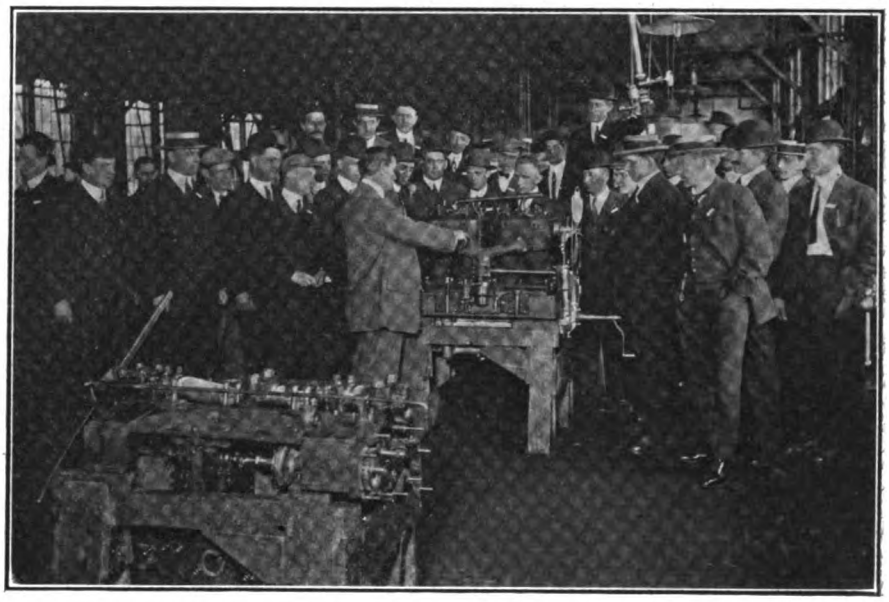
The Hess Spring & Axle Works, Carthage, O., has filed papers with the secretary of state increasing its capital stock from $100,000 to $350,000.

President W. B. Hellen of the Dart Manufacturing Company, Waterloo, Ia., maker of Dart trucks, has arranged for the opening of an agency at Boston. A company has been incorporated under the name of Dart Motor Truck Company and salesrooms have been located at 293 Northampton street.

The Jamesville Manufacturing Company, maker of machine and automobile parts, has moved from Jamesville, N. Y., to Batavia, N. Y.

The Monarch Motor Manufacturing Company, Chicago, is planning the erection of a one-story brick factory at 4634 West Madison street, to cost $16,000.

Teaching drivers of motor trucks to know the abuses of overloading and fast driving was one of the chief purposes of the service convention at the Providence, R. I., factory of the American Locomotive Company recently, which was attended by about 50 men from New York, Chicago, Philadelphia, Pittsburg, Richmond, Newburg, Montreal and the Pacific Coast. George H. Duck, the manager of the general service department, was chairman, and the speakers included General Sales Manager C. Arthur Benjamin, Factory Manager F. P. Nehrbas, Chief Engineer R. A. Vail and J. F. Gfrerer, manager of the dealers' service department. Economy of operation was the object sought by each speaker. Besides hearing the addresses the visitors inspected the factory and witnessed demonstrations of the construction of the machines.



Delegates to the Service Convention Held at the Providence Factory of American Locomotive Company, Listening to Lecture on Alco Truck Motor.

C. A. Swinehart, for several years sales manager of the Swinehart Tire & Rubber Company, Akron, O., maker of Swinehart tires, has become general manager of the Vulcan Rubber Company, Erie, Penn. The company, which has been manufacturing rubber goods and inner tubes, will take up the production of commercial vehicle tires, on a large scale, according to a design made by Mr. Swinehart. The latter and H. F. Burger, also formerly connected with the Swinehart Tire & Rubber Company, have purchased an interest in the Vulcan company, which has been incorporated with $200,000 capital.

Harry A. Lozier, formerly president of the Lozier Motor Car Company, Detroit, maker of Lozier cars, has been elected president of the Motor Patents Company and has taken offices in the Ford building, that city.

The Fort Wayne Auto Works, Fort Wayne, Ind., has moved its equipment and machinery to London, Ont., where the company will operate under the name of the Canadian Standard Motor Works.

The Martin Shock Absorber Company has announced the removal of its factory to its own building at Hooper and Slauson avenues, Los Angeles, Cal.

The International Pneumatic Wheel Company, Cambridge City, Ind., recently incorporated to make a new spring wheel, has moved its machinery to Indianapolis, Ind.

Homer N. Motsinger is now the sole owner of the Motsinger Device Manufacturing Company, Lafayette, Ind., having purchased the holdings of his two partners, B. G. Gilbough, secretary of the company, and H. B. Earle, treasurer.

The Bijur Motor Lighting Company, New York City, has moved its offices from 250 West 54th street to the Factory Terminal building, River Front and 15th street, Hoboken, N. J.

The Auto Sheet Metal Works, Chicago, has moved into larger quarters at 1532 Michigan avenue, where it has 10,000 feet of floor space.

The Cleveland Electric Storage Battery Company, Cleveland, O., has announced the removal of its factory to 410 South Seventh street.

The Prest-O-Lite Company, Indianapolis, Ind., has purchased a site of five acres at South San Francisco, Cal., on which a plant will be erected to care for the needs of the Pacific Coast.

The Marathon Tire & Rubber Company, Cuyahoga Falls, O., is planning additions to give it 2200 more feet of floor space.

The American Gas Engine Company, recently formed at Sheboygan, Wis., has broken ground for a plant to consist of three buildings.

The Gordon Rubber Company, Canton, O., is planning the erection of a new plant to cost $25,000. Two buildings, each two stories high, will be constructed.

The Swarz Electric Company has purchased a factory building and one acre of land opposite the speedway at Indianapolis, Ind., and two additional fireproof factory buildings will be erected.

The Ohio Electric Automobile Company, Toledo, O., is planning an addition to its present factory which will double its capacity. The new building will adjoin the present plant and will be of the same height and dimensions.

The De Tamble Motor Company, Anderson, Ind., is again operating its plant, the settlement proposed by the old owners having been confirmed by the court at Indianapolis.

The Schram Motor Car Company, recently organized at Seattle, Wash., to manufacture automobiles, has leased a site for a plant just outside the city limits.

The Mais Motor Truck Company, Indianapolis, Ind., maker of Mais trucks, has plans under way for the reconstruction of the buildings which were recently damaged by fire.

The Palmer Motor Company, which was recently formed, has begun the construction of a plant at Ecorse, a suburb of Detroit.

The Continental Rubber Works, Erie, Penn., is building an addition to its plant which will afford an increase of 15,000 square feet of floor space.

Thomas R. O'Brien, maker of motor truck bodies, carts, etc., has secured larger quarters at Hubbard avenue and Dale street, Springfield, Mass.

The Mogul Motor Truck Company, Chicago, maker of Mogul trucks, has leased a factory building at Maple avenue and the Wabash railroad, St. Louis, Mo., to which place it will move its plant.

The Motometer Company, New York City, recently closed a contract with E. T. Birdsall, M. E., Detroit, whereby the latter obtains exclusive sale of the Boyce motometer for the State of Michigan.

The Universal Motor Truck Company, Detroit, maker of Universal trucks, has begun work on a new addition to its factory. The plant practically will be doubled and the cost of the new buildings will be $250,000.

The Monitor Automobile Works, Janesville, Wis., has ceased the manufacture of its two-cylinder model and in future will make its four-cylinder trucks exclusively.

The Philadelphia Truck Association, recently formed, has held its first meeting and motor truck matters were discussed. The committee on publicity was authorized to issue a club organ. James Reed, Jr., assistant director of public works, Philadelphia, and E. S. Foljambe were the speakers at the meeting.

The Hendrie Rubber Company, Torrance, Cal., has

Digitized by Google

practically completed its new plant, which cost $100,000, and the Pacific Electric Railway has commenced the construction of a special line to serve the concern.

The International Polish Company, Indianapolis, Ind., manufacturer of the well known Blue Ribbon brands of metal polish, nickel polish, automobile body gloss and radiator leak proof cement, reports that since opening its new factory, Jan. 1, the plant has been taxed to the limit of its capacity in supplying orders.

The La Crosse Rubber Mills Company, La Crosse, Wis., is building a three-story addition to its plant, which will double its capacity.

The K. & F. Manufacturing Company, recently organized by capital at Chicago and Kenosha, Wis., has established a plant on Exchange street, Kenosha, Wis., for the manufacture of metal and glass containers, measuring devices, caps, etc.

The J. W. Brown Manufacturing Company, Columbus, O., maker of automobile lamps, has awarded the contract for a new two-story plant to cost $100,000.

TRADE PERSONALS.

F. O. Bezner, vice president of the Hudson Motor Car Company, Detroit, maker of Hudson cars, has taken up his residence at Paris, France, where he will establish headquarters for the European sales of his company.

Henry L. Hornberger has resigned as Pacific Coast manager of the Oakland Motor Car Company, Pontiac, Mich., and has been succeeded by Arthur Bunker of Seattle, Wash., president of the Bunker Motor Car Company, which handles the Oakland car in the northwest.

W. B. Fewell, who formerly was branch manager for the Olds Motor Works, Lansing, Mich., maker of Oldsmobile cars, at Boston and St. Louis, has been appointed manager of the New York branch of the Oakland Motor Car Company, Pontiac, Mich., maker of Oakland machines. He succeeds George S. Waite, who has become interested in the Grant Motor Car Company, Detroit, recently formed to make the Grant car.

W. H. Flinn has been appointed advertising manager of the International Motor Company, New York City, maker of Saurer, Hewitt and Mack trucks, succeeding R. H. Hutchinson, Jr.

C. E. Stebbins, manager of the Kansas City district of the Maxwell Motor Company selling organization, has been appointed assistant to Charles F. Redden, general sales manager of the company.

Walter Crosby, for more than a year bookkeeper of the Montana garage, Broadway and Arizona streets, Butte, Mont., is now manager, succeeding R. L. Merritt, who will still be connected with the company in the sales department.

Hugh Hughes, the well known racing driver, has become a designer and is employed by Carden Green and J. B. Levy of Broken Arrow, Okla, wealthy oil operators, who are making arrangements to build an automobile factory at Tulsa, Okla.

Robert Perkins, for several years production manager of the Gemmer Manufacturing Company, Detroit, has resigned. He is considered one of the most capable men in the industry, his experience dating to the days of the Liberty Cycle Company, of which he was factory manager.

W. C. Hood, general sales manager of the Westcott Motor Car Company, Richmond, Ind., has been on the Pacific Coast, where he placed numerous agencies.

W. B. Harding, manager of the G & J factory of the United States Tire Company at Indianapolis, Ind., has returned from a European trip.

B. C. Swinehart has been made manager of the Philadelphia branch of the Republic Rubber Company, maker of Republic tires. He was formerly Cleveland manager for the company, in which place he succeeded G. N. Talcott, who has been in charge of the branch in Atlanta, Ga.

E. R. Benson, sales manager of the Studebaker Corporation, has returned from his trip to the Pacific Coast.

Clarence O. Sacks, advertising manager of Gray & Davis, Inc., Boston, Mass., maker of Gray & Davis electrical starting and lighting devices, has returned from his honeymoon trip to Europe.

N. W. Barton has been appointed assistant sales manager of the Olds Motor Works, Lansing, Mich. He has been in charge of the department supervising travelling mechanics and of all details of service to Oldsmobile owners.

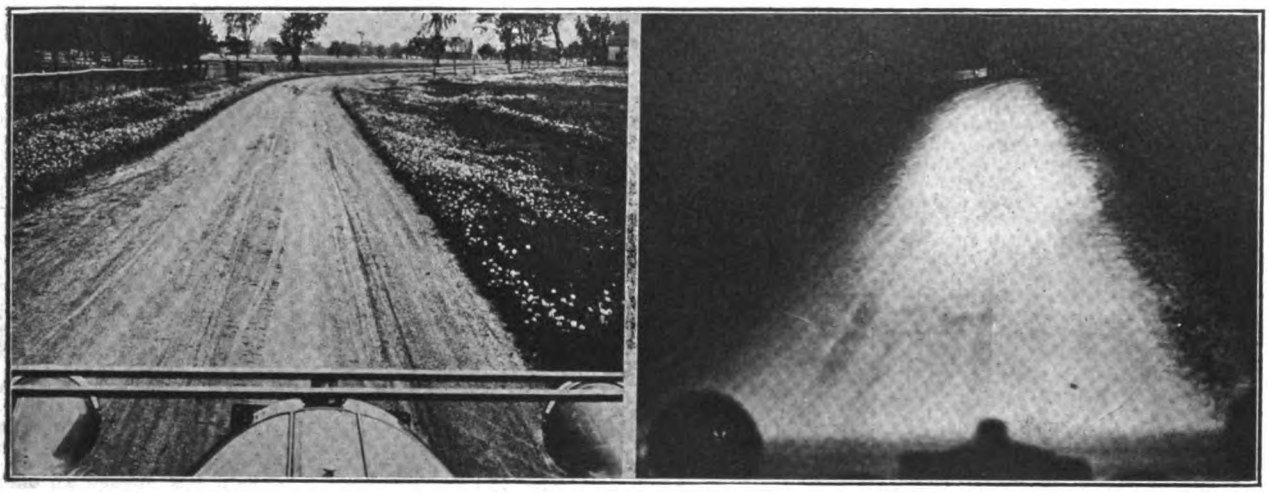
F. B. Norman has become manager of the branch of the Ford Motor Company, Detroit, at Portland, Ore.

H. H. Murden has been appointed factory manager of the Knickerbocker Motor Truck Company, New York City.

J. E. MacDougal has been appointed sales manager of the Pittsburg-Haynes Automobile Company, Pittsburg, Penn., distributor of Haynes cars, made by the Haynes Automobile Company, Kokomo, Ind.

H. H. Thatcher has been appointed treasurer of the Oakland Motor Car Company, Pontiac, Mich., maker of Oakland cars. He will continue to supervise Michigan sales.

The Pierce-Arrow Motor Car Company, Buffalo, N. Y., maker of Pierce-Arrow cars, believes it has solved the problem of securing a maximum of light on the roads at night. The value of the headlight lies in its ability to so project the beam of light that the driver is enabled to see the road ahead as well as to completely illuminate the sides of the roadway. The Pierce-Arrow company has placed its headlights on its new models directly on the mudguards. An accompanying illustration shows the arrangement, and also indicates its value in illuminating curves. The two photographs, which are presented here side by side, were taken at the same spot, the first in the daytime and the other at night. The curve is 750 feet from the car.



Showing Efficiency of Headlights Incorporated with the Mudguards on New Pierce-Arrow Cars, the Two Photographs Being Taken at the Same Point.

E. Wooler has become a designer for the Continental Motor Manufacturing Company, Detroit, maker of Continental motors. He was recently in the designing department of Rolls-Royce, Ltd., England.

R. S. de Milkiewics, who has been connected with the truck department of the Peerless Motor Car Company, Cleveland, O., has resigned to become connected with the American Locomotive Company, with which concern he will be located in the branch at New York City.

T. H. Millington has resigned as general manager of the Detroit plant of the E. G. Budd Manufacturing Company, Philadelphia, Penn.

C. K. Thomas has been appointed manager of the Federal Truck Company, New York City, distributor of Federal trucks, made by the Federal Motor Truck Company, Detroit.

O. W. Klose, district manager of the Maxwell Motor Company, in Minneapolis, Minn., recently resigned to enter business for himself.

George Davis has become manager of the Dominant Motor Car Company, Buffalo, N. Y., agent for Packard trucks, made by the Packard Motor Car Company, Detroit.

R. W. Kerns, formerly general superintendent of the Brecht-Butcher Supply Company, St. Louis, Mo., has joined the sales force of the Missouri Motor Car Company and is now in charge of the truck department.

W. D. Edenburn, a former Indianapolis newspaperman, who has been connected with the automobile industry for some time, has resigned as manager of the newspaper department of the Henderson Motor Car Company, Indianapolis, Ind., maker of Henderson cars, to join the organization of the Apperson Bros. Automobile Company, Kokomo, Ind., maker of Apperson machines. His resignation became effective immediately and he represents the Apperson company on the Indiana-Pacific Coast tour, which started from Indianapolis, July 1, and is scheduled to finish at Los Angeles, Aug. 2. Mr. Edenburn has been one of the most active men in the promotion of the third annual tour of the Indiana Automobile Manufacturers' Association. He was chairman of the special features committee and assistant chairman of the event. The management of the run while en route devolves upon Mr. Edenburn and W. McK. White, advertising manager of the Marion Motor Car Company, maker of Marion cars.

W. D. Edenburn, with Apperson Bros. Automobile Company.

R. K. Johnston, formerly of the Gramm Motor Truck Company, Lima, O., maker of Gramm trucks, has been appointed general manager of the Bowling Green Motor Car Company, Bowling Green, O., manufacturer of the Modern truck.

Charles B. Warren, formerly general manager of the Haynes Automobile Company, Kokomo, Ind., maker of Haynes cars, has become manager of the New York City branch of the General Motors Truck Company, Pontiac, Mich., maker of G. M. C. trucks.

C. H. Harvey has been appointed sales manager of the Eastman Motor Car Company, Philadelphia, Penn., distributor of Wilcox trucks, made by the H. E. Wilcox Motor Car Company, Minneapolis, Minn.

R. C. Chase has resigned from the advertising department of the Packard Motor Car Company, Detroit, maker of Packard trucks and pleasure cars.

The H. S. Houpt Company, New York City, recently formed, recalls old times for those familiar with the history of automobile selling organizations in the earlier days of the industry. Incidentally, it may be remarked that the Harry S. Houpt Company, which was the name selected by Harry S. Houpt in his former venture, was a decidedly important factor in the sales end of the business, not only in New York, but in Philadelphia and Newark, where branches were maintained. Mr. Houpt was president of the old organization and holds the same position with the new. The concern was formed for the purpose of handling Thomas cars and speedily built up a large trade. The New York garage had capacity for 150 machines, which was considered of substantial size in those days. Besides, there was one of the best equipped repair shops to found anywhere. Until recently, Mr. Houpt was sales manager for the American Locomotive Company, but before that he was engaged in the manufacturing end for some time. Associated with him in the new company, which has taken over the Lozier agency, heretofore conducted by the Lozier Motor Company, Detroit, as a factory branch, is L. A. Van Patten, who becomes vice president of the Houpt company. Mr. Van Patten formerly was advertising manager for the American Locomotive Company and as such was in close touch with Mr. Houpt and his methods.

R. E. Frye, who has been identified with the Williams-Frye Sash & Door Company, St. Louis, Mo., where he is well known in business circles, is now general manager and an officer in the Lindsey Motor Car Company of that city.

Frank N. Sim has become assistant advertising manager of the Timken-Detroit Axle Company, Detroit, and the Timken Roller Bearing Company, Canton, O.

Fred Robie, formerly manager of the International Motors Company, Chicago, has resigned.

F. A. Calderwood, formerly assistant manager of the Lozier Motor Company of New England, Boston, has taken a similar position with the Boston branch of the Locomobile Company of America, Bridgeport, Conn., maker of Locomobile cars and trucks.

C. E. Osborne has charge of the new service department of the Speedwell Motor Car Company, Dayton, O., maker of Speedwell cars and trucks, at Van Ness avenue, San Francisco, Cal.

George F. Russell has succeeded Joseph D. Porter as advertising manager of the Garford Company, Elyria, O., maker of Garford trucks and pleasure cars.

W. F. Wittenberg has been appointed manager of the Nevada Manufacturing Company, Nevada, Ia., a concern which has been formed to manufacture motor trucks and motor plows. Mr. Wittenberg was formerly sales manager of the Christian Engineering Company, Milwaukee, Wis.

Charles E. Chadwick, one of the organizers of the Brockway Motor Truck Company, Cortland, N. Y., maker of Brockway trucks, has severed his connection with the company.

Clyde Thompson, formerly manager of the advertising department of the Diamond Rubber Company, Akron, O., maker of Diamond tires, recently taken over by the B. F. Goodrich Company, Akron, maker of Goodrich tires, has resigned.

Charles Fisher, formerly Chicago manager of the Universal Motor Truck Company, Detroit, maker of Universal trucks, has been promoted to become district manager and will handle the Middle West territory. He is succeded at Chicago by C. P. Derr.

Joseph Q. Goudie, who has been manager of the Detroit branch of the Diamond Rubber Company, has been appointed sales manager for the Pennsylvania Rubber Company, Jeannette, Penn. His headquarters will be at Detroit.

George W. Edwards, well known in St. Louis, Mo., has become manager of the St. Louis branch of the General Motors Truck Company, Pontiac, Mich., maker of G. M. C. trucks, with headquarters at 2915 Olive street.

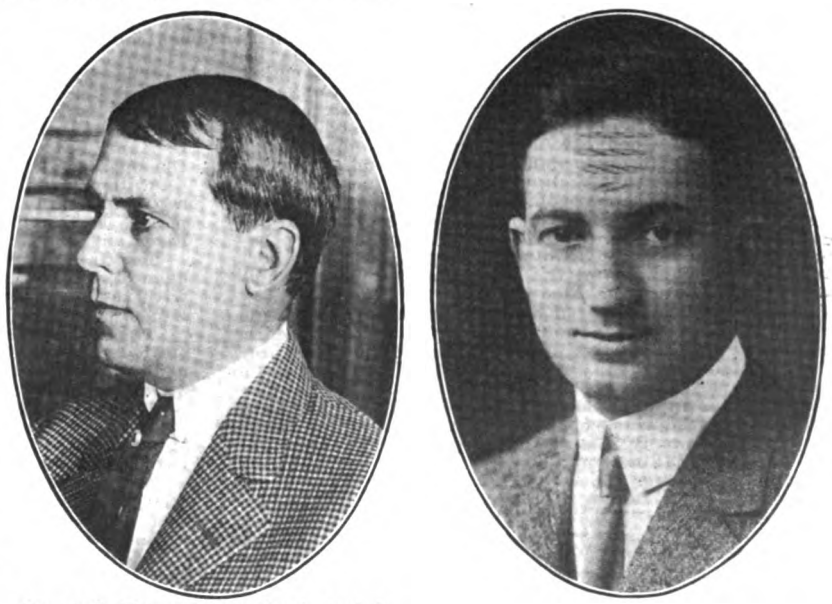
A. C. Weaver, formerly assistant manager of the Lozier Sales Company, Cleveland, O., has been promoted to become general manager. He succeeds A. W. Woodriss, who has taken the Boston agency for the Lozier car.

C. A. Hamilton, formerly vice president of the Lavigne Gear Company, Racine, Wis., has resigned. He is developing some ideas of his own in connection with cyclecars and cyclecar motors.

C. M. Tichenor of Detroit has been appointed special sales engineer and representative of Gray & Davis, Inc., Boston, maker of electric starting and lighting systems. He will cover the Detroit territory.

David Reinoehl, formerly president of Reinoehl, Anderson & Harrison, Inc., Detroit, has opened an office as consulting engineer at 913 Dime Bank building, Detroit.

James G. Cowling, formerly general manager of the Pierce Motor Company, Racine, Wis., and a member of



Harry S. Houpt, President, and L. A. Van Patten, Vice President, H. S. Houpt Company.

Digitized by Google

the S. A. E., has resigned his position to join the organization of the Federal Pressed Steel Company, Milwaukee, Wis., as managing sales director.

F. E. Moskovics, who recently resigned as sales manager of the Remy Electric Company, Anderson, Ind., has purchased an interest in the Jones Electric Starter Company of Chicago, maker of Jesco electric lighting and starting systems. Mr. Moskovics will have charge of sales and at the next directors' meeting will be elected an officer in the company, it is said. He has been in the automobile business 15 years, both as an engineer and sales manager. He designed and built the Yellow Bonnet taxicabs, and also designed the Allen-Kingston car in New York City.

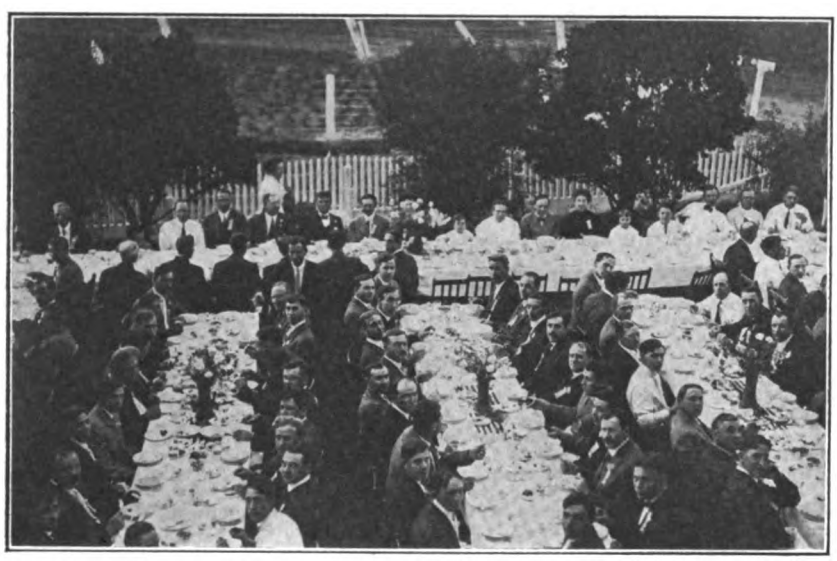
E. L. Atkinson, general manager of the Lange Motor Truck Company, Pittsburg, Penn., is on an extended business trip, during which he will visit Baltimore, Philadelphia, New York and Boston.

E. W. Lyle, formerly connected with the Alden Sampson branch of the United States Motors Company, has recently associated himself with the Adams Bros. Company, Findlay, O., maker of Adams trucks, as superintendent.

M. Lucien Louys, director and manager of Les Fils de Peugeot Freres, manufacturer of the Peugeot racing car which won the sweepstakes prize at Indianapolis, Memorial Day, recently visited Toledo as the guest of the Willys-Overland Company, maker of Overland cars.

Samuel Hill, president of the American Road Builders' Association at the invitation of President George McAneny of the Borough of Manhattan, and President Cyrus C. Miller of the Borough of the Bronx, New York City, recently delivered an illustrated address on "The Highways of the Northwest" before an assemblage of over 50 municipal engineers who are in charge of the highways of Greater New York.

I. W. Penniman, who has been New England sales manager of the Walpole Tire & Rubber Company, maker of Walpole tires, has been made general sales manager of the same concern with offices at 757 Boylston street. He has had wide experience in the tire business, being previously with the Goodyear Tire & Rubber Company and for four years its branch manager at Portland, Me.



Guests of H. S. Firestone at Recent Firestone Foremen's Homestead Dinner.

George H. Duck has resigned as general service manager of the American Locomotive Company. Mr. Duck organized the service department of the company and put it on its present basis, establishing systems that are being followed generally by other concerns. He was formerly branch manager for the Matheson Automobile Company before joining the Alco concern.

F. E. Wilson has severed his connection with the Tone Car Corporation, Indianapolis, Ind. maker of Tone cars, and has joined the sales force of the Marathon Motor Works, Nashville, Tenn., maker of Marathon cars. His headquarters will be at Dallas, Tex.

Production Manager Max Wollering of the Studebaker Corporation, who was reported to have joined the Maxwell Motor Company in a similar capacity, denies the report and states he will not break his long term contract with the Studebaker concern.

NEW CONCERNS.

Thompson & Knox has opened a new modern garage in the Holt building, Marysville, Mo.

The Pierce County Auto Company, Puyallup, Wash., has opened a garage on Stewart street.

P. C. Rodman, Abilene, Kan., has opened a first class garage on Fourth street.

W. S. Lindsey has arranged to open an automobile supply house at Third street and First avenue, St. Petersburg, Fla., where a full line of supplies will be carried.

The Silver Bow Motor Car Company, Anaconda, Mont., has been incorporated and is located on Idaho street.

The Cascade Garage, in the Ellis building, Wenatchee, Wash., has been taken over by T. M. Gibbons, and the name of the establishment has been changed to the Ford garage.

The Century Auto Supply Company, 520 North Broad street, Philadelphia, Penn., has assumed charge of the garage storing department and has taken over the entire building.

H. S. Firestone, president of the Firestone Tire & Rubber Company, Akron, O., recently tendered what was known as the Firestone Foremen's Homestead dinner, to the foremen of the company at the old Firestone family homestead in Columbiana, O. The party made the trip by automobile, 30 cars being needed to take the 145 guests. The guest of honor was Charles S. Whitman, district attorney of New York City and candidate for mayor. Mr. Whitman is a boyhood friend of Mr. Firestone, so the affair was a pleasant reunion in every particular. The route to the old homestead was selected for its scenic values, and Ohio has never before displayed 70 miles of its summer beauties to better advantage.

W. W. Garrison, for two years associated with the advertising department of the Hudson Motor Car Company, Detroit, maker of Hudson cars, has resigned as publicity manager to connect himself with the Nichols-Finn Advertising Company, Chicago. Mr. Garrison for several years was a member of the copy staff of Lord & Thomas Advertising Agency, Chicago. Before that he was engaged in newspaper work in Chicago and is well known throughout the United States as one of the most successful of advertising men.

The Taxi Service Company, Greenfield, Mass., has opened headquarters at the Weldon garage.

The Auto Supply Company, Wharton, Tex., of which George Carpenter was proprietor, has changed hands. T. D. Kemp has purchased the property and he will conduct the business in the future.

Charles Potter, automobile dealer of Wakefield, Kan., has been joined by John Bradbury and the business will be expanded under the partnership. A new modern garage is contemplated and the company will handle Ford and Regal cars.

Digitized by Google

The Mexico Motor Car & Supply Company, Oswego, N. Y., is conducting a general automobile business, making a specialty of first class repair work. The company is agent for Studebaker cars, made by the Studebaker Corporation, Detroit.

The Webb & Taylor Garage, New Berne, N. C., is now open for business and is located on Craven street. General repair work will be carried on in connection with other features of the business. E. S. Webb and Z. V. Taylor, Jr., are the owners.

The C. T. Silver Motor Company, Overland distributor in the New York City district, has established a branch at Red Bank, N. J., on West Front street. A salesroom and repair shop have been installed and a complete line of supplies is carried. The repair shop is thoroughly equipped and the garage is in charge of E. S. Denison.

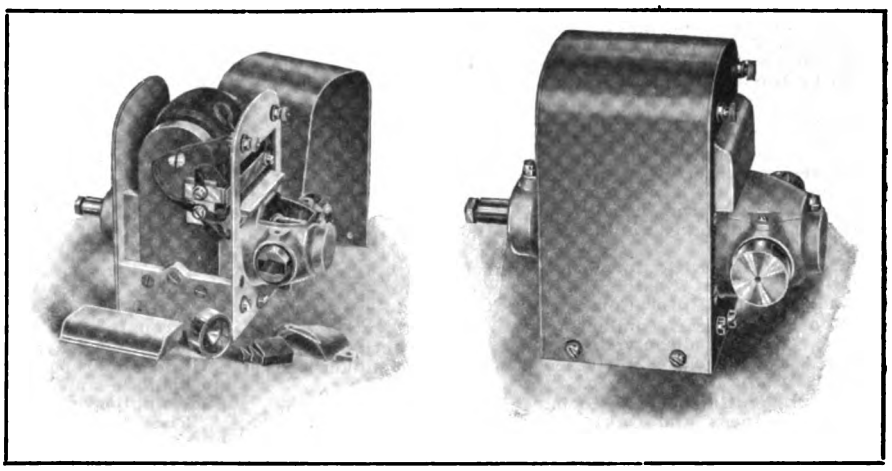
The Economy Auto Company and the Lackawanna Vulcanizing Company, Scranton, Penn., have taken over the entire business of R. A. Ammerman, 519 Linden street, and the business of the new concern, which has been formed by a consolidation of the three firms, will be conducted in future at both places, 223 Wyoming avenue and 519 Linden street. Jacob Nessemer and Russell O'Horo are the new proprietors and are experienced automobile men.

Charles Less has purchased the interest of Eugene A. Freund and A. F. Roemmich in the Modern Auto Repair & Reconstruction Company, St. Louis, Mo., and is continuing the business at 4601 Olive street. William Lohse remains superintendent, and A. R. Solomon secretary of the company.

Forsey & Holland, McRae, Ga., has opened a garage and repair shop under the name of City garage. A line of supplies is carried.

O. E. Woodson, Cottage Grove, Ore., has purchased the Nesmith garage and will make numerous improvements.

The R. C. Wells Manufacturing Company, Fond Du Lac, Wis., maker of the Wells lighting generator, holds that its system operates perfectly at all ratios. The Wells generator is very compact, weighs but 19.5 pounds, and is of the bi-polar type. It supplies current direct to the lamps, the storage battery being utilized as an auxiliary and when the voltage of the dynamo falls below a predetermined value. The control of the current is automatic, being held at a proper value by a magnetic shunt. This device is simple in construction and operation, weakening the current when the output would be too strong or augmenting it when of low value. An automatic magnetic switch is utilized for opening and closing the circuit between the generator and battery, the latter being brought into service at very low car speeds. Among the features emphasized with the Wells are that the cells are properly charged at all times and that, being constructed of high grade material and workmanship, it requires no other attention than an occasional oiling.



Wells Lighting Generator with Cover Removed to Show Magneto Shunt Controlling Output.

I. W. Phillips has purchased the Doline garage on Pine street, Orlando, Fla., and has taken over the agencies for the Reo and Mitchell cars. He has also secured the agency for the Chevrolet car.

T. J. Wilson, San Diego, Cal., has purchased the garage on First street, between Avenues B and C, formerly owned by the Union Title & Trust Company. The consideration is said to be $31,000.

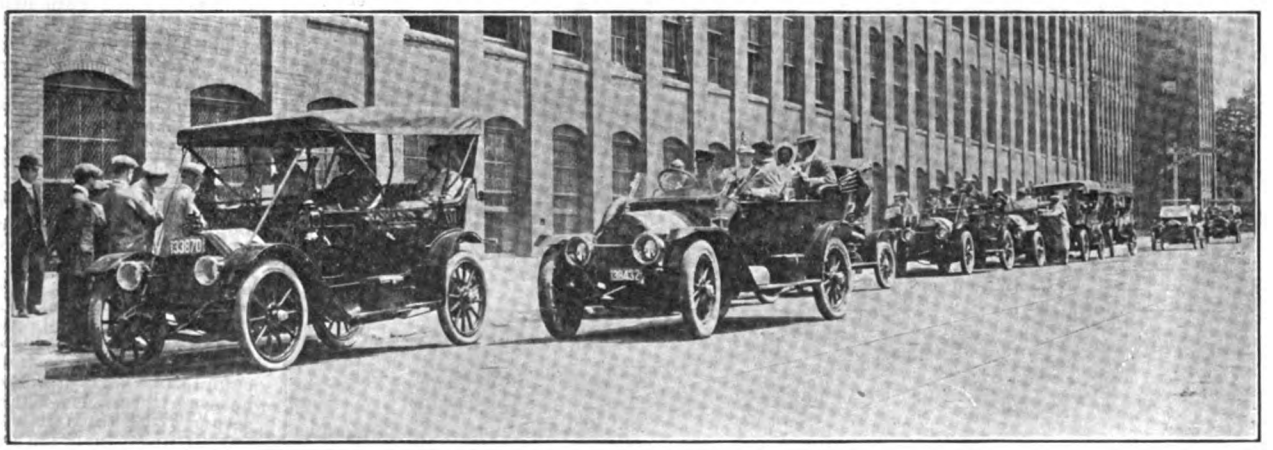
The North Street Realty Company, North Adams, Mass., will erect a modern garage at 501 North street, at a cost of $11,000.

F. W. Marsh & Son, 9 Union street, Winsted, Conn., has plans for a modern garage.

The Automobile Club of Springfield, Mass., recently held its annual run and clambake, which was of more than local interest because of the added feature, in the nature of a fuel economy test. The run itself was over a course covering some 30 miles, with secret controls, the winner of the Fiske cup being the driver who came the nearest to a predetermined schedule. The fortunate driver was Henry Cave, who took the award last year. The showing made by the local Knox machines, made by the Knox Automobile Company, Springfield, was particularly striking, being such as to indicate the relative economy of the larger type of cars. A Knox six-cylinder touring car carrying three people made the highest showing of any of the water-cooled machines, while the eight Knox cars averaged over 16 miles to the gallon, or about 71 miles to the gallon on the 1000-pound basis. An accompanying illustration shows some of the machines that took part in the run.



Cars Taking Part in the Annual Run of the Automobile Club of Springfield in Front of the Knox Automobile Company's Factory.

S. G. Chapman has moved into a new building on Van Ness avenue, near Sutter street, San Francisco, Cal., which in the future will be the permanent headquarters of Hudson and Hupmobile cars on the Pacific Coast. The building is of semi-Grecian architecture and is one of the most modern establishments in that district.

The Republic Motor Company of Massachusetts, New England factory branch for Chevrolet and Little cars, has, in the few months it has engaged in business in Boston, made such rapid strides that it has been forced to secure a large service station in order to care for the owners of its cars. Manager W. C. Sills announces that he has secured a lease of 10,000 square feet in the Shoe and Leather building. The service station will carry a complete line of parts and will be equipped with the most modern machinery in charge of experts.

The H. C. Pogue Company, distributor for Lee tires and jobber in automobile accessories at 218-220 Second avenue, north, Nashville, Tenn., has decided to erect a large building on Broadway to handle this line exclusively. A stock is carried by the company to supply all the southern wholesale and retail trade.

Medbery & Sherman, Ballston Spa, N. Y., has moved its automobile repair business and machine shop to Bath street.

The Dealers' Clearing House, Fresno, Cal., is now located in excellent and roomy quarters at 1820 Mercer street.

The Helterman Garage, Richmond, Va., which has been in course of construction, is now finished and is open for business.

Steckel, Allentown, Penn.; Elm Auto Company, Bridgeport, Conn.; Burlington County Auto Sales Company, Burlington, N. J.; Carthage Auto & Carriage Company, Carthage, Ill.; Clay S. Wolf, Colorado Springs, Col.; Riter & Adams, Forney, Tex.; Baker Bros., Geneva, N. Y.; A. L. Wilson, Greenfield, Mass.; J. E. Winterscheidt, Horton, Kan.; J. B. Flint, Humboldt, Kan.; C. H. Nelson, Pittsfield, Ill.; Allen H. Motes, Scottsville, Kan.; S. M. Rexford, Spring Valley, Minn.; Heck & Cyphus, Sidney, O.; William A. Clark, Stamford, Conn.; J. Lusignan, Stockton, Cal.

The Adams Bros. Company, Findlay, O., maker of Adams trucks, has appointed the following agencies: Holcomb Company, New Haven, Conn.; Fisher & Lambing, Kittanning, Penn.; Charles R. Roehl, Caracas, Venezuela; Cuba Electric Supply Company, Camajuani, Cuba.

Brock's Garage, Trenton, N. J., has taken the agency for the Autocar truck, made by the Autocar Company, Ardmore, Penn.

Rudolf & West, Washington, D. C., automobile accessory dealer, has secured the agency for that territory of Fisk tires, made by the Fisk Rubber Company, Chicopee Falls, Miss.

The Institution of Automobile Engineers of Great Britain, which was represented in this country by 27 members, who were the guests of the Society of Automobile Engineers of this country, has demonstrated that it is a live organization. The members have returned home, declaring the hospitality everywhere met with on their tour through this country was something not soon to be forgotten. President and Mrs. T. B. Browne left the party at Buffalo, N. Y., to return to their home in London by way of the Pacific Coast and the Far East. Secretary Basil H. Joy left the party at Pawtucket, R. I., going immediately to Montreal, from which port he sailed after completing certain business matters. After the return from the trip on Lake Huron, included in which was the midsummer meeting of the Society of Automobile Engineers, the party enjoyed trips through many of the automobile factories of Detroit, Cleveland, O.; Buffalo, N. Y., and other places. At Pawtucket, R. I., the plant of Potter & Johnston Machine Company was visited, as well as the American Locomotive Company's factory at Providence, R. I. After stops in New Haven, Bridgeport and Hartford, Conn., the party returned to New York City, from which place the members sailed for England.

The Keeton Motor Company, Detroit, maker of Keeton cars, has announced the opening of its 1914 season and the following distributors have been appointed: H. A. Dougherty, 1525 Grand avenue, Kansas City, Mo.; John A. Bender Company, 2807 Michigan avenue, Chicago; Lincoln Automobile Company, Lincoln, Neb.; G. N. Jordan, 310 Union Oil building, Los Angeles, Cal.; C. Thompson, Rochester, N. Y.; L. Streuberm, Erie, Penn.; W. B. Doan, 643 Washington avenue, Brookline, Mass.; Davenport Automobile Company, Davenport, Ia.; Southern Motors Company, Jacksonville, Fla.; Usborne & Whitson, Ltd., Woodward avenue, Detroit; Engineers Podrowsky & Feyerabend, Sagorondy 21, St. Petersburg, Russia; J. Azevedo & Cia, Rua dos Ourives, 45, Rio de Janeiro, Brazil.

The Bosch Magneto Company, New York City, announces the following Bosch distributors: Oskamp Auto Supply Company, Race and Seventh streets, Cincinnati, O.; Gus Habich, 142 East Washington street, Indianapolis, Ind.; Kimball-Upson Company, 609-611 K street, Sacramento, Cal. The following Bosch supply stations have also been designated by the company: S. S. Parmalee Company, Second and Poplar streets, Macon, Ga.; Lackawanna Automobile Company, 314 Adams avenue, Scranton, Penn.; Armstrong Auto Company, St. Joseph, Mo.; Electric Manufacturing Company, St. Paul, Minn.; Edwards & Dickey, 13 Vaughan street, Portsmouth, N. H.;

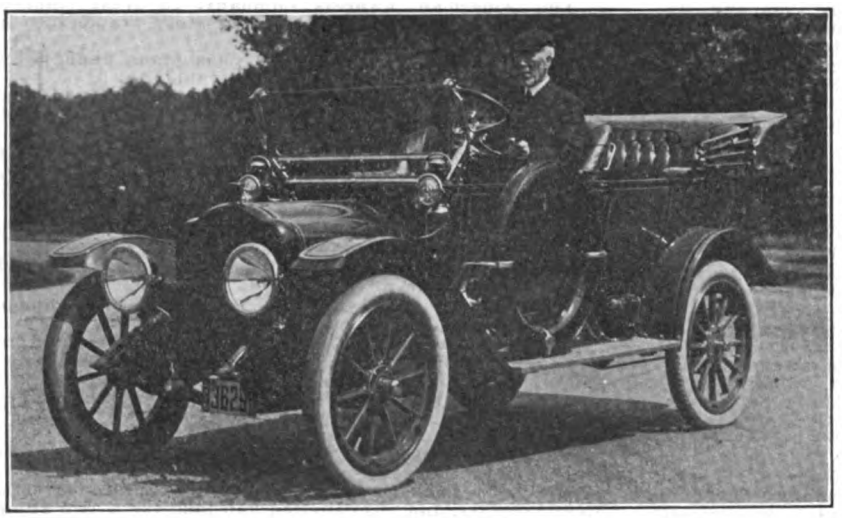
D. D. Walker, Jr., first vice president of the Ely Walker Dry Goods Company, 1520 Washington avenue, St. Louis, Mo., is planning to erect a garage.

R. E. Curtis, Lincoln, Kan., has plans under way for a one-story garage to cost $2500.

Digitized by Google

L. W. Roe, Seattle, Wash., has awarded the contract for the erection of a large garage. An old building will be demolished and the cost of the entire work is $30,000.



A. B. Hambleton, Cleveland, O., 84 Years of Age, at Wheel of White Car.

A. B. Hambleton, who lives at Shaker Heights, Cleveland, O., is 84 years old and drives a new 30 horsepower White car, made by the White Company of that city. Not many men of 80 years or more have the inclination to drive motor cars, to say nothing of planning and accomplishing long distance tours, but Mr. Hambleton is a long distance tourist of some note. He intends to pilot his machine on a tour to New York City and Cape Cod this summer. He has been driving for eight years and in that period he has made a number of journeys that would be notable even if made by a Glidden enthusiast. A run to New York and back is a mere incident in his motoring career, while he regards a trip to Buffalo and return with no more concern than the routine of driving down town. He takes care of his own car for the amusement he derives therefrom. In his eight years' experience Mr. Hambleton has suffered but one accident, which occurred while cranking, resulting in a broken wrist. In purchasing a White car he did so because he was impressed with the simplicity and efficiency of its electrical system of starting and lighting. Although he is now retired he has had wide experience along mechanical lines, having been instrumental in building up the Globe Iron Works, now the American Shipbuilding Company, which makes engines, among other things.

Charles A. Cheatham, Jacksonville, Fla., has plans for the building of a two-story service station at a cost of $12,000.

W. Lister, Chicago, has given the contract to T. D. Foster & Son, 10 South La Salle street, Chicago, for a one-story garage to cost $12,000.

L. A. Young, 93 Rhode Island avenue, Highland Park, Mich., has received bids for the erection of a private garage.

Dr. W. F. Metcalf, 636 Woodward avenue, Detroit, has plans under way for a private garage.

E. A. Mairs, Mendota, Ill., has given the contract for a one-story garage to cost $10,000.

Charles W. Denny has completed plans for a brick and reinforced concrete commercial garage building at 35th and Chestnut streets, Philadelphia, Penn.

Stacey Reeves & Sons is estimating on plans for a stone garage to be erected at Chestnut Hill, Penn., for A. C. Harrison.

Harry Alger has awarded the contract for a one-story brick garage to be built at 20th and Atlantic streets, Philadelphia, Penn.

W. G. Rose, 1490 East 108th street, Cleveland, O., has given the contract for the building of a modern garage.

F. K. Moore, 826 Hicker building, Cleveland, O., has awarded the contract to E. J. Andrews, 1575 East 115th street, for a 1.5-story garage.

F. M. Solar, 1741 Westwood avenue, Cincinnati, O., has awarded the contract for the building of a two-story garage.

Motorists in New York City are fast learning to appreciate the beauties of a drive through Westchester county in the spring and summer. There are few sections in the immediate vicinity of the metropolis which offer such pleasant country drives. An accompanying illustration presents a party of women and children on a day's outing in a Reo the Fifth, made by the Reo Motor Car Company, Lansing, Mich., and sold through R. M. Owen & Co., 19 West 62nd street, New York City. The photograph from which this reproduction was made was taken early in June, when the dogwoods, oaks, maples and balsams of this region were at their best, and the party had little trouble in bringing back numerous souvenirs of the trip. It also indicates the possibilities for many a pleasant afternoon ramble through the country or into the woods, over little frequented roads.

Louis P. Mooers, who first became prominent as a designer and factory man many years ago with the Peerless Motor Car Company, Cleveland, O., maker of Peerless cars and trucks, and who recently has been with the Herschell-Spillman Engine Company of Tonawanda, N. Y., has joined the organization of the Keeton Motor Company, Detroit, maker of Keeton machines. He will be engineer and have charge of production.

Dr. Everett Jones, 1658 Beacon street, Boston, Mass., has awarded the contract for the erection of a two-story garage to be 24 by 39 feet.

The William Grugler Company, Philadelphia, is estimating on plans and specifications for a garage to be built at St. Martin's, Penn., for Walter Dilks.

M. J. Gleason, 810 Hippodrome building, East Cleveland, O., contemplates building a garage.

C. E. Hutchinson, Fairmount, W. Va., has plans under way for a three-story garage, stable and servants' quarters, to cost $5000.

Jacob Meurer, 266 Lincoln place, Brooklyn, N. Y., has plans being prepared for a one-story garage to cost $6000 and to be built at Port Jefferson, L. I.

E. L. Jackson, Herkimer, N. Y., is planning to build a one-story garage to be 14 by 20 feet.

W. J. Van Keuren, 128 North La Salle street, Chicago, has prepared plans for a one-story garage, 23 by 16 feet.

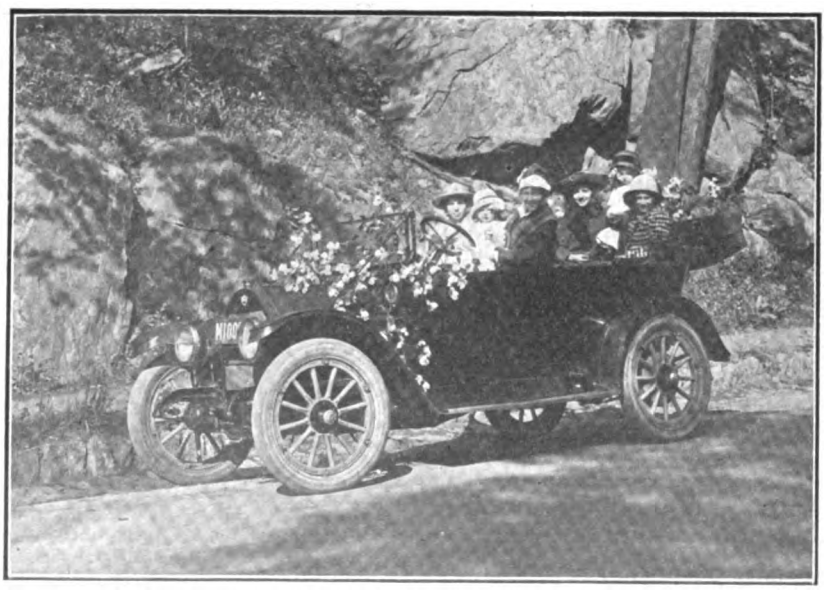
J. N. Dondelinger, St. Peter, Minn., has received bids for the erection of a one-story garage, 50 by 70 feet, to cost $6000.

H. P. Goertz, Mountain Lake, Minn., has invited bids for the building of a one-story garage to cost $4000.

Block Bros., Sixth and Felix streets, St. Joseph, Mo., has completed plans for a 1.5-story garage, 25 by 28 feet.

John McDevitt, Spokane, Wash., has called for tenders for the erection of a one-story garage, 50 by 156 feet, to cost $10,000.

W. F. Brand, 1218 North Vermillion street, Danville, Ill., has awarded the contract for the erection of a one-story garage. H. A. Linne, 246 West Main street, will lease the building when it is completed.



Party of Women and Children Enjoying a Day in Westchester County with a Reo the Fifth.

Duhring, Okie & Ziegler, Philadelphia, is preparing plans and specifications for a garage, stable and barn for W. L. Austin, to be erected at Villanova, Penn.

Entered as second class matter Dec. 30, 1911, at the postoffice at Pawtucket, R. I., under the Act of March 3, 1879.

BUILDING SUCCESS.

There is perhaps nothing more offensive to the enterprising business man than the attitude of hard luck and business depression assumed by some to account for their lack of success. One garage proprietor was heard recently to declare that the automobile business was the very worst in which a man could engage. Argument would have been fruitless in his case and none was attempted. However, his presence in any gathering was sufficient to cast a pall of gloom upon it.

Doubtless, investigation would have revealed the reasons for his failure to progress. Had he taken the time that he spent in berating the industry in general, to build up his business and study the details with a view to strengthening any deficiencies his story might have had a different tone. But he is of a type that would be unsuccessful in any line of endeavor he might elect to follow.

One cannot be impressed too strongly by the fact that a man takes out of his business exactly that which he puts into it. The business man who is slothful and slipshod; who is mentally lazy, cannot expect to travel far on the road to prosperity. The one who is alert every minute and who takes time to carefully study the problems confronting him, is bound to reap the rewards of his industry. The history of the lives of conspicuously successful men proves that nothing can be gained without constant hard work, both mentally and physically.

USING PROPER SIGNS.

Considerable has been said relative to the utilization of display windows and the necessity for keeping them attractive by showing seasonable and timely goods, involving a frequent change in adornment designed to make the windows interesting to passers-by. In calling attention to this the question of proper signs has perhaps been neglected. There are other factors to be considered aside from attractive and artistic signs, and perhaps the most important is in the matter of size.

It has been noticed that many garages and service stations display signs which, while neat, are rather small. It is undoubtedly a fact that a large percentage of the public is short sighted, although this may not have received any material consideration. Recently a manufacturer who was about to install a sign on his factory took this into account and his experience may well be imitated by garagemen.

Proceeding on the basis that hundreds of people cannot read ordinary signs from across the street, it is well to test the signs to be erected. One man about to place a new one above his establishment, selected the person with the most defective vision that he knew, to stand on the opposite side of the street while various sizes of letters were displayed. The one which he read the easiest was selected. The cost of installing a larger sign is not excessive, especially when one considers the greater number of readers secured, including the large number of nearsighted people.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC.

Of **The Accessory and Garage Journal** Published **Monthly** at **Pawtucket, Rhode Island,** required by the act of August 24, 1912.

NOTE—This statement is to be made in duplicate, both copies to be delivered by the publisher to the postmaster, who will send one copy to the Third Assistant Postmaster General (Division of Classification), Washington, D. C., and retain the other in the files of the postoffice.

Name of	Postoffice Address
Editor, WILLIAM H. BLACK	Pawtucket, R. I.
Managing Editor, CARL A. FRENCH	Pawtucket, R. I.
Business Manager, WILLIAM H. BLACK	Pawtucket, R. I.
Publisher, The Automobile Journal Publishing Co.	Pawtucket, R. I.
WILLIAM H. & DAVID O. BLACK, JR.	Pawtucket, R. I.

Owners: (If a corporation, give names and addresses of stockholders holding 1 per cent. or more of total amount of stock.)
None.

Known bondholders, mortgagees and other security holders, holding 1 per cent. or more of total amount of bonds, mortgages or other securities:
None.

WILLIAM H. BLACK, Editor.

Sworn to and filed with Postmaster July 11, 1913.

ARTHUR H. CAPWELL,
Notary Public.
My commission expires June 30, 1914.

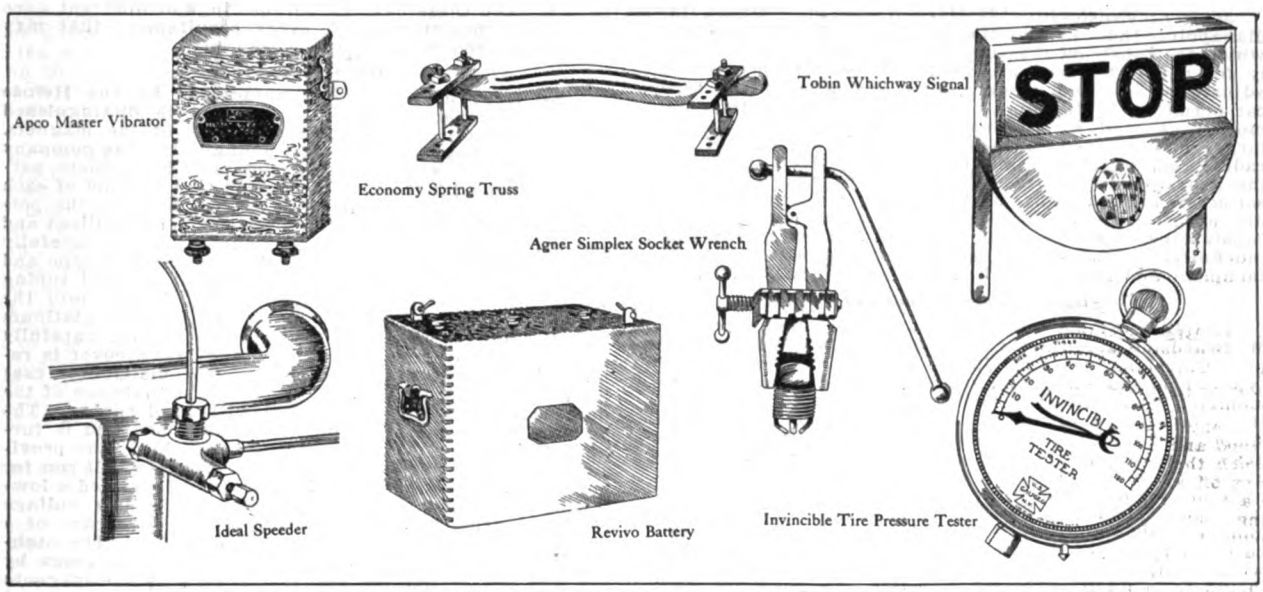
DESIRABLE ACCESSORIES FOR THE DEALER.

Apco Master Vibrator No. 3.

The Auto Parts Company, Providence, R. I., manufacturer of Ford specialties, has augmented its extensive list by a new master vibrator termed the No. 3. The company has had considerable experience with master vibrators, having previously marketed two designs, and states that the new instrument is superior in every respect to former models in that it is not only more compact, but produces a hotter spark with less consumption of current. The last named feature will appeal to Ford owners whose cars are fitted with electric lighting as a better light is obtained at low speeds. The new master vibrator is but 1.5 inches thick, 3.5 wide and five high, dimensions permitting of installation under the hood if desired, thereby eliminating possible obstructions from the dash. The case is of mahogany, highly finished, and the removable cover is accurately fitted, excluding dirt and moisture. All exterior components, such as locking parts, terminals, etc., are heavily nickel plated. The adjusting screw of the vibrator includes a special locking device, and the contact points are unusually large, assuring long life with minimum care. Particular attention has been paid to the windings and these are designed to withstand the high voltages generated by the flywheel magneto. Although constructed especially for model T Ford automobiles the master vibrator may be utilized with any coil system of ignition where the source of current is a battery or a low-tension magneto. Not only does it synchronize the spark, making for more power and flexibility, but starting is made easy, as each cylinder is assured a hot spark. Although the Apco vibrator is the lowest priced instrument marketed, the best of material and workmanship are incorporated, and it is guaranteed.



Economy Spring Truss.

The Economy spring truss is manufactured by J. C. Moore & Co., Racine, Wis., and is designed to be carried in the car for emergency when a spring breaks. It is slightly arched in the centre and carries a clamp and bolts at each end, the former being provided with a number of openings to fit different sized springs. In practise the centre of the truss is placed over the break and the bolts of the clamps tightened.

Tobin Whichway Signal.

A large number of rear-end collisions take place because of the inability of the operator of the leading car to notify the approaching vehicle when a stop is to be made. This is especially true in the evening when driving in congested traffic. The Tobin Whichway Signal Company, 50 Walker street, New York City, is marketing the Tobin Whichway signal, which presents practical features in that whenever the machine is slowed down or stopped the word "Stop" is automatically illuminated. It is a combination license tag holder and rear light operated by electricity, and includes the usual red semaphore. The word "Stop" is ground in red glass and the lamp is made of brass reinforced with a heavy piece of steel. Inside the lamp, which is constructed to withstand severe service, are two electric bulbs, one illuminating the semaphore and number plate continuously, and the other the signal. Control of the lighter is by an automatic switch which may be attached to either the clutch or brake.

Ideal Speeder.

The high price of gasoline has resulted in the marketing of a number of devices for controlling the mixture by introducing auxiliary air into the intake manifold. One of this type is the Ideal speeder, marketed by the Interstate Auto Accessory Company, 2124 East Washington street, Indianapolis, Ind. It comprises a valve device which is screwed into the intake manifold and the opening is controlled by a dash adjustment. Heated air is utilized to break up any particles of raw gasoline as well as to correct the mixture, a tube being placed in proximity to the exhaust pipe. The speeder is constructed to be utilized in combination with a primer which is mounted on the dash and manually operated.

Revivo Storage Battery.

The Revivo storage battery is the product of the Cook Railway Signal Company, Denver, Col., and differs from the usual types of lead batteries in that it is a dry member, no fluids being utilized for an electrolyte. It is claimed by the maker that the battery may be entirely discharged and that recharging will bring it back to its initial efficiency. It is charged in the same manner as wet batteries and it is maintained that overcharging is not injurious. It is made in several sizes and capacities.

Agner Simplex Socket Wrench.

The R. C. Agner Company, Burlington, Wis., is manufacturing the Agner Simplex adjustable socket wrench, which presents interesting features in that it may be utilized for a number of purposes. It is especially adapted for removing and replacing spark plugs, having as it does a pair of movable jaws which are locked by a small clamp. It may also be utilized on square or hexagonal nuts and bolts, or as a tap wrench. Another feature of the device is that it can be employed as a small hand vise. It is constructed of high grade material.

Invincible Tire Pressure Tester.

Lack of proper inflation is the greatest abuse of tires and to secure maximum efficiency from the casings the air pressure should be tested from time to time. The United States Gauge Company, 67 Wall street, New York City, is marketing the Invincible tire pressure tester, which is a self-recording instrument and one easily operated. It is similar in size and shape to a watch and may be carried easily in the pocket if desired. The dial is calibrated, registering in pounds from one to 120, and the proper inflation values for different sized casings are included. When taking a reading the hand remains at the maximum pressure until released by pressing a button. This is of convenience when inflating tires at night as the instrument can be carried to the nearest lamp and read.

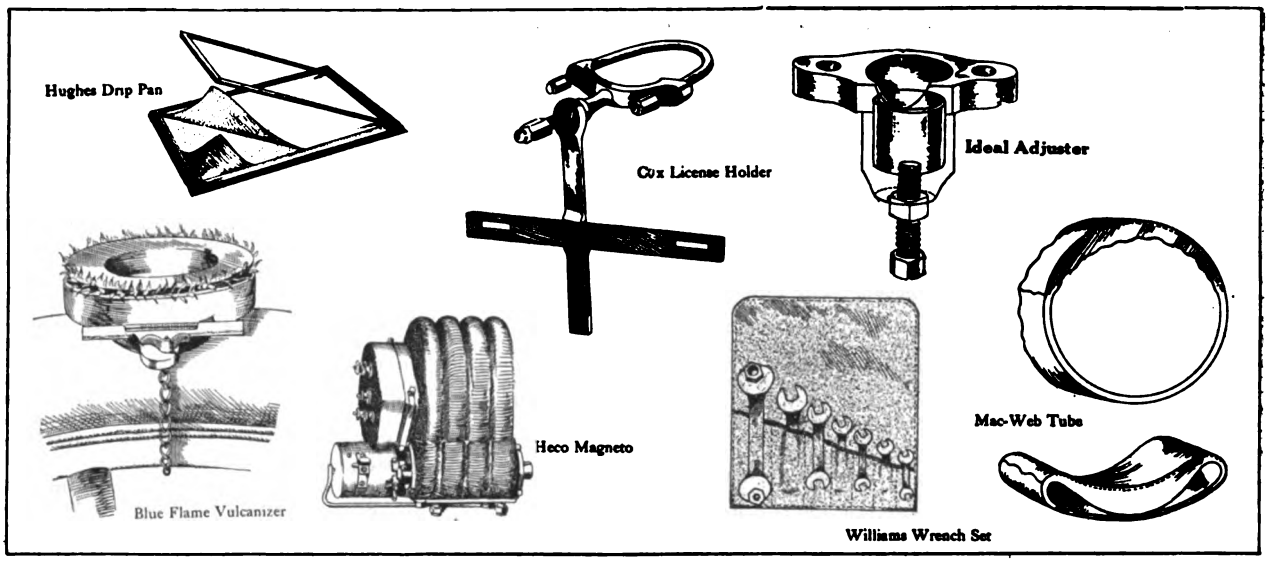
Hughes Drip Pan.

The Foss-Hughes Company, Philadelphia, is marketing the Hughes drip pan, which was designed by A. E. Hughes for service in the salesrooms of the concern. It differs from the conventional pans in that an oiled paper is utilized to catch any lubricant that may drip from the motor, etc. The invention comprises a number of individual sheets of paper formed into a pad and held in a wooden frame by an iron member. Upon a sheet becoming soiled it is removed, exposing a clean one. It is especially designed for service in salesrooms, although equally applicable to the private garage.

Cox License Number Holder.

The Cox Brass Manufacturing Company, Albany, N. Y., is marketing what is known as the bracket A, a license number plate holder, arranged to retain two tags if desired, as when travelling in two states. The plate may be attached to either side of the front bracket,

Digitized by Google



which by removing a nut on the top of the shank can be reversed easily. The holder is made of brass.

Ideal Ford Adjusters.

John A. Vansickle, 2122 East Washington street, Indianapolis, Ind., is manufacturing the Ideal adjusters, which are constructed in two sizes and designed especially for model T Ford automobiles. They are practically adjustable ball and socket joints and when fitted to a car permit of taking up all play, thereby preventing lost motion as well as eliminating annoying rattles. The larger size is used for adjusting the front end of the radius rod, while the smaller is employed on the steering gear connecting rod. The device is provided with a set screw and lock nut and by turning the former a very fine adjustment may be made. The Ideal adjusters are constructed of a high grade material and are guaranteed indefinitely. They do not require any special tool for attachment and may be applied by the most inexperienced.

Blue Flame Vulcanizer.

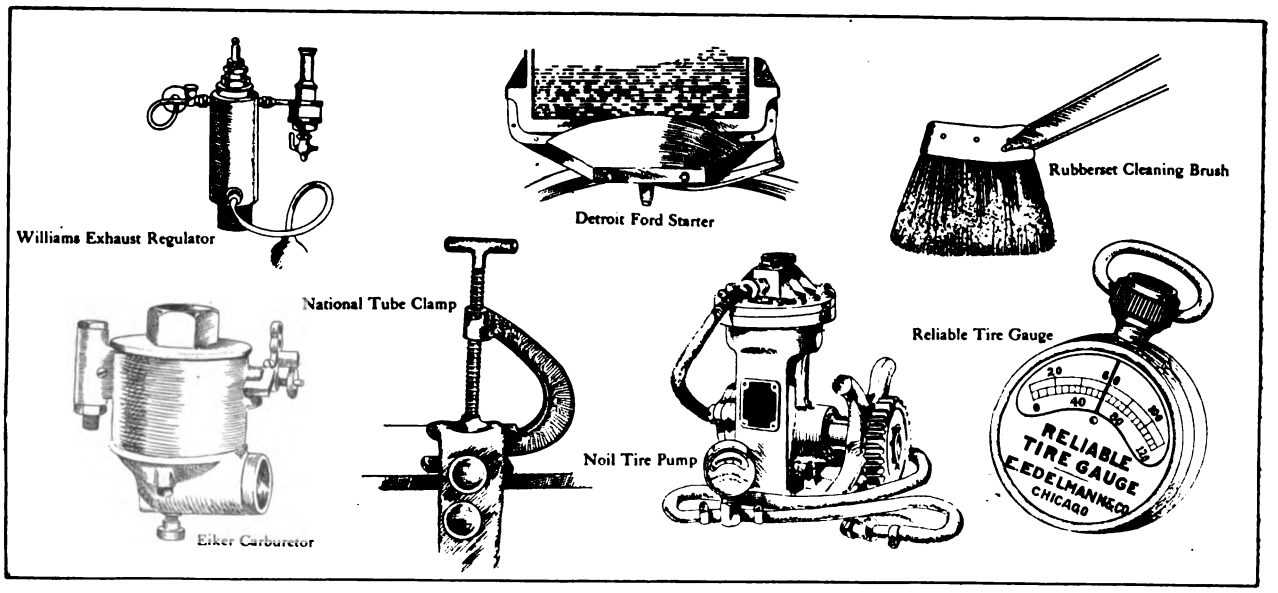
The Blue Flame vulcanizer is the product of the C. M. Beardsley Manufacturing Company, 1911 Euclid avenue, Cleveland, O., and differs from the conventional types of portable devices burning gasoline in that a thermometer is incorporated, enabling the operator to control the temperature of the heat. The vulcanizer is cup shaped and the fuel receptacle is provided with a wick to absorb the greater part of gasoline which when ignited gives off a blue, smokeless flame. Control of the heat is by a cover holding the temperature to the proper vulcanizing point, which is noted by the mercury in the thermometer. The vulcanizer is constructed in two parts, secured together by thumb screws, and is also equipped with a chain for vulcanizing tires on rims. The outfit includes, in addition to the vulcanizer, a specially prepared quick curing cement and rubber.

Williams Wrench Set.

The Waite Auto Supply Company, Providence, R. I., is marketing the Williams wrench set, which is made in two numbers, eight and nine respectively, these differing only in that a spark plug wrench is omitted with the smaller numbered outfit. The wrenches are drop forged and are designed to fit bolts and cap screws of varying standard measurements. There are seven wrenches to each set and these have milled openings of different sizes and are sufficient to meet every requirement that may be encountered in motor car work.

Heco Magneto.

The Heco magneto is manufactured by the Heinze Electric Company, Lowell, Mass., and is distinguished easily from other makes by the shape of the magnets, these being round instead of rectangular. The company maintains that the round magnet provides a more perfect contact with the pole pieces and that the end of each magnet is ground and fitted to reamed holes in the pole members. The best tungsten magnet steel is utilized and the armature is of high grade magnetic iron, carefully annealed. The bearings are of the annular ball type and the make and break case is constructed of steel tubing with fibre insulation, the latter being shrunk onto the outside. The points are ample in size, of platinum iridium, and the cam is chrome nickel steel, carefully ground and hardened. The make and break cover is removable without the use of tools. The distributor case is of hard vulcanized rubber and the terminals are of the detachable type and are covered with hard rubber. The advance lever is located on the breaker box and is furnished either on the right or left hand side. The provision for lubrication is such that the magneto will run for months without attention. The magneto is termed a low-tension instrument because it produces a low voltage from the armature, which is stepped up by means of a coil having primary and secondary windings. The high-tension current is distributed to the different plugs by the magneto. The dash coil furnished with the magneto is of mahogany, nicely finished, and the coil is equipped with a small kick switch and push button for starting under compression. A coil for mounting under the hood is also manufactured. When the independent dual ignition system is required, a four-cylinder coil is supplied, it having a switch so that either batteries or a magneto



Digitized by Google

may be utilized independently or together. The Heco is constructed for one, two, four and six-cylinder motors. Owing to the special method of winding the secondaries the product of the company is guaranteed against burning out or breaking down.

Mac-Web Pneumatic Tube.

The Mac-Web pneumatic inner tube is manufactured by the Webster-Macdonnell Company, Haverhill, Mass., and it is held that it is not only puncture proof, but that it provides all the advantages of the conventional types of tubes. It is constructed with a strip of fabric running its entire length and a thickness of rubber over the fabric. When removed from the mandrel it is turned inside out and spliced. When punctured it is stated that the rubber tread will compress, sealing the opening.

Rubberset Cleaning Brush.

The Rubberset Company, Newark, N. J., is manufacturing a brush called Rubberset, which is made especially for removing oils, greases and dirt from the power plant and other components of the motor car. The brush proper is hatchet shaped and the bristles are extra stiff, making it possible to displace hard deposits. The bristles are gripped in hard vulcanized rubber.

Williams Exhaust Pressure Regulator.

The D. T. Williams Valve Company, Cincinnati, O., is manufacturing the Williams exhaust pressure regulator, which is designed for use on cars equipped with pressure fuel feed systems. Its function is to catch all dirt, moisture, etc., and to cool the exhaust gas before the latter passes to the tank. The device is provided with an adjustable valve which relieves the system of any excess pressure and assures a uniform feed at all times. The regulator is attached to the dash under the hood in a vertical position and the gas is led to it by a tube. The gas enters the regulator through a lower connection, passes upward, then downward over a series of ribs inside the casing, and all foreign elements are separated, falling to the bottom cap, which is removable. The exhaust in its course passes upward through a very fine mesh screen, where it is again filtered.

Detroit Ford Starter.

The Detroit Mechanical Starter Company, Detroit, is manufacturing a mechanical motor starter for model T Ford cars. It is operated from the seat by a nickeled lever located beside the emergency brake member, the former being connected with a sector and pinion gear just in front of the dash. The starter mechanism proper replaces the usual crank and does not detract from the appearance of the machine, it projecting but six inches. When the lever is moved connection is made between the crankshaft and a shaft of the starter, and a further movement of the hand lever turns over the motor by the application of considerable leverage through a gearing. The device weighs but 20 pounds and not only is it easily installed, but it is claimed that but little effort is required to crank the motor.

Elker Carburetor.

The Elker carburetor, manufactured by the Elker Carburetor Company, 1790 Broadway, New York City, differs from the conventional types of vaporizers in that the spray nozzle is located in the middle of the throttle disc and a tapered adjustable needle moves backward and forward, automatically increasing or decreasing the supply of fuel with the opening and closing respectively of the throttle. The maker holds that the construction eliminates the necessity of a venturi tube or extra jets. It has but one air inlet, the air passing upward across the spray nozzle, and as the latter is located in the centre of the mixing chamber it is pointed out that its efficiency is not affected by grades, etc. It is also stated that water and sediment in the fuel cannot clog the spraying nozzle, as the inlet port of the feed pipe is .5 inch below the level of the gasoline. The base, which includes the auxiliary air valve, air intake and hot air connection, adapts itself to four different positions making for convenience in installation. There are but two adjustments, the fuel and air, and it is said that the carburetor is set easily and is applicable to all types of motors. Easy starting qualities, economy of fuel and flexibility are emphasized with the Elker.

National Tube Patching Clamp.

The National Cement & Rubber Company, Toledo, O., is marketing an inner tube patching clamp which is stated to mend a puncture in four minutes at a slight cost. The clamp requires no heat, acid, etc., as it welds the self-curing rubber cement to the tube by the cold process. The equipment includes in addition to the clamp which makes a neat repair, a can of self-curing rubber cement.

Reliable Tire Gauge.

E. Edelmann & Co., 225 West Illinois street, Chicago, is marketing the Reliable tire gauge, which is very compact and in watch form. It registers the air pressure from zero to 120 pounds and is provided with an indicator hand which stops when the maximum pressure is registered. The hand can be reset to zero.

Taylor Noil Tire Pump.

The Taylor Manufacturing Company, box 485, Chicago, is marketing the Noil pump, so named because all lubricant or oily vapors are eliminated, nothing but pure, fresh air being forced to the shoe. It is a mechanical pump of the stationary type and is secured to the power plant of the car by a simple little bracket, this and the necessary gears being supplied as regular equipment and to meet the requirements of installation. The pump works on the plunger-diaphragm principle and the air chamber is independent of the crankcase, being separated from it by an air-tight rubber diaphragm. The pump is but 7.5 inches high, weighs but 6.5 pounds and is constructed of aluminum and bronze. It is held it will deliver from 90 to 150 pounds of air when operated at low speed on the average motor and that it may be fitted in from 15 to 40 minutes, depending on the design of the power plant. The equipment includes suitable length of hose and pressure gauge.

NEW PUBLICATIONS RECEIVED.

Luther's Dimo-Grit Grinders, catalogue No. 29, general information on abrasives. Luther Grinder Manufacturing Company, Milwaukee, Wis.

Universal Garage Equipment, dealing with turntables, their construction, installation and operation. Canton Foundry & Machine Company, Canton, O.

Heinze Low-Tension Magneto, special triple system for two-cylinder, four-cycle opposed motors. Heinze Electric Company, Lowell, Mass.

Arizona Tour Book—Compiled and published by Harry Locke for the Arizona Good Roads Association, Prescott, Ariz. Contains 200 pages of detailed information concerning road conditions, touring maps, routings, etc., covering the state. Fully illustrated. Price $2.

The Ideal Tour—Compiled and published by Almon C. Judd, The Elton, Waterbury, Conn. Illustrated routings for the so-called Ideal Tour of New England, occupying 11 days, with connection from the West and South, fully revised and brought up-to-date. Mailed free upon request.

Pastime Journeys for Electric Automobiles—Published for the Electric Motor Car Club of Boston by F. D. Stidham, 138 Pearl street, Boston. Contains a series of routes with Boston as a centre, practical for electric automobiles, with charging stations in the various cities indicated.

Dayton, a Story of the Great Flood—A brief but interesting history of the recent flood, comprising 32 pages, fully illustrated with photographic reproductions, published by the Dayton Engineering Laboratories Company, maker of Delco systems. The booklet is printed by the Franklin Press, Detroit.

Maine Automobile Road Book, published by the Maine Automobile Association, touring information bureau, 12 Monument square, Portland, Me. It contains routings compiled by pathfinding cars of the association, covering about 3000 miles in Maine and some 100 miles in New Hampshire. Handsomely illustrated. Copies may be had free at request made to the above address.

Gas Engines and Producers—Comprises three parts, the first two being devoted to gas and oil engines, by Lionel S. Marks, S. B., M. M. E., and the last taking up gas producers, by Samuel S. Wyer, M. E. A treatise on the modern development of the internal combustion motor and of efficient methods of fuel economy and power production. Fully illustrated. Published by American School of Correspondence, Chicago. Price, $1.

Good Roads Year Book—Published by the American Highway Association, Colorado building, Washington, D. C.; from the Waverley Press, Williams & Wilkins Company, Baltimore,; edited by J. E. Pennybacker, Jr. An interesting compilation, containing the history of road building and reports of work accomplished and contemplated in the various states. The subject is treated exhaustively and the reports are authoritative. Comprises 548 pages. Price, $1.

Topographical Maps—The United States Geological Survey, Washington, D. C., is issuing topographical maps for motorists, these being of a size suitable for carrying in the car at all times. They not only give the location of all towns, villages and hamlets and all the roads covering each district, but by their use the motorist is able to tell at a glance whether the road will be level or rolling, steep or hilly, etc. Those desiring information concerning the maps should make application for descriptive indices, designating the states covered by the inquiry. Price, 10 cents each.

Electric Vehicles—Published by the Electricity Magazine Corporation, Monadnock building, Chicago, now incorporated with Ignition. The May number contains the following articles of special interest: "The Electric Vehicle Association of America," S. F. McIntyre; "Co-Operation in Electrical Vehicle Progress," Arthur Williams; "Charging Your Own Car," John B. Rathbun; "How a Woman Sells Electrics," Mabel Condon; "Some Facts About Storage Battery Electrolyte," Hudson F. Smith; "Up-Keep Cost, Horse Drawn vs. Electric Vehicles," W. R. Metz; "Some Recent Electric Truck Applications," Fred W. Harrington; "Significance of Electric Truck Recorders," E. E. Witherby, and the electric pleasure car specifications for 1913.

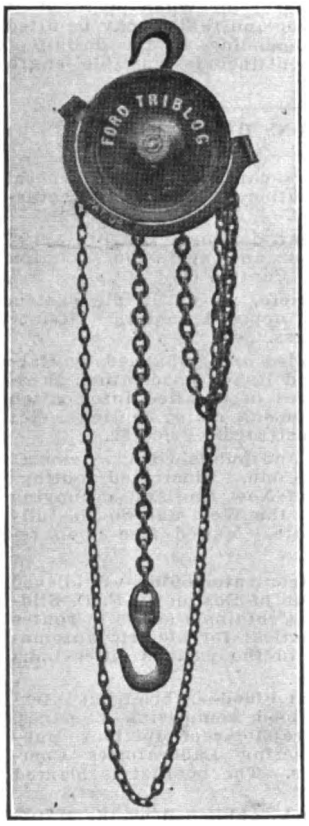
GARAGE AND REPAIR SHOP EQUIPMENT.

THE use of en bloc motors and the increasing number of commercial vehicles call for suitable equipment for handling this heavy work, and among the devices marketed is the Ford Tribloc, made by the Ford Chain Block & Manufacturing Company, 139 West Oxford street, Philadelphia. As will be noted by the accompanying illustration, it is a spur gear chain block of the hand hoist type, and one of its features is a patented loop hand chain guide, which prevents the hand chain from over riding the hand wheel when operating the hoist at any speed or in any direction.



Ford Tribloc.

In the Tribloc the load is held by a device entirely independent of the lifting mechanism. The maker points out that all of the applied power is the hoisting effort and that 80 per cent. of that applied to the hand chain is converted into lifting energy. The latter is so multiplied that one man pulling 82 pounds can lift a ton four feet a minute.

The parts are few and simple and the gears centre around the one main bearing. The gears are of steel covered by a dust proof steel case and are balanced. All working parts are of steel and the swivel hook is a steel forging. The Tribloc is made in sizes ranging from .25 ton to 40 and is guaranteed for five years. The patented loop guide can be furnished on all sizes and is interchangeable with the strap hand chain guide. The company also manufactures differential and screw gear hoists. Figures and data will be forwarded upon request.

AMERICAN SONOSCOPE.

Knocks and pounds about the motor are sometimes difficult to locate, especially when the noise is not very loud. The American Electric Company, State and 64th streets, Chicago, is manufacturing a device for this work called the Sonoscope and it is held that by it the most baffling click may be located easily. It operates on the principle of a telephone receiver, and owing to the construction of the part held to the ear the sounds are greatly magnified. The outfit comprises the receiver member and test rod, the latter being attached to the device when its use is desired. It is moderately priced and the maker claims that it is invaluable in the repair shop as considerable time and expense is saved in locating mysterious noises annoying to the owner.

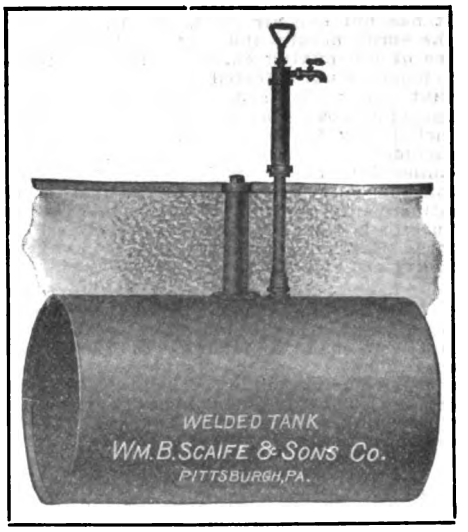
GASOLINE STORAGE OUTFITS.

The storage and handling of gasoline are becoming items of importance in these days of constantly increasing cost of fuel, and garages and service stations are giving the subject more attention than formerly. Not only must the system make for convenience, but it must provide accurate means for noting the amount utilized as well as prevent loss by evaporation or careless handling.

The William B. Scaife & Sons Company, Pittsburg, Penn., manufactures a wide variety of gasoline, oil and fluid storage systems, one of which is shown in an accompanying illustration. They are made in various sizes ranging from 60 gallons to 1000 and come complete for installation.

The tanks are constructed of a high grade open hearth steel and are free from rivets, etc., being welded by the autogenous process. They are thoroughly galvanized inside and out by a hot process and pure zinc is utilized. A coat of rust proof paint is applied to the exterior and each tank is tested with compressed air to insure absolute tightness.

The filler pipe is sturdily constructed and a galvanized malleable iron rim cap is grooved on the inside to fit tightly over two strong lugs on the filler pipe casting. A bronze padlock prevents tampering. The cap requires no tool to operate, a quarter of a turn with the hand releasing it after it is unlocked. Several lug slots are provided through which the air enters by suction while the contents of the tank are being pumped. A perforated brass strainer sets inside the pipe, easily removed for cleaning, and there is also a screen covering the vent space. When the filler pipe is installed under a driveway or sidewalk a cast iron box with hinged cover is provided at a slight additional cost.

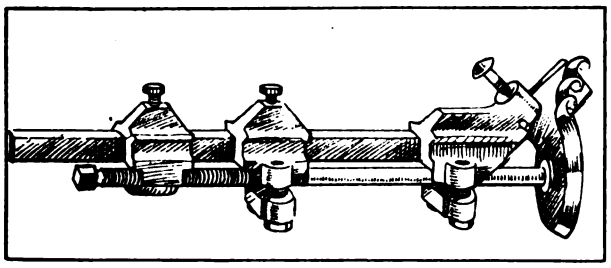


One of Several Gasoline Outfits Made by William B. Scaife & Sons Company.

The long distance pump is of the suction type

Digitized by Google

and it is stated that it is very powerful and easily operated. The base is provided with an opening to admit the suction pipe in case it is not desir-



Noonan Valve Turning Tool, a Compact, Adjustable Device for Recutting Seats.

able to cut a hole in the floor and have the supply pipe enter at the bottom. Either bolts or screws may be employed for securing it. The faucet is of the anti-drip type and has improved shut-off features. Provision is made for holding a can, etc. A bronze padlock is securely riveted to the top cylinder casting, and swings aside out of the way when the pump is operated. The foot valve is located in the lower cylinder casting and contains a ground bevel seat. The pump faucet, cylinder and inside parts are brass, the handle, top and bottom castings of malleable iron galvanized and the base is cast iron black enameled. The maker will forward particulars, including price list, upon application.

NOONAN'S VALVE TURNING TOOL.

A tool for obtaining a new seat on a valve is being marketed by F. A. Baker & Co., 10 Warren street, New York City. It is shown in an accompanying illustration, is adjustable and will take any size valve of any angle. The construction is simple and a quality of the device is that the cutters may be removed and resharpened when they become dull with service. The tool is 11 inches in length, constructed of high grade material and is highly polished. The method of fitting and recutting the valve is shown in the drawing.

TAPE GRIP WATER JOINT.

Herz & Co., 295 Lafayette street, New York City, is manufacturing the Tape Grip water joint, a device for making a connection between rubber hose and a metal pipe, such as the outlet manifold and the radiator. Rotating a ring member winds the tape firmly. It is held that it may be as easily displaced, and may be utilized over and over again.

TAD'S TROUBLE FINDER.

The Toledo Auto Devices Company, Toledo, O., has brought out what may be termed a mechanical stethoscope, called Tad's trouble finder. It is designed for locating mysterious noises which may develop in the power plant. The finder is made of wood and metal and is inexpensive.

RADICO.

The Radico Manufacturing Company, Springfield, Mass., is marketing a new compound known as Radico, which is guaranteed to stop leaks in radiators or other sections of the cooling system and without injuring the components. It is claimed that Radico will cure a leak in 15 minutes.

HILL-STAGE TUBE VULCANIZER.

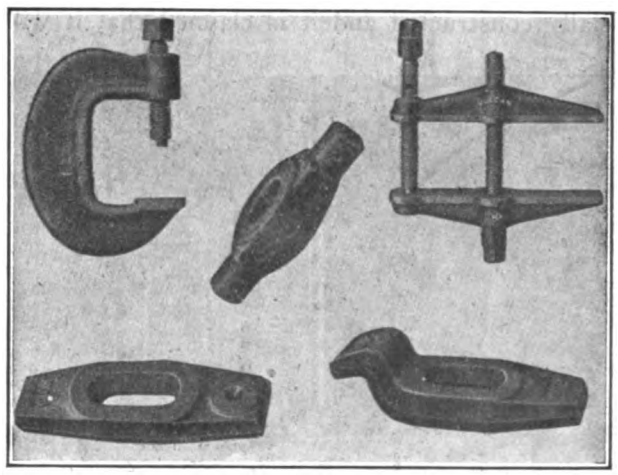
A revolving, quick steaming vulcanizer, said to permit the operator handling eight tubes at one time and without changing his position, has been brought out by the Hill-Stage Company of Anderson, Ind. The boiler is of porcupine construction where the flame strikes it, making for rapid and uniform heating. The vulcanizer can be operated with a gasoline burner or with direct steam. Details will be supplied on request.

VULCAN DROP FORGED CLAMPS.

Steel clamps for holding work on drill press tables or surface plates are very handy tools in the repair shop. J. H. Williams & Co., 40 South Clinton street, Chicago, is marketing a line of drop forged clamps known as the Vulcan and these are produced in a variety of forms to meet the requirements of different service. Several of the line produced by this company are shown in the accompanying illustration, including a machinist's clamp.

The last named type is constructed from a tough grade of steel which is submitted to a special process to increase strength. The knurled portion of the hardened and tempered screws permits of rapid and easy adjustment. They are made in three sizes having openings from 1.25 to 4.25 inches and are moderately priced.

The company also produces a number of drop



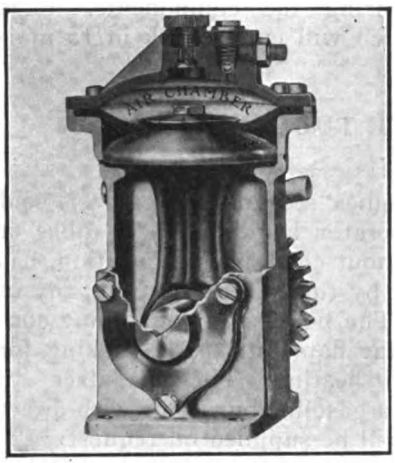
Vulcan Drop Forged Machinist's and Strap Clamps.

forged strap clamps, time saving devices, for use with the planer, lathe, drill press, milling and boring machines.

Digitized by Google

TAYLOR PORTABLE PUMP.

The Taylor Manufacturing Company, West 14th street and 48th avenue, Chicago, is marketing a new mechanically operated portable tire pump for garage service that presents interesting features because of its convenience and compactness. The pump proper is driven by a .25 horsepower electric motor, which is constructed either for direct or alternating current and for varying voltages.



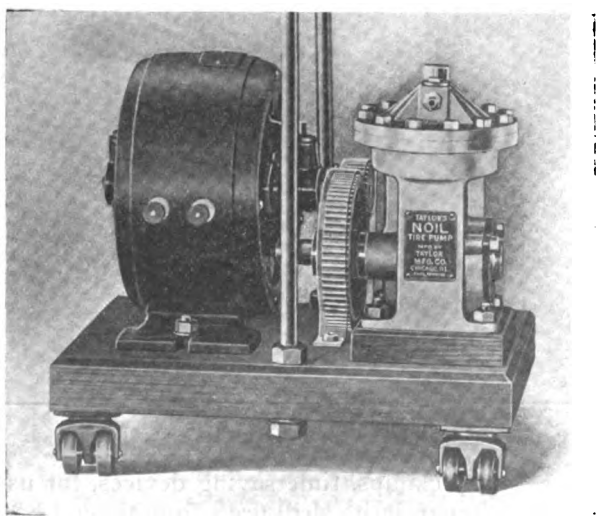
Air Chamber of Noil Pump.

The outfit is mounted on a heavy golden oak base and may be moved easily about the garage, it rolling on four heavy steel casters. A looped steel handle is provided, and its weight makes for convenience in operation.

The motor is mounted beside the pump and drive from the former is by means of steel pinions and cast iron gears. The equipment is very complete, including 15 feet of high grade flexible hose with connection and pressure gauge and 15 feet of electric wiring and socket.

The pump itself is known as the Noil, so named because its operation precludes all possibility of lubricant or oily vapors being carried with the air into the inner tube when inflating. The pump works on the plunger-diaphragm principle, and it is held that frictional heat is eliminated. It is but 7.5 inches high, weighs but 6.5 pounds and employs no leather cups, etc.

The crankcase is of aluminum and gears and plunger of solid bronze. The plunger is specially constructed and it is claimed that it will withstand a pressure of 1000 pounds. As will be seen from the accompanying illustration showing a cross section of the pump, its air chamber is independent of the crankcase, being separated from it by an air tight rubber diaphragm which forms the base of the air chest. Since no lubricant enters this chamber no oil can be discharged. One of the qualities claimed for the Noil is that it will deliver a steady flow of air and that it will supply 90 to 150 pounds at low speeds.

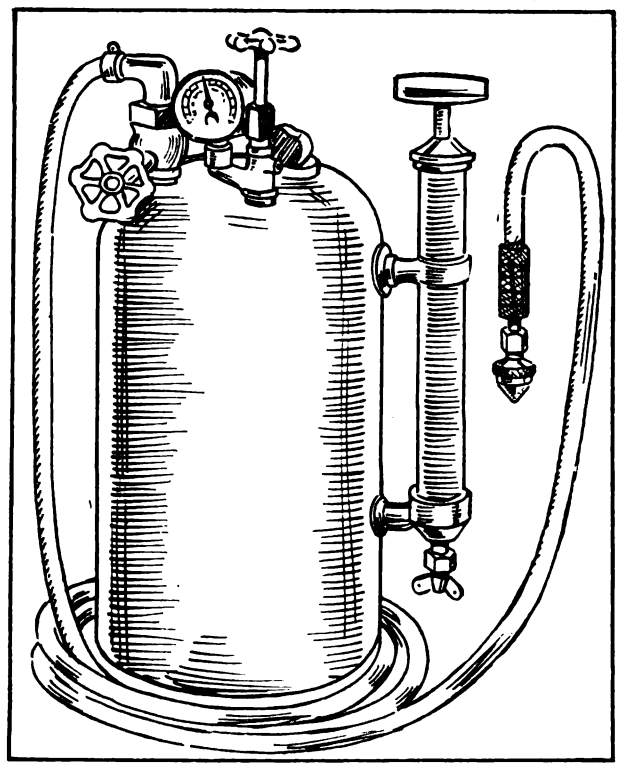


Taylor Noil Portable Garage Tire Pump, a Compact Unit Operated by Electricity.

TURNER MOTOR WASHER.

The Turner Brass Works, Sycamore, Ill., is manufacturing a new series of motor washers actuated by pressure. They are made in three sizes holding one quart, two and five gallons respectively. One of the largest sizes is shown in an accompanying illustration.

The tanks are constructed of drawn steel, equipped with a pressure gauge registering up to 100 pounds and have large hand pumps. The design is such that the washer may be connected to a pressure tank in the garage or repair shop, suitable connections being provided for incorporating in the line. Each washer is fitted with 10 feet of cloth insertion rubber hose having an adjustable nozzle.



Turner Motor Washer, Made in Three Sizes and Employing Fluids or Dry Air for Cleaning Purposes.

FOSTNACHT VALVE RESEATER.

The National Auto Specialty Company, Tama, Ind., is marketing the Fostnacht valve reseater, a tool designed especially for reseating and polishing valves with a minimum outlay of energy. The outfit comprises a large cutter, designed to fit all sizes of 45-degree valves and five sizes of cutters, from 1.5 to 2.25 inches. The latter are constructed of a high grade carbon steel.

Digitized by Google

RECENT PATENTS OF INTEREST.

Piston Packing Ring, Norbert Danes Hamel, Gardner, Mass., No. 1,062,095. The combination with a split piston ring whose ends are recessed in both edges; of a reinforcing member channelled at one end with the base of the channel fitting inside one ring-end and the flanges thereof fitting in its recesses and adapted to slide into the recesses of the other ring-end, the base of said channel being longitudinally slotted, and a screw inside the other ring-end engaging said slot.

Muffler, Orville Z. Frazier, Elkhart, Ind., No. 1,062,092. A muffler comprising a main casing, a plurality of chambers arranged therein, said chambers being graduated in size and having the upper edges thereof in the same horizontal plane as the upper edges of the side and end walls of said main casing, communicating means between said chambers and the main casing, means to supply exhaust gases to the smallest chamber, and discharge pipes leading from said main casing.

Adjustable Alligator Wrench, Henry Adalbert Smith, Elgin, Ill., No. 1,062,047. In a wrench, the combination of a fixed jaw, a pivoted jaw, a handle having a recess in its forward end back of said pivoted jaw, a spring one end of which engages said pivoted jaw and tends to open the same and the other end of which spring is bent upon itself and sprung into the recess in the handle, means for closing the pivoted jaw against the tension of said spring, means for engaging the spring intermediate its ends during part of the movement of the pivoted jaw whereby said jaw is held under two different tensions during its movement, said means comprising an abutment formed by the extremity of the bent over portion of the spring, and a saddle attached to the fixed jaw and incasing the devices for operating the pivoted jaw.

Silencer for Gas Engines, Hiram Percy Maxim, Hartford, Conn., No. 1,060,925. A silencer for gas engines and the like comprising a reversely directed, eccentrically arranged, nested series of wide cylindro-spiral shells having slightly lapping ends and forming compound series of wide alternately reversing spiral whirl chambers, each gradually expanding radially from its admission end and gradually contracting towards its constricted discharge throat, each discharge throat being angularly advanced in its discharging direction beyond the admission end of the succeeding outer chamber receiving material therefrom, the final outer whirl chambers having corrugated or roughened walls and a progressively greater cross section than the preceding chambers, a casing within which said shells are arranged, grooved supports in which said shells and casings are mounted and provided with admission and discharge connections suitable for exhaust gases and for cooling fluid, said supports comprising an independently adjustable intermediate support within said casing for one end of each said shells and connecting means co-operating with said supports.

Inner Tube Valve, John S. Harper, Youngstown, O., No. 1,061,069. An inner tube valve comprising a casing adapted for attachment to a wheel rim, said casing having one end open and provided with a counterbore, the main bore of the casing terminating at a point intermediate of the ends of the casing, and the casing being provided with a reduced bore extending from the inner end of the main bore to the end of the casing, the face of the main bore being provided with a plurality of feed grooves, a valve having a cushion head and a stem slidable in the reduced bore, the inner end of the main bore forming a valve seat, the upper end of the valve stem being slotted, a transverse retaining member engaged in the wall of the casing and passing through said slot and a stop pivoted to the top of the stem to close the slot and thus prevent displacement of the valve when air is forced inwardly through the same.

FORMULAE AND USEFUL MECHANICAL TABLES.

Alloys for Metal Patterns.

An alloy suitable for small metal patterns is composed of tin one part and lead one part by weight. The result is a somewhat soft alloy which requires care in the handling of the patterns. Some harder mixtures are as follows:

Lead	Antimony	Tin
55.0	30.0	15.0
55.0	22.7	22.3
61.3	18.5	20.7

A white metal that has small shrinkage and is good for pattern plates is lead 90, antimony 10. A harder metal with small shrinkages and very good for pattern plates is zinc 66 per cent., tin 34 per cent. An amalgam, very convenient for stopping up holes that cannot be soldered easily, is made from the filings of the last named alloy, and mercury kneaded in the hand into stiff dough, squeezing out all the mercury possible. This amalgam should be pressed when first made, into the cavity and allowed to harden. When hard it may be filed or scraped like the metal itself.

Melting Points of Alloys.

The following table gives the melting points of alloys of tin, lead and bismuth:

Tin	Lead	Bismuth	Degrees Fahrenheit	Tin	Lead	Bismuth	Degrees Fahrenheit
2	3	5	199	4	1	—	372
1	1	4	201	5	1	—	381
3	2	5	212	2	1	—	385
4	1	5	246	3	—	1	392
1	—	1	286	1	1	—	466
2	—	1	334	1	3	—	552
3	1	—	367				

Gears for Screw Cutting.

Take from the index the number of threads cut by equal gears and multiply it by a number that will give for a product a gear on the index. Place this gear on the spindle or stud. Then multiply the number of threads an inch to be cut by the same number, and put the resulting gear on the screw. For example: The lathe cuts four threads by equal gears, and 13 threads an inch are wanted. then

$$\frac{\text{spindle or stud}}{\text{threads to be cut}} = \frac{4}{13}$$

The constant 5 will give for a product a gear on the index, and

$$\frac{4 \times 5}{13 \times 5} = \frac{20}{65}$$

Therefore, to cut 13 threads an inch, would require a gear of 20 teeth on the spindle or stud, and a gear of 65 teeth on the lead screw.

Care of Grinding Wheels.

When a grinding wheel becomes glazed or smooth it is necessary to redress the surface or it will continue to grow smoother, lose its cutting ability, heat the work and cause chatter. Glazing is caused by two factors—too high speed or too hard bond. After the wheel has been dressed by passing a diamond point across its face its speed should be reduced in an effort to prevent further glazing. If this does not do it, increase the speed of the work.

U. S. Standard Screw Threads.

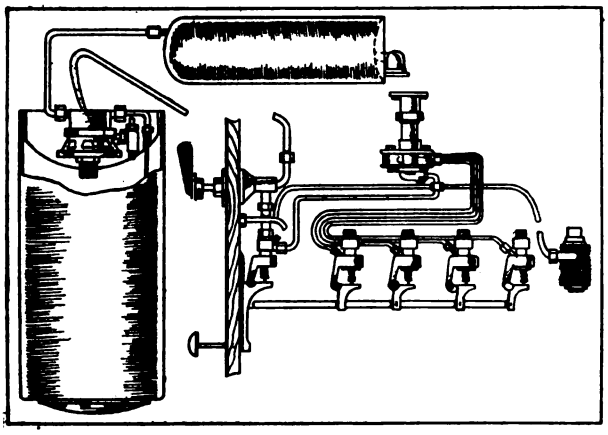
MECHANICAL NOTES FOR GARAGEMEN.

A MOTOR starter utilizing the pressure principle where the crankshaft of the internal combustion engine is rotated through application



H & M Automatic Pressure Motor Starter Employing Carbon Dioxide Chemically Produced.

of carbon dioxide to the piston, is the H & M automatic pressure starter, produced by the Ham-Meix Manufacturing Company, Indianapolis, Ind. The carbon dioxide is chemically produced, being controlled and maintained by the use of a liquid tank, generating or storage container and an automatic diaphragm valve. It is held by the maker that carbon dioxide is non-explosive, will not injure metals or rubber and that it may be employed for inflating tires.

The larger tank is carried at the rear of the machine, is tested to withstand a pressure of 500 pounds and is equipped with a diaphragm valve so constructed that it may be adjusted to control any pressure from five pounds to the maximum. The liquid tank is smaller and is equipped with a filler cap for replenishing the charge when necessary, but it is stated that one filling will suffice for 60 days. Extra recharges are put up in convenient packages and are moderate in price.

A pipe is led from the storage tank to a dash shut-off valve having a detachable key for locking purposes, thence to a diaphragm valve. The gas flows through another tube to a distributor which may be a four or six-cylinder unit, and which is driven at camshaft speed. The discs and ports of the device are so arranged that pressure is admitted in the proper firing order of the motor.

After leaving the distributor the gas passes to a diaphragm motor valve on top of each cylinder, thence to the combustion chamber, forcing the piston downward. The construction is such that compression is relieved, enabling the motor to be spun easily with a very low pressure. The motor valves are operated by a push button on the dash. Actuating this button also permits of the passage of gas from the storage tank to the distributor.

The system is applicable to any type of gasoline car and is made in several sizes to meet requirements of installation. All valves are adjusted and assembled before leaving the factory and are held to be non-leakable.

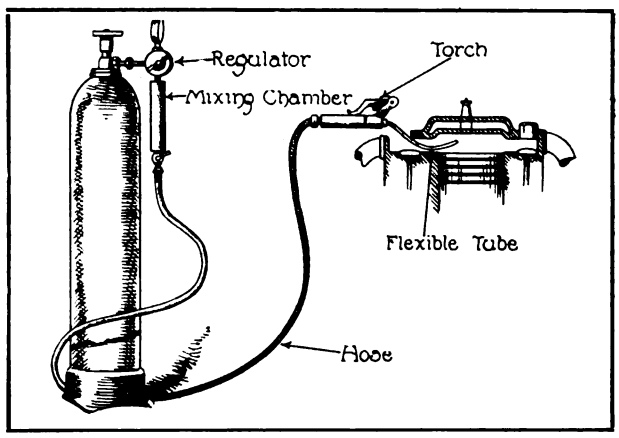
OZO, A CARBON DESTROYER.

The progressive repairman does not hesitate to install time and labor saving devices. Not only is he benefited, but the customer as well, in that the latter is saved considerable expense. The cost of removing carbon from the cylinders of a motor varies, but in the majority of instances it is necessary to displace the cylinders to clean out the deposits, and the entire work not only takes time, but the labor is costly.

A carbon removing outfit, which not only is said to be practical, but capable of doing the work at slight expense and in short time is the Ozo, marketed by the Ozo Company, 18 Tremont street, Boston. Its principle feature is that the accumulations may be removed without any other work than taking out the spark plugs or valve caps, and the maker states that an ordinary four-cylinder motor may be cleaned in about 20 minutes.

The system does not include chemicals or liquids, a harmless gas being introduced into the cylinders where it burns the carbon and without any accompanying flame. The accompanying illustration presents the outfit and shows method of operation. The gas stored in a container provided with suitable valves, etc., passes through a retarding chamber or regulator, which is employed for the purpose of reducing the pressure to the required number of pounds.

It then flows through a rubber hose to the automatic torch, attached to which is a flexible tube. The latter is inserted through the spark plug or valve cap opening into the cylinder and the gas uniting with the carbon destroys the latter entirely. Suitable controls are provided for the workman and it is stated that the operation is so simple that the work may be accomplished



Ozo Carbon Destroying Outfit, Utilization of Which Removes Deposits Without Displacing Cylinders, Etc.

easily by one who has had but little experience.

The Ozo method has been adopted by a number of garages and service stations.

TEMPERING SCREW DRIVERS.

Occasionally one will pick up a screw driver that is too soft. While they should be hardened to a degree of toughness, beyond that is not necessary as they are not called upon to do any cutting. When water is used for hardening it has a tendency to make the metal too hard. Oil is superior. If water is to be used it should be heated until it reaches nearly the boiling point.

ADJUSTING COLE OILER.

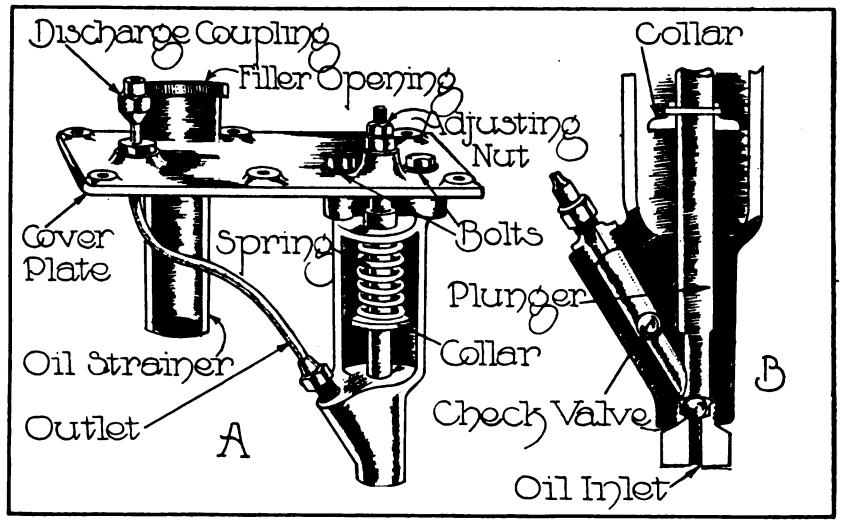
A knowledge of the components of the lubricating system and their operation will simplify the work of cleaning and adjusting. Although properly set at the factory the motorist may neglect to follow the instructions of the maker as to care and maintenance, resulting in inefficiency. Then again a different grade of lubricant may be used or conditions may arise when the amount of oil fed to the working parts requires augmenting. Dirt or lint may clog the filter member and pipes, necessitating cleaning of these parts.

In an accompanying illustration is shown the working parts of the lubricating system utilized on the Series Eight Cole cars and the adjusting mechanism is very simple, comprising a nut which is raised or lowered, increasing or diminishing the quantity of oil pumped. As will be noted the assembly is a unit and is removable. The pump member shown in detail at B is also removable, being secured to the cover plate by three bolts.

The fresh oil is poured into the reservoir through the filler opening and passes through a strainer, thence to the sump. The lower end of the pump body extends approximately to the bottom of the reservoir, oil entering by an inlet. The plunger of the pump has a collar secured to it, and also carries a spring. The collar serves a double purpose: First, to transmit the downward pressure of the spring, and second, to lift the pump piston when the eccentric which bears against its lower side rotates to the proper position. Thus it will be seen that the pump is raised by a cam and returned by a spring. Drive is by means of a worm gear from the camshaft, the reduction being 25:1, so that the pump eccentric cam makes only one revolution to 25 of the camshaft. The supply of lubricant is, therefore, proportional to motor speeds.

The operation of the system is simple. Upon the raising of the plunger oil is drawn in through the inlet and past the check valve. The latter is utilized to prevent the escape of the lubricant back into the sump when the plunger descends. On the down-stroke the oil is forced up past another check through a tube to the discharge coupling, thence to a sight feed on the dash. From the dash member it flows back to the crankcase, the circulation being maintained when the motor is operating.

To increase the amount of lubricant the adjusting nut is backed off or raised, permitting the plunger to make a longer stroke. To decrease the supply the nut is lowered.



Oiling System of Series Eight Cole Cars: A, Showing Adjusting Nut Controlling Stroke of Plunger; B, Plunger in Detail, Including Check Valves.

SOLDERING ALUMINUM.

In soldering aluminum difficulty is encountered in getting beneath the slight film of oxide which forms over the surface of the metal and which is caused by exposure to the air. The oxide is the same color as the metal and cannot be distinguished easily. The object sought is to get underneath this oxide while the surface is covered with the molten solder. Remove all dirt and grease with benzine, apply the solder with a copper bit, and when the molten solder is covering the surface of the metal, scratch through it with a steel wire scratch brush. This will break up the oxide underneath the solder, which containing its own flux, takes up the oxide and enables the surface of the aluminum to be tinned properly.

RENOVATING OIL LAMPS.

Unless the wicks are given attention and care is exercised not to turn them up too high, the interior of oil lamps will become smoked, especially the metal. If the finish is silver and it has become discolored, sometimes it is possible to restore it with a silver polish. If this treatment fails the finish may be made as good as new by utilizing a silver plating preparation, such as U-Kan Plate described in these columns a short time ago. When applied according to directions a brilliant surface is possible. The material is not expensive and a small bottle will keep the lamps in first class condition for some time.

SYSTEM IN LARGE SERVICE STATION.

Complete in Every Detail, Having Several Unique Features and Preventing Possibility of Leaks Existing Undetected--Is Rigidly Enforced.

GARAGE and service station methods of keeping account of labor, material and costs, must necessarily be complete in every detail in order that no item incidental to the business may be overlooked. It is usually the apparently small and insignificant things which are neglected, and it is really surprising the number of business men who possess only a superficial, or at best a general, working knowledge of their business. Attention is given more particularly to the most important phases of their enterprises, small details being utterly neglected and allowed to work themselves out as best they may.

Waste thus creeps in and if the business be prosperous passes by unnoticed. But if these small items could be gathered together and totalled, and the results shown for inspection, many proprietors of establishments would be staggered by the large aggregate allowed to be thrown away in the course of a year. In most instances it becomes not merely a problem of placing a concern upon a prosperous basis, but one of putting it upon a foundation of greater earning power.

If the system here described does not apply to the reader's particular establishment, a careful perusal of those which have been presented in previous issues of the Accessory and Garage Journal will doubtless serve the purpose, as they cover many phases of the automobile business. If it is found that some desirable feature has not yet been mentioned, systems to appear in future issues will probably meet all requirements.

It must be borne in mind, however, that system alone will not always cure the ills it is designed to remedy. The fault does not lie with system, however, but with the manner in which it is applied. Attention has been directed to business men who installed really efficient systems in their establishments and because they did not give satisfactory results, immediately became enemies of anything suggestive of orderly method in regulating accounts and were severe in their condemnation of what they called "new-fangled" innovations.

However, a careful investigation of the situation will reveal the cause for failure, the main reason developing as a non-observance of the method installed. To cite an instance, a garage keeper installed a system in which was included a requisition on the stock room for all supplies, in order that the status of this department could be accurately maintained. It was found by the stock clerk that in his absence workmen had entered the stock room and taken such supplies as were needed. When he called the proprietor's attention to these liberties, the workmen were questioned, with the result that they pleaded a rush job which would be lost unless attended to immediately. The proprietor saw that this job meant money to the garage and commended the workmen for their zeal in the interest of the establishment. With this approval the taking of stock without requisition became more frequent and often workmen afterwards neglected to report the transaction to the stock clerk, who could not account for the discrepancies between his records and the stock on hand. Add to this the stock clerk's discouragement at the failure of appreciation of his efforts, and it can easily be seen why the concern was no better off than before. The amount gained by the completion of the rush job was more than offset by the loss resulting from the lax enforcement of the system. Of course the proprietor placed the blame on the system, it never occurring to him that he might be the one at fault.

In large service stations, where elaborate methods of keeping account of business are employed, rigid enforcement is insisted upon. This is true with the Foss-Hughes Company, one of the largest distributing houses in the country, with headquarters at Philadelphia, Penn., and branches at Providence and Newport, R. I.; Wilmington, Del.; Baltimore, Md., and other cities. The system in vogue in the branch stations is substantially the same as that at the home office.

INSTRUCTIONS	INSTRUCTIONS

Fig. 1—Numbered Service Blank Filled Out in Duplicate, Two Going to the Office and One Being Kept by the Garage Foreman.

Digitized by Google

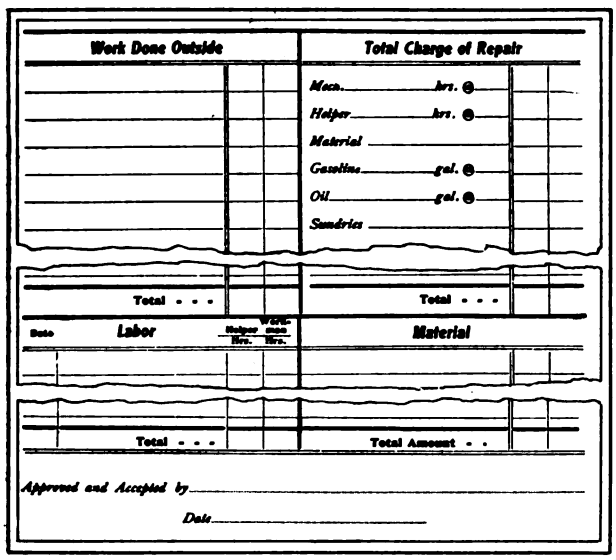

Fig. 2—Reverse Side of Service Blank Shown at Fig. 1, Which Contains Spaces for Complete Summary of Job.

It is complete in every detail and there is but little if any opportunity for leaks to exist undetected.

Every department is properly accounted for, and each is checked and rechecked against the other. In the service department every job is known by number and is so designated throughout the course of the transaction. When a car enters the service station, a numbered service blank, shown at Fig. 1, is filled out in the office of the foreman. This blank is numbered and upon it is entered the date, name and address of the owner of the vehicle, also the make of the machine. Beneath this is ample space for instructions as to what is to be done, whether it be overhauling the motor or merely washing and polishing. Included in these instructions may be put the time the car is promised in order that no mistake may be made in attending to the work.

The foreman keeps for his own use a card upon which is entered each job as received, with the date and time promised. This is followed out and the time of completing the job and delivery is entered, thus furnishing a complete record of the work when it has been concluded. This can be referred to instantly and any required detail ascertained. These cards, which are about two feet square, are devised for working convenience, to keep account of the progress of each job, but when one is filled with entries, it is filed away, adding another factor to the chain of evidence that can be referred to if necessary when checking up items in connection with various jobs.

The service blank, Fig. 1, is made out in triplicate, a pink sheet going to one bookkeeper, while a white sheet is given to a second in another department. The third sheet is a light brown cardboard, which is retained by the foreman. These blanks are 11 by six inches in size and on the reverse side are spaces for a complete summary of the job, including work done outside, if any, labor by hours, material and the total charge of the repair work. This portion of the blank is shown at Fig. 2.

The entries made upon this reverse side are the result of records taken from other departments of the establishment. When an employee starts work on a particular job he takes a time card, upon which he puts his name. This card, shown at Fig. 3, he then passes through an automatic time clock, which registers the exact time in a space marked "began." When he has finished the job, or is forced to leave it for any reason, the card is again placed in the clock and the time stamped in a space provided for "finished." When he again returns to the job the process is repeated, thus keeping a complete record of the number of hours he has worked upon the car. A space at the top is provided for the job number, the card being eight by three inches in size. These are also utilized in recording the total time of each workman for the week, in figuring up the payroll.

Should the workman find it necessary to insert a new part in a machine, he goes to the stock room and makes out a requisition for the part needed, inserting upon this blank the number of said part. This requisition is made in duplicate one of which the stock clerk retains, the other going to the workman, showing that the part in question has been received and delivered. When the stock clerk receives the requisition blank he notes the number of the part needed and then

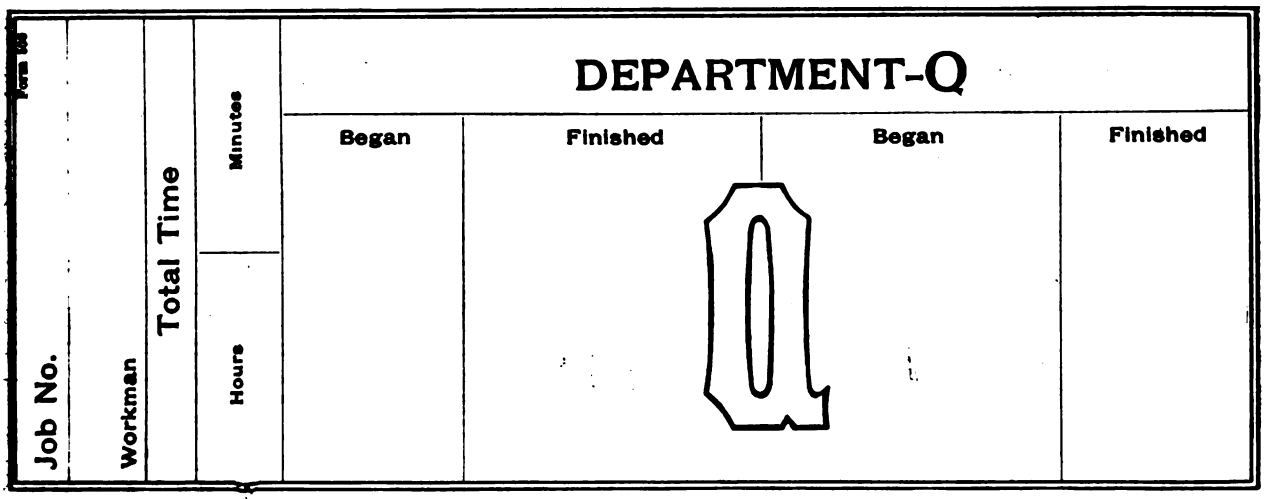

Fig. 3—Time Card Utilized by Workmen in Connection with Time Clock, Which Besides Being Used for Payroll, Proves Time Spent Upon Each Job.

Digitized by Google

turns to a card index drawer, in which is indexed all the various parts kept in the establishment. In this drawer the index is arranged by hundreds,

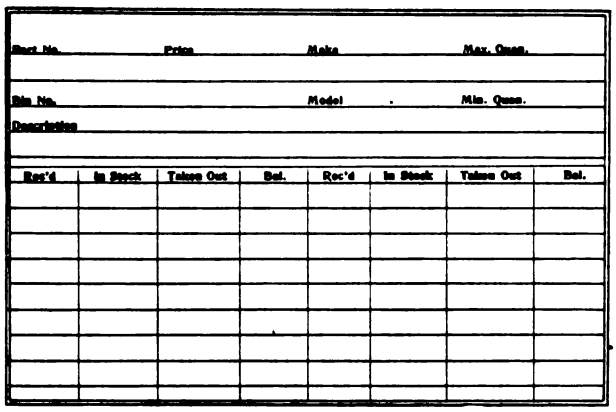

Fig. 4—Card Used in Index Drawer, Which Tells at a Glance Amount of Stock and Where It Can Be Found.

the numbers ranging in hundreds in the thousands, so that if a part should be numbered 2346 the clerk would seek his number between 300 and 400 in the 2000 column.

Having readily found the card, shown at Fig. 4, bearing the required number, he would learn that this part cost a certain amount, was of a specified make and model, also the maximum and minimum quantity carried in stock, and in what compartment or bin it could be found, each bin being numbered. From the spaces on the lower part of the card he could tell at a glance the number of those parts that had been received, the number in stock, the number that had been used, thereby leaving a certain balance in stock. If that particular part should have been allowed to become exhausted, which rarely happens, he could tell at a glance without indulging in a long, fruitless search. It will be seen how expeditious this method of stock keeping proves. Having secured the part and turned it over to the workman, the price is inserted in the requisition blank in accordance with the price given in the card index, thus fixing a uniform charge throughout and with no possibility of mistakes being made. The bin tags also carry a description of the part carried, with maximum and minimum quantity and the price, as a sort of voucher for the correctness of the card in the index file. The index card is six by four inches.

In addition to the record which the stock clerk has of material issued to the workshop, he takes his requisition blanks and proceeds to a triplicate autographic register in the office, upon which is entered the parts or supplies furnished to each job, the number being inserted in the space reserved for the name of the customer. Two of these slips are given to the two bookkeepers before specified, while the third is given to the customer, who may retain it for comparison with his bill if he so desires. This triplicate blank is shown at Fig. 5. It is 8.5 by six inches in size.

Every item of whatever nature is entered upon the blanks in this machine and can be checked against the stock requisition sheets, the repair and all other departments. One bookkeeper's duty is to record the various items upon the numerous blanks received to each individual account, which is totalled at the end of the month. The second bookkeeper records in a book provided for the purpose each item to the various accounts, except that the different entries are recorded in spaces provided for the separate departments, such as stock, gasoline, oil, labor, etc., enabling him at the end of the month to total each column, giving the total business done in each particular line, this being designated as the sales analysis for the period stated. The totals of each individual account must tally with that of the other bookkeeper, and if they do not, the account is checked up with the assistance of the various department blanks, until the discrepancy is discovered.

It will be seen that the duty of the second bookkeeper is not only to keep record of the numerous accounts, but the form is varied so that he may at the same time account for the different departments. At the end of the month, instead of the fatiguing labor involved in going through the books and placing each item in its proper space, all that is necessary is to add his columns, those running vertical, or from top to bottom of the page, representing the garage's departments, while the individual accounts may be totalled by adding the figures on the horizontal lines across the page.

The gasoline supply is accounted for by an ingenious arrangement attached to the fuel tank in the garage. In this instance a meter is arranged in a closed compartment, so that it is concealed from the view of employees. In some instances an employee may not even know of its existence if he is unfamiliar with the mechanical construction of gasoline tanks. The key to this compartment containing the meter is of course kept in the office and at stated times the device is read and the result compared with the accounts of sales on file in the office, so that there is little

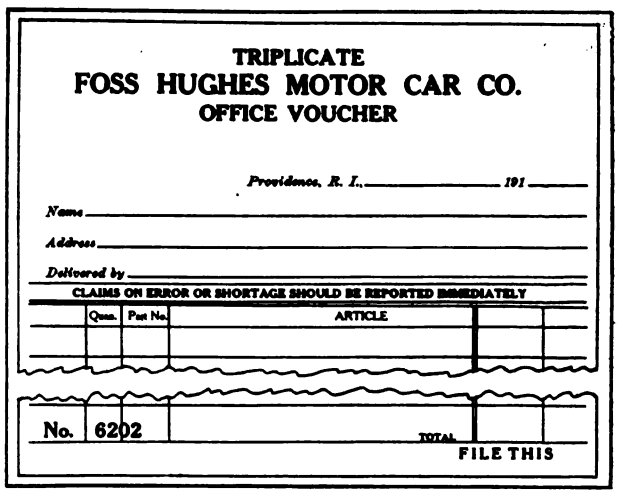

Fig. 5—Blank Used in Triplicate Autographic Register, One Blank Going to Patron, the Remaining Two Being Given to Bookkeepers in Office.

chance that fuel will be lost either through neglect or otherwise.

Numerous other features are included in the

Digitized by Google

system which prevents possibility of mistakes being made. In the stock room for instance, bins are provided for customers who may order parts that must be secured from the factory. With each factory order is sent an invoice card, containing spaces for the price, quantity and charges of the goods shipped, and this is filled out at the factory and returned with the order. Thus, express charges and other costs are charged to the customer's account and the invoice filed away for reference if needed. When a part is received the customer's name is entered upon a book provided for the purpose in the stock room, and the part is placed in a bin, the number of which is inserted opposite the customer's name in the book. Should an inquiry be received relative to the arrival of the order, the book is consulted, and if a number appears opposite the name the patron is informed that his part has arrived, if it be a telephone communication, or he is given the article if he inquires in person. The placing of an article in a numbered bin facilitates the delivery to patrons, which is especially appreciated in cases where time is an important factor.

No transaction is consummated without the signature of the customer. For instance, in the case of a repair job, when the total is summarized on the reverse side of the service blank, shown at Fig. 2, the patron is presented the blank and after inspection to his satisfaction he signs his name in the space at the bottom of the tag reserved for "Approved and accepted by," and the date.

In the matter of cash payments, such as express charges, etc., a special book is kept, and when a sum is paid, opposite that amount is secured the signature of the recipient of the money. Thus cash outlay is kept separate and in very simple form, with the protection afforded by the bona fide signature of the person to whom the money was paid. Cash receipts are, of course, carried in the usual manner, the system outlined here being in the nature of a safeguard against mistake or injustice to either service station or patron.

That the Foss-Hughes system does this has been amply proved during the several years that it has been in use and the thousands of patrons of the concern have yet to find an instance where a mistake, when made, was not readily traced and rectified. Such mistakes are very infrequent, but when they do occur they are found to be clerical and due to the human element entering into all business and not to the system employed.

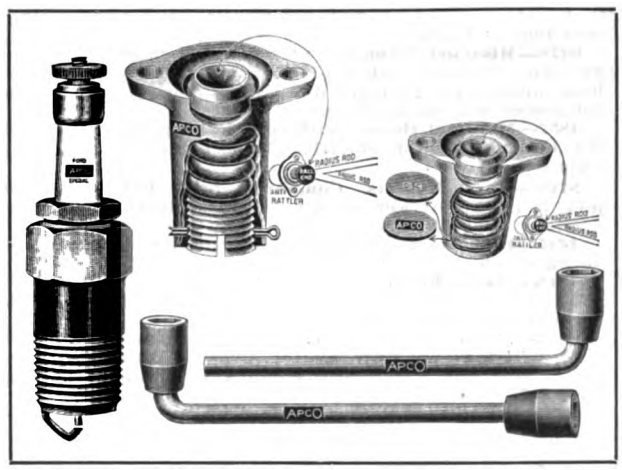
NEW FORD SPECIALTIES.

Auto Parts Company Announces Four New Apco Accessories.

The Auto Parts Company, Providence, R. I., manufacturer of Ford specialties, announces three new Apco accessories designed and constructed for Ford automobiles. These include an all steel socket wrench, a special spark plug and two types of anti-rattlers. The first named article is a handy and practical tool for removing and tightening the nuts retaining the cylinder head of the model T Ford motor, which members are difficult of access with ordinary tools, owing to the recess in which the nuts fit. The wrenches are constructed of a high grade, tough steel, in two styles. One has a single and the other a double end. The finish is blue steel.

The Apco spark plug is designed solely for the Ford motor and is based on the company's experimentation with this type of engine. The body or shell is made long to facilitate removal and with the use of an ordinary wrench, while the oil drip point is designed to prevent short circuiting through the use of excessive lubrication. The porcelain is packed with a copper gasket, is gas tight and the plug may be disassembled and reassembled without interfering with the proper gap. The shell is nickelled and highly polished. The retail price is moderate.

The Apco anti-rattlers are made in two styles, one with discs and the other with a screw adjustment. They are designed to eliminate the wear



New Products of Auto Parts Company, Including Ford Anti-Rattlers, All Steel Socket Wrench and Ford Special Plug.

of the ball and socket parts of the torsion rod. It is pointed out that filing the parts to stop play or rattling makes for misalignment and invites opportunity of breakage.

The disc design comprises a hard bronze member containing a socket which is pressed against the ball member by a coil spring. The tension is regulated by a number of small hardened discs of sufficient thicknesses to permit of very accurate adjustment. The other style is similarly constructed, a screw plug replacing the discs. The former is provided with slots which register with openings in the housing, and both parts are locked by a cotter pin. The manufacturer has an interesting proposition for dealers and garages.

Bert Dingley, in a National racing car, made by the National Motor Vehicle Company, Indianapolis, Ind., recently created a new record between Modesto and Stockton, Cal., covering the 30 miles in 29 minutes.

TRADE INFORMATION EXCHANGE

BUSINESS PROPOSITIONS.

Opportunities Are Offered Below for Agents to Secure New Lines, for Manufacturers to Extend Their Representation, and for Producers to Get in Touch with Those Who Are in the Market for Equipment and Supplies. All Are Opportunities for Live Men and Firms Seeking Profitable Relations.

The Following Details of Trade Opportunities Presented by Members of the Trade Information Exchange Are Published Without Names, Those Interested Desiring the Negotiations to Be Strictly Confidential. Replies Should Be Addressed by the Number Given and Sent to the Exchange with Postage for Forwarding.

CAR AGENCIES DESIRED.

5627—Minnesota Concern is in the market to represent a pleasure car listing between $700 and $2800.

2863—Vermont Firm, recently established, wants the agency for a pleasure car to sell from $450 to $1500.

6528—North Carolina Company is seeking the agencies for pleasure cars selling between $900 and $2500, and motor trucks listing from $900 to $3000.

6734—New York State House, doing thriving business, is anxious to take agency for pleasure cars listing from $985 to $2750, and power wagons between $1000 and $3500.

3861—Connecticut Concern is seeking to represent in its territory pleasure and commercial vehicles listing from $900 to $1200.

9478—Missouri Firm, recently changed hands and selling two standard makes of pleasure cars, wants additional agency for pleasure line listing from $500 to $5000, and power wagons at the same figures.

4857—Missouri House, with complete equipment, would like the agency for electric pleasure and commercial vehicles.

8769—Massachusetts Company, now handling two lines, is in the market for a high class pleasure car selling between $3750 and $6200.

1645—Iowa Concern wants information relative to pleasure vehicles selling between $850 and $1000.

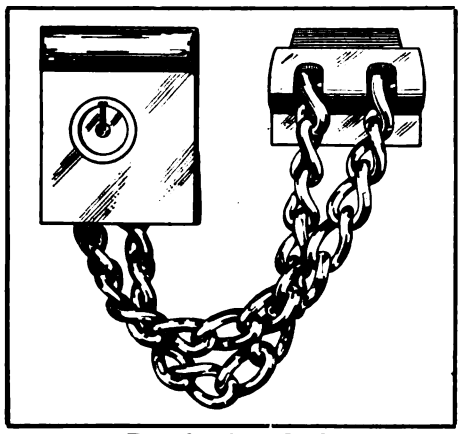
BRACELET AUTO LOCK.

Effective Device Designed to Prevent Operation of Car—Fits Any Machine.

The Bracelet Auto lock is the product of the Bracelet Auto Lock Company, 32 North Clark street, Chicago, Ill., and its design is such that it may be used to lock the throttle and spark levers or both, the steering wheel, or all three. It is a universal lock in that it will fit any make of motor car and consists of a Yale lock body, attached to which are two chains.



Bracelet Auto Lock.

The bracelet cannot be broken after being secured to the parts without so much damaging them as to prevent operation of the machine. All keys are different. The Bracelet Auto lock is constructed in sizes to meet the dimensions of different machines. The Bracelet Auto Lock Company has an attractive proposition for dealers.

BOWERS CARBURETOR.

Gilbert Manufacturing Company Announces New Popular Priced Design.

Announcement is made by the Gilbert Manufacturing Company, New Haven, Conn., of a new type Bowers carburetor which will sell at a popular price. The model G contains all of the latest improvements and is guaranteed to show a high efficiency as well as economy of fuel. The company also makes a high grade line of accessories, including tire and lamp covers, tube bags, etc.

SPECIAL WEED CHAIN PRIZES.

Maker Will Award Cash for Best Window Displays of Product.

Tourists and others cannot help but have their attention called to the necessity for carrying Weed tire chains during the next few weeks. The maker, the Weed Chain Tire Grip Company, New York City, is offering $250 in cash in prizes —$100 to the first, $50 to the second and $10 each for the next 10—for the best window displays, the award being based upon general attractiveness.

The company does not furnish display material for this contest, the idea being to secure originality on the part of the dealer. The Waite Auto Supply Company, Providence, R. I., for instance, has evolved an interesting object lesson in reproducing a scene at a railway crossing, in which one of the cars is equipped with Weed chains and the other—the one which is the victim of the accident—is not. Toy cars and locomotive and miniature dolls are used with good effect.

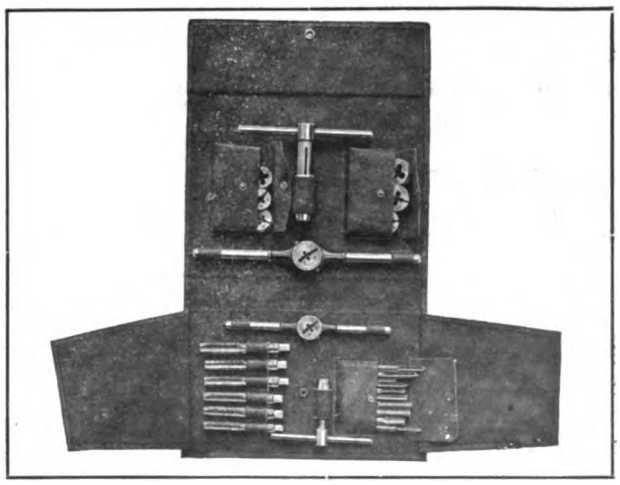
LIGHTNING REPAIR KIT.

Equipment Designed for Wide Variety of Work on Different Makes of Cars.

The Lightning automobile repair kit, which should prove a valuable addition to the repair shop and garage, as well as an interesting proposition to the owners of model T Ford, Maxwell, Metz and all medium priced cars, is being marketed by the Wiley & Russell Manufacturing Company, Greenfield, Mass., well known maker of screw cutting tools. The fine threads used in motor cars make close and accurate fits imperative, else the efficiency of the part is greatly impaired. The screw cutting assortment produced by the company is very complete and was designed with special reference to the screw threads found on the machines above mentioned. It comprises 16 taps, 16 dies, two stocks and two tap wrenches, permitting of the cutting of threads from 18 to 32 an inch, also pipe threads; in fact, the equipment is adapted to a large variety of work and different makes of cars, etc.

The assortment comes in a genuine goat skin leather case having compartments to protect the cutting edges of the tools, and the container is not only very compact, but durable. An illustration of the case presenting the arrangement of tools is shown herewith. The same high grade material and workmanship noticeable of the product of the Wiley & Russell Manufacturing Company are incorporated. The company has a very interesting proposition for the trade.

The Saurer Motor Company, Charles P. Coleman, president, a subsidiary of the International Motor Company, New York City, has purchased the plant of the Manganese Steel Safe Company,



"Lightning" Auto Repair Kit, Made by Wiley & Russell Manufacturing Company.

on West Front street, Plainfield, N. J., near the Clinton avenue station of the Central Railroad of New Jersey.

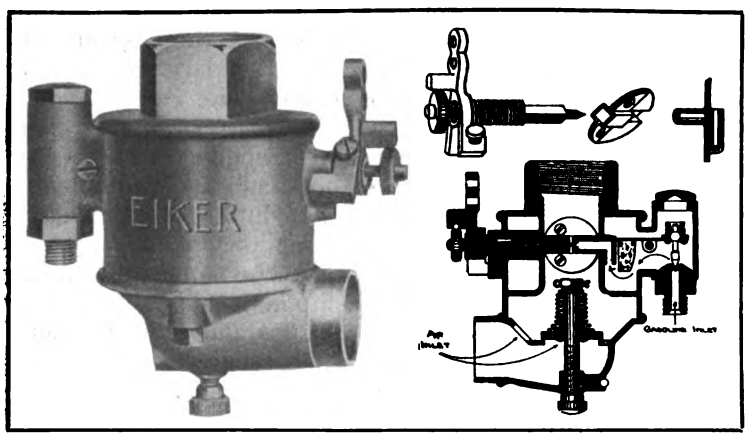
LEAVES WESTINGHOUSE COMPANY.

H. G. Mills Becomes Manager of Detroit Branch of Electric Auto-Lite Company.

One of the most interesting announcements in the automobile world recently is that of the resignation of Horace C. Mills from his position as special representative for the automobile starting, lighting and ignition division of the Westinghouse Electric & Manufacturing Company, to become affiliated with the Electric Auto-Lite Company, Toledo, O. He will be manager of the Detroit branch, with headquarters in the Boyer building, and will be closely associated with C. O. Miniger, secretary and treasurer of the company. Together they will have charge of the sales and service throughout the country.

VIEWS OF EIKER CARBURETOR.

The accompanying illustrations present exterior and sectional views of the Eiker carburetor, manufactured by the Eiker Carburetor Company, 1790 Broadway, New York City, which is described in detail elsewhere in this issue. The view at the right shows the spray nozzle, located in the middle of the throttle disc and the tapered adjustable needle which moves backward and forward automatically, increasing or decreasing the supply of fuel with the opening and closing, respectively, of the throttle.



Eiker Carburetor: At Left, Exterior View Illustrating Its Compactness; at Right, Sectional View, Showing Arrangement of Components.

WOOLER WITH CONTINENTAL MOTOR.

Well Known British Engineer and Designer Remains Behind in This Country.

Ernest Wooler, until recently designer for the Rolls-Royce Company, Ltd., and Brazil Straker & Co., Ltd., England, and a member of the Institute of Automobile Engineers of Great Britain, one of the recent party of visiting British engineers, did not return to his home country, having taken a position with the Continental Motor Manufacturing Company, Detroit, maker of Continental motors.

Mr. Wooler was enthusiastic over the automobile industry in this country and its magnitude appealed strongly to him. The future of the business in America and the wider field to be found here were factors which induced him to remain.

Mr. Wooler is a mechanical engineer of wide perience and his acquisition by the American industry is a distinct gain. He has designed some of the most expensive cars made, including the famous Crossley racing machine, and he is a driver of considerable reputation.

CROW COMPANY EXPANDING.

New Machine Shop Ready for Occupancy and More Land Is Acquired.

A new machine shop affording 5000 square feet of floor space has been built adjoining the south side of the Crow Motor Car Company's plant at Elkhart, Ind. The ever increasing demand from all parts of the country for Crow Elk-Hart motor cars has made it necessary to expand the factory and to install new machinery. The new structure was built to give plenty of light and will be utilized as a machine room. The floor is of concrete, to give a solid foundation for the heavy milling machines, lathes, drills, etc.

A large tract of vacant land west of the plant has also been acquired. At present this property is being used for switching purposes, but will accommodate other factory buildings when the volume of business indicates that additional floor space is needed. Adequate fire protection has been provided, the factory being equipped with an automatic sprinkling system. The latter comprises 10,000 feet of pipe with more than 1000 release heads. Heavy pressure is furnished at all times as the system is connected with both the city water supply and with a tank of 33,400 gallons capacity, which rests upon a brick tower and rises 60 feet above the ground.

A new, large elevator has been installed to hoist the heavy six-cylinder machines from one floor to another, the old elevator being used for the smaller models, thus effecting a great saving of time. The 1913 season has thus far been a notable one in the manufacturing career of the Crow Motor Car Company. The sales of the product have not only increased in all parts of the country, but in the foreign fields as well. At present there is a day and night shift employed in the factory and the work progresses with very little intermission.

While announcement has already been made that Earl Cooper in a Stutz won two events in the meet at Tacoma, Wash., July 5-7, additional information shows that Stutz cars took all three and finished in second place in the Inter-City race as well. In the contest for the Potlach trophy, the first day, Cooper lowered Tetzlaff's record for the course, made in 1912.

Economy Says:
Save Your Tires With a DEWEY Power Tire Pump

Costs only $10 Complete; Pays for Itself Over and Over Again

Don't think of the Dewey as merely a lazy man's friend. It saves more than hard work; it prolongs the life of your tires. The Dewey insures exact inflation, enabling you to comply literally with the conditions under which your tires are guaranteed. More than that, the Dewey pumps only pure air. It can't grease-rot an inner tube, because it is the only tire pump that is never oiled.

The Dewey, with high grade dial and all connections, including 12 ft. of special hose, tested to 1,000 lbs., sold everywhere under a year's rigid guaranty for **$10**

We'll supply you direct *if* your dealer hasn't the Dewey. Ask him first.

Dixon's Graphite Grease No. 677

For transmissions and differentials, flows with the gears at all temperatures and will not run off when the gears are stationary. The graphite coats the metal surfaces with a veneer that protects them from wear, and makes cool, quiet-running gears and bearings. "Lubricating The Motor", No. 49, explains more fully.

Phone Franklin 1188.

"IDEAL" Atomizing Primer

"The Primer that's Different"

Did you ever CRANK and CRANK and CRANK and then wonder why? The Ideal (Atomizing) Primer eliminates hard starting difficulties by forcing only a certain amount of the mixture (contained in the reservoir) into the intake manifold at each stroke of the handle. The mixture (high test gasoline or gasoline and ether mixed) is forced into the different branches of the manifold in an atomized spray, causing quick evaporation and an immediate ignition. This is what you want—with our guaranteed satisfaction or money back.

If your dealer cannot supply you, order direct from Manufacturer.

Complete polished brass $5.00. Nickel plated 10c extra. Special discount to Dealers and Jobbers.

Interstate Auto Accessory Co.

The Four Factors

IN the sale of Texaco Motor Oil by garage, supply houses and ourselves four factors play important parts. The first three are Texaco bulletin advertising, Texaco magazine advertising, and the Texaco sign. The fourth, and the vital factor, is the oil itself.

TEXACO
MOTOR OIL

owes its phenominal sale to its high quality, its actual worth. The extensive advertising done in its behalf would have been wasted if the oil itself had not at all times, under all circumstances, *made good.*

You can recommend Texaco Motor Oil to your customers without fear or favor. It will always prove worthy of your endorsement. You can afford to recommend it for this reason, and because it is, on account of extensive advertising, well known and an easy seller. You don't have to explain about Texaco. Simply produce the familiar can, one or five gallons. Your customer will do the rest.

If you aren't carrying Texaco Motor Oil write us for prices, advantageous delivery particulars, and information regarding dealers' helps. Address Dept. 9.

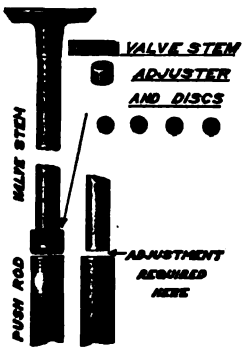
SOME MORE FORD SPECIALTIES

THERE ARE SIXTY OF THEM

VALVE STEM ADJUSTERS



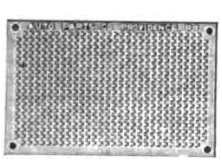
If you do not keep your valve stems adjusted properly your car will lose power, and as the valves are intended to open at a certain time, even a fraction of a second late means a great loss. The valves on a Ford car open about ⅜ of an inch and if there is ⅛ of an inch play between push rod and valve stem the valve only opens ¼ of an inch, or in other words you lose one-third of the power. Still another thing to be considered is the noise caused by this play and ninety per cent. of motor noises arise from this source (note the quietness with which the large cars run, due to the fact that the push rods are adjustable). The APCO Valve Stem adjusters consist of hardened caps made from Jessops steel and a quantity of very thin hardened steel discs. To apply the adjusters all that is necessary is to raise the valve slightly and slip an adjuster on the end, and if this is not sufficient put enough discs in the cap to reduce the play to the thickness of a piece of newspaper. The whole set can be put on in less than an hour and wear can be taken up very easily by inserting discs. All the high priced cars have an adjustment, and if our price was $10.00 you could not afford to be without them. State model and year of car or diameter of valve stems when ordering. Made in three sizes, 5-16 in., 3-8 in., 7-16 in. For Model "T" Fords we recommend the size 7-16 in., as they fit on the push rods of this car and do not have to be removed when grinding valves. Set includes eight adjusters and a quantity of discs to take up wear as occasion requires. The price is nominal, the improvement phenomenal. **PRICE $1.00 Complete.**

RUBBER FINISHED ROBE RAIL

Cut shows one end of the new Black Rubber Finished Robe Rail we are making especially for the Ford Touring Car. It is thirty inches long, finished in our famous hard rubber finish which is guaranteed not to chip. The rod is ⅝ inches in diameter and when open leaves a four-inch space between the body and the rail, this being ample accommodation for two light robes or one of the heaviest.

The Rail comes complete with screws and is a nobby addition and convenience. **PRICE $1.00.**

HEEL REST



This device is intended to be placed directly back of the three pedals on the Model "T" Ford and is a necessity on new cars to prevent wearing of the rubber mat and on the old cars to hide this worn spot. The plate is made from high grade aluminum, five inches wide and eight inches long. It will outwear ten of the stamped variety and will not rust or turn black like the imitation aluminum or iron ones. **PRICE $1.00.**

FORD FAN BELTS

If you have ever replaced a fan belt on your car you know that it is not an easy matter; then why buy a cheap belt that will not last a thousand miles? The APCO belt is made throughout of high grade belt leather and is triple stitched besides being cemented, and the joint is so well made it is nearly impossible to find it. We absolutely guarantee it to wear five thousand miles. **PRICE 60c EACH.**

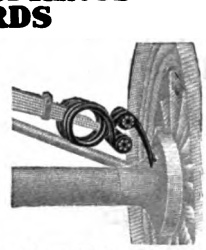
STARTING CRANK HOLDER

The aluminum starting crank handle makes more noise when the car is running than any other three parts of the car. The APCO holder keeps this quiet and also keeps it clean. This device is one of the lowest priced articles we list but it is one of the best. **PRICE 50c.**

WHEEL PULLER

The 1912 and 1913 Ford Cars are equipped with taper rear axles and when the wheel is put on and tightened up, it is almost impossible to remove it without a tool of some kind, and the one we offer will remove the wheel easily without marring the spokes or spoiling the thread on the hub. To remove wheel, simply screw our wheel puller on the hub and tighten the bolt which forces the wheel off. The device is exceptionally well made and is guaranteed to do the work in a satisfactory manner. **PRICE COMPLETE $1.00.**

ACME TORSION SPRINGS FOR "T" FORDS



The Ford is a fairly easy riding car, but with the Acme Torsion Springs we honestly believe it is the easiest riding car built. They don't make a boulevard out of a stone quarry but for smoothing out the rough spots in the road they have no equal. We absolutely guarantee them to make your Ford ride 100% better than it does now, and by the elimination of jolts and jars, strains and vibrations, they add miles and miles to the life of your tires and car. All shock absorber makers claim great things for their particular brand but you be the judge, and if you think you could get along without ours, return them at our expense and you can have your money back without a murmur. They are put on in an hour without machine work by simply replacing the Ford hangers with the ones we furnish. **PRICE For Complete Set of Rear Absorbers $12.50.**

EXHAUST WHISTLE

Undoubtedly you have felt the need of a long-distance warning signal that could be operated without removing your hands from the steering wheel, and for 1913 we offer the APCO Exhaust Whistle that has made good on thousands of cars all over the country during the past three years. The device is very simple, weighs a pound and can be put on your car in half an hour. There is nothing to get out of order, no back pressure, and it positively will not clog up, as no part of the whistle comes in contact with the exhaust gases except when the whistle is in use (most other whistles are always in contact with the gas and therefore they are clogged up and inefficient half the time). Remember, the APCO Whistle is not a musical instrument but a producer of real noise that will make the teamsters "sit up and take notice." Made for 1 in.—1¼ in.—1⅜ in.—1½ in.—1⅝ in.—1¾ in. pipes back of muffler, and is furnished complete ready to attach, including brass pedal, cable and screws. **PRICE $3.50—Half the Price, Twice the Noise.**

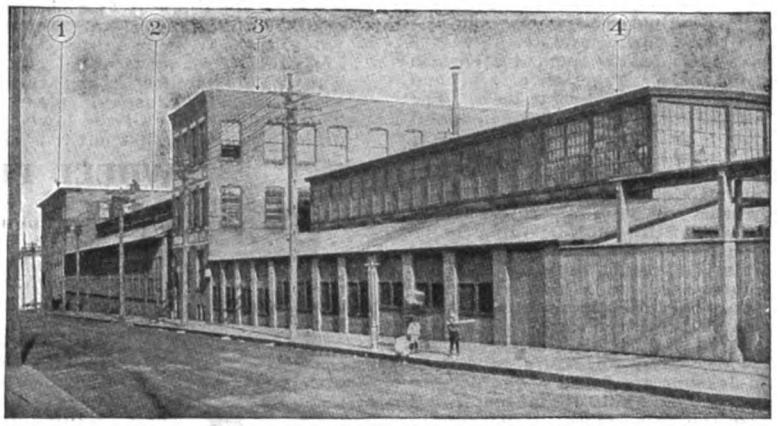
An Opportunity for a Big Auto Truck Garage and Repair Business in Providence, R. I.



THE GROWTH OF A LARGE MANUFACTURING COMPANY ENABLES US TO OFFER FOR SALE THE ABOVE PLANT, SPLENDIDLY LOCATED IN THE CENTRE OF THE WHOLESALE, WAREHOUSE AND MANUFACTURING SECTION OF PROVIDENCE.

The General Fire Extinguisher Company has outgrown its Providence Foundry Department and has been forced to combine it with its Auburn, R. I., plant, where large additions have just been made. The removal of the Company from this part of its Providence plant offers a splendid opportunity for the institution of a garage and repair shop. Motor trucking is bound to increase rapidly which will make the need of a centrally located place of this character well nigh imperative. The property we are now offering for sale is ideally located for just such a business for it is convenient and easily accessible to the many large business houses which are situated in that vicinity.

Building No. 1.

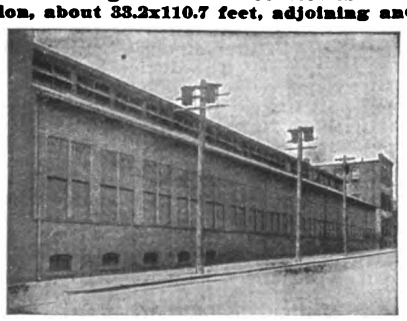
Building No. 3.

The plant is fully equipped with Grinnell Automatic Sprinklers, thus insuring low insurance rates. It is also piped for heating. The property will be sold as a unit or divided into nine parcels on five of which there are buildings as follows:

Building No. 1.—Three stories and high basement, brick, heavy construction, about 113.2x75.2 feet, adjoining and communicating with Building No. 2.

Building No. 2.—High, one story, brick and frame foundry, with monitor roof, about 199.6x75.2 feet, adjoining and communicating with Building No. 1 and Building No. 3.

Building No. 3.—Three stories and high basement, brick, heavy construction, about 33.2x110.7 feet, adjoining and communicating with Building No. 2 and Building No. 4.

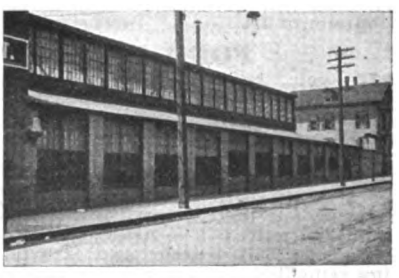


Building No. 2.

Building No. 4.—Brick and frame foundry, with monitor roof, about 120x55 feet, adjoining and communicating with Building No. 3.

Building No. 5.—One story, brick and stone, about 312.3x25 feet, separated from main buildings by driveway and connected by two overhead passageways.

The land fronts about 507.82 feet on West Exchange Street, about 219.30 feet on Bradford Street, about 257.12 feet on Cedar Street, containing an area of about 84,064.46 square feet.



Building No. 4.

Illustrated circular, prices and all further information may be obtained by applying to

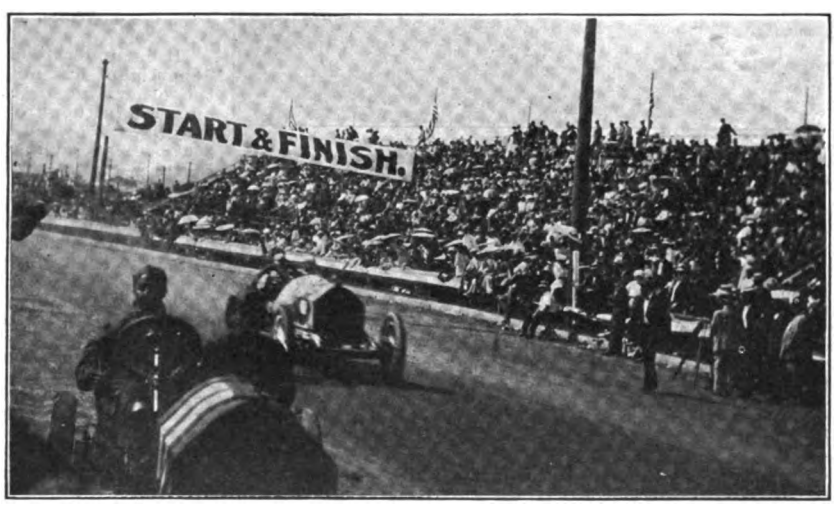
VOL. III. PAWTUCKET, R. I., AUGUST, 1913. No. 4.

STUTZ WINS AT SANTA MONICA.

Earl Cooper Takes His Third Long Distance Road Race for the Season—Barney Oldfield and Louis Nikrent, Driving Mercers, Finish Second and Third.

IN WINNING the Santa Monica road race of 1913, Earl Cooper not only has created for himself an enviable reputation among the racing drivers of the year, but he has established the Stutz car as a worthy contender for premier honors in a field comprised of some of the fastest makes of machines in the world. This was the third great victory for Cooper and the Stutz on the Pacific Coast this season. July 5, he took the 220-mile race for the Potlach trophy at Tacoma, Wash., only to follow this with the Montamarathon award, July 7, over the same course, this latter event being for 250 miles.

This year, the road race over the course at Santa Monica, Cal., was for 445 miles. Cooper's time for the distance being 6:01:52. In this respect the event ranks in importance with the 500-mile contests which are held on the Indianapolis speedway. If memory serves correctly, it was the longest race of this character held in this country. And for this reason and because the cars were limited to 600 cubic inches piston displacement, it was not expected that the speed would prove record breaking. Cooper's average was 73.8 miles an hour.



Earl Cooper, Winner of the Fifth Annual Santa Monica Road Race, Crossing the Finish Line in His Stutz.

In 1910, Teddy Tetzlaff in a Lozier covered the 202 miles at an average speed of 73.22, which at that time was a new American road-racing record. In 1911, Harvey Herrick in a National covered the 202 miles at a speed of 74.63, a new world's record. Last year, Tetzlaff regained the honors lost in 1911, this time driving a Fiat 303 miles at a speed of 78.5 miles an hour, which figure is still the world's record. Tetzlaff's Fiat had a piston displacement of 904.7 cubic inches, against 400.2 for Cooper's Stutz this year. Cooper was a contender last year, also in a Stutz, and was running in fourth place when the race was called immediately after three drivers had finished.

Barney Oldfield, driving a Mercer, finished second in this year's race, his time being 6:07:45. Louis Nikrent in another Mercer was third in 6:28:17. Four other cars were running when the race was called immediately after Nikrent crossed the finish line. Frank Verbeck in a Fiat completed 49 laps in 6:23:17; E. F. McConners in a Speedwell, 43 laps in 6:23:14; Charles Soules, Cadillac, 39 laps, 6:07:11, and T J. Beaudette, Cadillac, 36 laps, 6:24:44. The race was for 53 laps of the course, and the other cars entered were: Gaston Morris, Berlin special; Harris Hanshue, Apperson; Teddy Tetzlaff, Fiat; Dave Lewis, Stutz; John Opsahl, Buick; Frank Goode, Apperson, and Frank Siefert, National. It will be noted that practically all of the California favorites took part.

TAKES OVER MARATHON SALES.

Herff-Brooks Corporation to Handle the Entire Product in United States and Abroad.

The Herff-Brooks Corporation has been incorporated under the laws of Indiana with a capital of $100,000, to handle the output of the Marathon Motor Works, Nashville, Tenn. The offices of the new concern will be maintained at Indianapolis, Ind., and the sale of Marathon cars will be controlled throughout the United States. Branch agencies also will be established in foreign countries. According to present plans of the incorporators of the company, eight men will be immediately placed in the field to organize agencies, and the export business will be in competent hands.

The officers of the Herff-Brooks Corporation follow: President, Jacob Herff; vice president, Herbert Herff; treasurer, George Herff; secretary and sales manager, H. H. Brooks, who has been with the Marathon company for several years as general sales manager. All are experienced automobile men. The treasurer has been manager of the State Auto Company for five years, and with him has been associated his brother, Herbert, in handling Marathon cars in Indianapolis.

AUTO-LITE COMPANY EXPANDS.

New Factory at Toledo Provides More Than 25,000 Additional Square Feet of Floor Space.

The Electric Auto-Lite Company, Toledo, O., maker of starting, lighting and ignition systems, has greatly increased its available manufacturing space by the addition of a new plant, shown in an accompanying illustration. This plant adds over 25,000 square feet of floor space, and affords room for more than 100 additional skilled workmen and three floors of labor-saving automatic machinery. The rapid rise of the Electric Auto-Lite Company since it started five years ago at South Bend, Ind., to its present position has been interesting to note as an example of the remarkable success made possible by energy, ability and determination behind high-class goods.

New Three-Story Factory of Electric Auto-Lite Company at Toledo, O., Which Greatly Increases Manufacturing Facilities.

In an interview, S. L. Kelly, vice president and general manager of the company, who has been actively interested and instrumental in its success since the beginning, stated that the large demand for the Auto-Lite systems for 1914 delivery made the new factory necessary. It is anticipated that it will be imperative to again double factory facilities before the end of the present season, although the concern is now able to turn out in the neighborhood of 30,000 complete starting, lighting and ignition systems a year, or more than 100 every working day. Mr. Kelly said that the complete system will be installed as regular equipment on at least 10 of the standard cars in 1914.

SECURES HANLON PATENT.

Anderson Electric Car Company Purchases Entire Window Rights.

After many months of negotiating, the Anderson Electric Car Company, Detroit, maker of the Detroit electric line of cars and trucks, has purchased the entire rights in the Hanlon patent for electric car windows. This invention is held to cover the basic principles of the clear vision type of window, and the Anderson company secures control in America and abroad.

The features of the Hanlon window are held to be protecting the occupants of the machine from undesirable weather, and at the same time to enable the driver to see ahead clearly at all times. Adjustable from within, the operator may incline the front window to any desired angle, and in the event of rain, snow or heavy dust it may be closed from within in such manner that the storm will not beat against the front glass. When closed in very cold weather, it is maintained that it is impossible for frost to form on the glass. It is announced that this is but one of a number of new features which will be incorporated in the 1914 Detroit electric line.

EQUIPPING NEW CASE PLANT.

The J. I. Case Threshing Machine Company, Racine, Wis., maker of Case cars, has equipped its new South works at Lakeside, Racine, with machinery. The plant consists of a foundry and machine shop costing more than $1,250,000. A power plant is being built and the drive will be electric throughout. Considerable of the company's motor car work will be done in the new works.

DUPLEX COMPANY ELECTS OFFICERS.

The following directors were elected at the annual meeting of the Duplex Power Car Company, Charlotte, Mich.: Frank P. Town, M. J. Lamson, Maurice Bolstrom, George A. Williams, Frank L. King, Horton H. Bryan and Truman Gillette. Mr. Town and Mr. Lamson were elected president and secretary, respectively.

ALCO TO DISCONTINUE PRODUCTION.

American Locomotive Company, Maker of Cars and Trucks, Decides to Retire from Industry.

Not in years has the industry experienced a greater surprise than was occasioned when the American Locomotive Company, New York City and Providence, R. I., maker of Alco pleasure cars and motor trucks, announced its decision to discontinue the automobile department of its business, in the following statement issued from the New York office at 1886 Broadway:

The board of directors of this company, at a meeting held on Aug. 18, 1913, decided to discontinue the manufacture and sale of automobiles and motor trucks. The company takes this opportunity to assure all owners of Alco vehicles that arrangements will be made to furnish them with repair parts for a period of not less than five years to come, and, further, that it will fulfill in every respect its obligations given under guarantee to its customers.

AMERICAN LOCOMOTIVE COMPANY,
W. H. Marshall, President.

It is understood that the automobile department has not been as profitable as the other line in which the company is engaged, although the Alco car is one of the highest priced in America, selling at $6000. The company began the manufacture of Alco automobiles in 1906, when the machine was known as the American Berliet, the American rights to the Berliet patents having been secured. The plant at Providence, with its equipment, is valued at $3,000,000. Nearly as much more capital is invested in branches and service stations in various parts of the country.

WILLYS PURCHASES LAMP CONCERN.

The assets of the Castle Lamp Company, Battle Creek, Mich., have been purchased by John N. Willys, president of the Willys-Overland Company, Toledo, O., maker of Overland cars. The machinery and stock of material will be transferred to Toledo, where the manufacture of lamps will be carried on to supply Overland machines.

TO PRODUCE MUIR HUB.

Following the recent return of John Muir to London, England, it was announced that the Hayes Wheel Company, Jackson, Mich., had taken over the manufacture of the shock absorbing hub invented by him. The hub is said to contain a large number of balls, which distribute the road shocks before they are transmitted to the axle spindle.

EDWARDS RESIGNS FROM A. A. A.

F. E. Edwards, chairman of the technical committee of the American Automobile Association, has resigned, saying that his acceptance of a New York City agency for an automobile company made him ineligible to longer hold his office in that organization. Mr. Edwards has been a most prominent figure in the automobile world, having served as technical expert at all of the most important race meets held under the direction of the A. A. A. in the last few years.

Digitized by Google

HANDLEY FORMS NEW COMPANY.

Million Dollar Concern Established to Handle American and Marion Sales.

From Indianapolis comes the announcement of the formation of a new $1,000,000 concern, to be known as the J. I. Handley Company, which will own all of the Handley interests in the American Motors Company, the Marion Motor Car Company, the American Motors Realty Company, the A. & M. Sales & Service Company, all of Indianapolis; the American-Marion Sales Company of New York and the American Motors California Company of San Francisco. The new company is to be the sole selling agent of the American Motors Company and the Marion Motor Car Company, marketing all American underslung and Marion models.

J. I. Handley, President, J. I. Handley Company.

President J. I. Handley states that this move is to accomplish two purposes: First, it will unify all of his interests in these companies, and second, it will departmentalize more specifically the work of the various units. "With the sales, advertising and service work entirely removed from the manufacturing companies and thrown into another individual company, whose functions will be the distribution of the product of both the American and the Marion companies," says Mr. Handley, "we will be able to pursue a more concrete manufacturing programme. In other words, the American Motors Company will have nothing to do but build the famous American underslung models. Similarly the Marion Motor Car Company will concentrate entirely upon the production of the Marion sixes and fours. Thus the new company will be able to specialize and concentrate all its efforts in successfully distributing and promoting both of these products."

V. A. Longaker, in addition to continuing as chairman and general manager of the American Motors Company, will also, at the request of President Handley, accept the vice presidency of the new corporation. D. S. Menasco, vice president of the American Motors Company, will continue in this capacity, but will also become president and general manager of the American Motors California Company, with headquarters at San Francisco. J. I. Handley will retain the presidency of both the American and Marion companies.

REGAL INSTALLS EQUIPMENT.

Modern Machinery Designed to Make Vital Parts of Regal Cars Accurately, Secured at Heavy Expense.

Following closely upon the recent expansion of the Regal Motor Car Company, Detroit, maker of Regal cars, President Fred W. Haines announces the purchase and installation of a number of modern and proven automobile making machines. This is said to be one of the largest orders of its kind placed this year.

The majority of the machines were built especially for the manufacture of automobile parts and to assure accuracy and reliability in the construction of Regal machines. These devices have been installed in a large building at the Regal plant, which now covers a total area of 7.5 acres.

PROVIDENCE WINS AWARD.

Waite Auto Supply Company Gets Capital Prize in Weed Tire Chain Contest.

In the contest concluded by the Weed Chain Tire Grip Company, in which 12 prizes were offered, totalling $250, for the best trimmed window arranged by supply and accessory dealers, the first prize of $100 went to the Waite Auto Supply Company of Providence, R. I. The latter concern dressed its window to represent a village with houses, roads, railroads and dangerous grade crossings, a snow scene and other effects. Into this setting was woven the danger of skidding and the safety of Weed chains. Miniature automobiles were used and there were shown numerous wrecks of cars which had no chains, while those equipped with them proceeded in safety. The display was effective and realistic.

Following is the complete list of winners: First, $100, Waite Auto Supply Company, Providence, R. I.; second, $50, Bannister & Pollard Company, Newark, N. J.; ten prizes of $10 each, Tri-State Supply Company, White Plains, N. Y.; Albert E. Goodby, Providence, R. I.; Hamilton Hardware Corporation, Waterbury, Conn.; Blue Ribbon Garage, Bridgeport, Conn.; Herr & Co., Lancaster, Penn.; Post & Lester Company, Boston, Mass.; Louisville Auto Supply Company, Louisville, Ky.; Dayton & Walker Hardware Company, Paterson, N. J.; Ferris-Dunlap Auto Supply Company, Dallas, Tex.; Bi-Motor Equipment Company, Boston, Mass.

PURCHASES CINCINNATI CONCERN.

Rock Island Battery Company's Plant Added to the Manhattan Electrical Supply Company's Holdings.

The Manhattan Electrical Supply Company, 17 Park place, New York City, purchased the business and plant of the Rock Island Battery Company of Cincinnati, O., and took possession Aug. 1.

This important move does not mean that the Rock Island brand of dry battery will be discontinued, for it is the intention of the Manhattan company to make it in connection with Red Seal, Hi-Up, Blue Seal and Mesco batteries, now made at the other factories of the New York concern.

WEBB COMPANY IN DIFFICULTY.

The Webb Company, Allentown, Penn., maker of Webb automobile fire apparatus, has been placed in the hands of a receiver as the best way out of the difficulties in which the company finds itself. Robert E. Wilbur, who formerly was connected with the Lehigh Car & Axle Works, has been recommended to take charge of the business.

FOSDICK RE-ENTERS NEW ENGLAND.

With Frank F. Wentworth Has Organized Company to Handle Hupmobile—Both Have Wide Exerience.

Harry Fosdick and Frank F. Wentworth, two of the best known men in the industry in New England, have organized a company, with headquarters at 926-928 Commonwealth avenue, Boston, to take over the distribution of Hupmobile cars, made by the Hupp Motor Car Company, Detroit, in New England. Mr. Fosdick recently retired from the Hupmobile factory organization for this purpose, and his association with Mr. Wentworth is expected to increase the sale of this make of car very materially.

Mr. Fosdick is without doubt one of the best informed men concerning the history of the motor car in America. He began his connection with the industry in 1899, when he became associated with the first retail automobile salesroom in the country, at Boston. He is best remembered as having introduced the Mobile in that city. Later he established the Boston branch of the Winton, and after serving a number of years as its manager he organized the Harry Fosdick Company, which was interested in a number of foreign importations. He disposed of his stock in this concern to become identified with the Hol-Tan Company of New York City, of which he was vice president, handling the American sales of the Fiat. He also was associated with Vincenzo Lancia in introducing the Lancia car in this country. Some years ago he became sales manager of the Stevens-Duryea Company, Chicopee Falls, Mass., and left that concern to become sales director for the Hupp Motor Company.

Harry Fosdick, Pioneer Automobile Salesman.

Mr. Wentworth is quite as well known throughout New England, having interests other than in the automobile field. He did much toward popularizing the Overland car in the New England States, and has also been decidedly interested in the sale of the American, the Marion and other cars.

Digitized by Google

NEWSOM GOES WITH KEETON.

Executive Well Wnown in Connection with Successful Industries Assumes Important Duties.

H. H. Newsom, formerly manager of the McCord Manufacturing Company and later in a similar position with the Hayes Manufacturing Company, has been appointed manager of the Keeton Motor Company, maker of Keeton cars. He is well and favorably known as an executive of successful industries, his tenure of office with the McCord and Hayes companies witnessing a marked growth in both.

H. H. Newsom, Manager, Keeton Motor Company.

Mr. Newsom will relieve Vice President Keeton of much of the detail of the Keeton company's affairs. Mr. Keeton is also president of the Keeton Motors, Ltd., Brantford, Can., and the addition of Mr. Newsom to the Detroit factory organization will allow the former to give more of his time to the affairs of the Canadian company. Preparations are being made for an immediate enlargement of the manufacturing facilities of the company and an increase in the output for 1914 of about 3000 cars.

Mr. Newsom is a graduate of the mechanical engineering department of the Purdue University. He entered the automobile industry in its earliest stages and specialized in gas engines. He was the first secretary of the Wolverine Automobile Club of Detroit, to which position he was twice elected, and is popular in motor car circles in that city.

BECOMES VICE PRESIDENT.

Alvan Macauley Adds Duties of That Office to Those of General Manager.

Alvan Macauley, general manager of the Packard Motor Car Company, Detroit, maker of Packard pleasure cars and commercial vehicles, has been made a vice president of the concern, his title also including that of general manager. Mr. Macauley has been identified with three concerns, each of which occupies a commanding position in its field. Trained in the legal profession, he developed a grasp of large business affairs as patent counsel for the National Cash Register Company, Dayton, O. In 1901 he became identified with the American Arithometer Company of St. Louis, Mo., and was instrumental in its removal to Detroit, where it became the Burroughs Adding Machine Company. He resigned from the Burroughs company in 1910 to join the Packard company. He directs an organization of 7000 men and a business of $20,000,000 a year.

Alvan Macauley, Vice President Packard Motor Car Company.

WILL HANDLE SALES END.

Bump Assumes Important Position with the J. I. Handley Company—Other Appointments.

Following the formation of the J. I. Handley Company for the purpose of distributing the product of the Marion Motor Car Company and the American Motors Company, Indianapolis, Ind., makers of Marion and American cars, President J. I. Handley announces that he has associated with him F. R. Bump, who becomes general sales manager. With the acquisition of Mr. Bump, the new Indianapolis concern has acquired the services of one of the best known men in the automobile industry.

Mr. Bump graduated from Cornell University in 1896 and entered the bicycle business at the completion of his course. He was identified with several of the largest concerns in the country until 1904, when he became associated with the H. H. Franklin Manufacturing Company, Syracuse, N. Y. Within one year he became general sales manager of that company and built up one of the strongest sales organizations in the country at that time. He later became assistant general manager of the R-C-H Corporation, Detroit, at the time of its organization and remained there until the present. He has become acquainted with distributors and dealers all over the world, in his experience in the sales department of the industry. The reputation he has made in the motor car field is an enviable one, and automobile authorities look for his continued success with the Indianapolis firm.

In connection with Mr. Bump's appointment comes the information that Dr. M. D. McNab will assume the position of director of sales for the Middle West, with headquarters at Chicago. Dr. McNab is vice president of the Marion Motor Car Company, and this move will in no way affect that office. He is also well known in the sales end of the industry, having been manager of the Chicago branch of the Maxwell-Briscoe Motor Company for a number of years, and later acting in the same capacity

F. R. Bump, General Sales Manager, and M. D. McNab, District Sales Director, J. I. Handley Company.

when the United States Motor Company was organized.

W. S. Jewell, well known to many in the automobile industry, will have charge of the metropolitan district, with headquarters in New York City, which includes parts of New York, New Jersey and Connecticut.

FEDERAL ENLARGES PLANT.

Demand for Increased Production Makes Necessary Additional Room and Machinery.

The large addition to the plant of the Federal Motor Truck Company, Detroit, maker of Federal trucks, which will increase the floor space 33 per cent., will be ready for occupancy within 30 days. This addition to a factory that was already extensive was made necessary because of the demands for increased production. With the improved production facilities, which include new machinery as well as more room, the output will be increased fully 50 per cent. The impetus to a larger production has already been felt, for during the last month 50 per cent. more trucks were turned out than during the same month last year.

FORMS MARTIN TRACTOR COMPANY.

Concern Has Exclusive Rights Except for Knox Automobile Company to Make Tractor.

The Martin Tractor Company, Springfield, Mass., with a capital stock of $350,000, is a new concern in the commercial vehicle world, having been formed with the following officers: President, Harry G. Fisk; vice president and general manager, C. H. Martin; treasurer, E. O. Sutton; secretary, C. E. Beckwith. One of the largest stockholders in the new concern is said to be S. S. Eveland of Philadelphia.

Digitized by Google

CONTINENTAL BUYS MACHINERY.

Detroit Concern Took Advantage of Good Business Opportunity Offered by Lozier Motor Company.

As a result of a recent purchase of machinery for the Detroit plant of the Continental Motor Manufacturing Company, maker of Continental motors, a story has been circulated that the Continental company has acquired the Lozier Motor Company's motor-making plant. The latter concern has designed and built its own motors since Lozier cars were first built, 10 years ago, and will continue to build them in future, according to N. R. Feltes, treasurer of the company.

In explaining the report, George W. Yeoman of the Continental company says: "It is only fair to the Lozier company to kill this rumor before it has had time to spread. What really happened was this: Our Detroit plant was flooded with orders and we were trying to procure some new motor machinery quickly. In this dilemma we were offered a part of the new equipment in the Lozier plant for immediate delivery and we instantly purchased it."

BECOMES GENERAL MANAGER.

Clarence H. Booth Wins Place at the Head of Studebaker's Automobile Division.

In the appointment of Clarence H. Booth as general manager of the automobile division of the Studebaker Corporation, Detroit, maker of Studebaker machines, the directors of that company have clearly recognized merit, as it is generally conceded that the promotion was well deserved. Mr. Booth has been closely identified with the expansion of the Studebaker automobile business since its development began. When the E-M-F Company was making decided advances in the automobile field, he was operating a large independent steel stamping mill at Detroit, known as the Pressed Steel Sanitary Manufacturing Company. The automobile concern needed such a factory for the manufacture of fenders, hoods and other parts, but lacked the time to build a new plant, and as a result it became a part of the fast growing Studebaker business. Mr. Booth was retained in charge and in a short time was given Studebaker plant No. 3 in addition, with 2500 employees in his charge. He demonstrated his capacity and soon became manufacturing manager of the entire automobile division. Within a year he became assistant general manager and it is from this office that he has taken the position of highest responsibility, that of general manager of the entire automobile business. Within four years the men under his direct charge have increased in number from 1000 to 10,500.

Clarence H. Booth, General Manager, Studebaker Corporation.

COMMER TRUCK IN AMERICA.

English Firm to Establish Direct Factory Branch at New York—May Manufacture Here.

Commercial Cars, Ltd., Luton, England, maker of the well-known Commer truck, is to establish a direct branch of the company at New York City, with A. C. Platt, formerly connected with the Wyckoff, Church & Partridge firm, as manager. It is stated that arrangements for the production of the line in this country may be made later.

When the Commer Truck Company of America was incorporated in March with a capital of $3,000,000, it was assumed that it was for the purpose of taking over the Commer business in this country, which was interrupted by the failure of Wyckoff, Church & Partridge. The English company decided, however, at the expiration of the contract that a direct branch here would serve its interests better.

WINS DESERVED PROMOTION.

George H. Kelly Becomes Secretary and Sales Director of Baker Company.

The Baker Motor Vehicle Company, maker of Baker electric pleasure and commercial vehicles, has elected George H. Kelly, formerly manager of the truck department of the concern, to the office of secretary and sales director. R. C. Norton, heretofore secretary and treasurer, will continue as treasurer. E. J. Bartlett becomes sales manager of the truck department and O. B. Henderson continues as sales manager of the pleasure car department. The election of Mr. Kelly follows his success in developing the truck sales of the Baker company. Established scarcely two years ago, this department has the enviable record of placing machines not only in each section of the United States, but in cities in Europe, Africa, Japan, South America and Alaska. In giving Mr. Kelly the additional office of sales director it has been the purpose of the company to correlate the sales policies of its pleasure car and mechanical transport departments under one managing head, so that in their co-operative work with dealers the two divisions may be brought closer together and go forward on a mutually strengthened basis. His many friends throughout the industry will see in this a satisfactory recognition of his merit.

George H. Kelly, Secretary, Baker Motor Vehicle Company.

HOOD WITH EMPIRE COMPANY.

Becomes Commercial Manager in Charge of Combined Pleasure Car and Truck Departments.

Wallace C. Hood, formerly general manager of the Westcott Motor Car Company, Richmond, Ind., has been appointed commercial manager of the Empire Automobile Company, Indianapolis, Ind., maker of Empire cars. The constantly increasing volume of its business has made necessary many additions to the organization of that concern, Mr. Hood's being one of the most important to be made recently and one which will please his many friends. He will supervise the sales and advertising policies of the company and in the triangle composed of Cecil E. Gibson, general manager, and L. R. Wilbur, his assistant, should develop some very profitable sales policies for Empire distributors throughout the world. Mr. Hood is a man of keen ability in the forming and execution of sales policies. He was at one time sales manager of the Chalmers Motor Car Company, and later of the Metzger Motor Car Company, both of Detroit, and is one of the best known automobile men in the country.

Wallace C. Hood, Commercial Manager, Empire Automobile Company.

TAYLOR PORTABLE GARAGES.

New Jersey Concern Manufacturing Buildings Suitable for One or More Cars, Incorporating Many Features.

The Taylor Manufacturing Company, Montclair, N. J., has placed on the market a line of portable garages, suitable for one or more cars and complete in every respect as regards the private structure. The sides, roof and framework are made of steel of such construction as to produce a strong, rigid building. Three to five shelves are placed in each corner, tire hooks are put in convenient positions and robe rails are located on the side.

Taylor Portable Garage.

These garages are so constructed as to be exceptionally cool in summer, owing to the concealed ventilated ridge which keeps the air in motion and allows the warm air to escape. A work bench with a combination vise is placed in one corner. The front and side windows are guarded by heavy grill work, securely fastened on the inside, and the doors have interlocking devices. Concealed durable springs are placed on the windows for the purpose of raising and lowering them. The fold-over front doors when closed, being narrow and panel shaped, permit of the opening of one panel for entrance, thus establishing a single and double-door combination. These doors are guarded on the inside by a top chain bolt and a bottom foot bolt, making the building safe and weather proof. The Taylor garages are lighted by various means and several unique devices are adapted for heating purposes. The company will furnish detailed information upon request.

LAMB WITH NATIONAL TRUCK.

Frank E. Lamb of Lima, O., a former resident of Bowling Green, O., and promoter of the Gramm Motor Car Company, has been elected president and general manager of the National Motor Truck & Manufacturing Company of Gibsonburg, O., capitalized at $250,000, with $100,000 worth of stock issued. Other officers of the company are: First vice president, A. T. Crossett; second vice president, C. H. Hutchison; secretary, John O'Leary; treasurer, J. A. Nieset. The company will manufacture one and 2.5-ton motor trucks.

KISSELKAR MANAGERS MEET.

Annual Gathering of the Branch and Factory Executives Held at Milwaukee.

An occasion of unusual interest for all present was the annual gathering of the branch managers and the factory executives of the Kissel Motor Car Company, recently held at Milwaukee, Wis. The conference afforded opportunity for the company's officials to receive first hand information relative to the conditions wherever a branch establishment is located, and the heads of the branches gained precise knowledge as to policies and the mechanical details of the machines that are now being produced for the 1914 season. Practically all sections of the country were represented and the prevailing opinion was that the outlook was decidedly encouraging. While most of the managers have been associated with the company for a considerable length of time, few had seen the large auxiliary plant at Milwaukee, which is to be devoted largely to the production of Kisselkar pleasure cars, while the wagons and trucks will be made at the factory at Hartford, Wis.

The Officials and Branch Managers of the Kissel Motor Car Company During the Annual Meeting at Milwaukee, Wis.

The accompanying illustration shows the following who were present: Left to right, upper row—G. C. Frey, sales manager; J. M. Daggett, auditor; J. F. Lynch, manager St. Paul branch; P. J. Pollock, manager Chicago branch; Paul A. Rix, assistant sales manager; B. M. Linsley, manager Dallas branch; F. B. Hughes, manager Minneapolis branch; T. W. Warner, president Warner Manufacturing Company, Toledo, O. Middle row—Otto J. Koch, Koch Advertising Agency; H. B. Prudden, manager Boston branch; F. J. Edwards, manager Milwaukee branch; C. L. Curtis, manager Kansas City branch; E. Roger Stearns, manager Los Angeles branch; J. J. Kane, Jr., manager Philadelphia branch; H. S. Daniels, publicity manager. Lower row—George A. Kissell, president of the Kissel Motor Car Company; C. H. McCausland, manager New York branch; W. L. Kissel, treasurer of the Kissel Motor Car Company.

DISCUSSES STANDARDIZED CAR.

Important Convention of Parts Makers at Factory of Cole Motor Car Company in Indianapolis.

A meeting of many of the most representative men in the automobile industry was held at Indianapolis, Ind., recently, to discuss what was termed the new standardized type of automobile. The convention was called at the request of President J. J. Cole of the Cole Motor Car Company, and its object, as outlined by him, was to ascertain how best to scientifically handle the problems of volume and overhead, with the idea in mind of increasing the quality of the motor car and at the same time reducing its cost to the user. The question was gone over thoroughly and the companies represented included the following:

Timken-Detroit Axle Company, Detroit; Northway Motor & Manufacturing Company, Detroit; Mayo Radiator Company, New Haven, Conn.; Gemmer Manufacturing Company, Detroit; Timken Roller Bearing Company, Canton, O.; Dayton Engineering Laboratories Company, Dayton, O.; Detroit Steel Products Company, Detroit; Spicer Universal Joint Manufacturing Company, Plainfield, N. J.; Hydraulic Pressed Steel Company, Cleveland, O.; Firestone Tire & Rubber Company, Akron, O.; Stewart-Warner Speedometer Corporation, Chicago; Stromberg Motor Devices Company, Chicago; Janney, Steinmetz & Co., Philadelphia, Penn.; Curtain Company, Jackson, Mich.; Taylor Tire Pump Company, Chicago.

Cole representatives were present from New York, Boston, Brooklyn, Newark, Sioux City, Spokane, Toronto, Winnipeg, Vancouver, Washington, El Paso, Butte, Baltimore, Atlanta, Birmingham, Mobile, Buffalo, Chicago, Cleveland, Dallas, Denver, Des Moines, Detroit, Jacksonville, St. Louis, Los Angeles, San Francisco, Kansas City, Louisville, Little Rock, Memphis, Minneapolis, Omaha, Philadelphia, Portland, Me.; Portland, Ore.; Seattle, San Antonio.

STEWART-WARNER CLOSES BRANCHES.

The Stewart-Warner Corporation, Chicago, maker of Stewart-Warner speedometers, has decided to close 12 of its 20 branches in the principal cities and in their stead will establish a chain of 150 service stations throughout the country, which will more adequately serve the requirements of dealers and users.

Each of these newly established service stations will be completely stocked with instruments and replacement parts and equipped with machinery for installations and repairs. Eight branches will be retained as follows: New York, Chicago, Boston, Cleveland, Detroit, Indianapolis, Buffalo and San Francisco.

GENERAL NEWS OF THE INDUSTRY.

Latest Information of the Activities of Manufacturers and Dealers, New Concerns, and Removals, Incorporations, Building Operations, Changes in Personnel, Etc.

INCORPORATIONS.

The following concerns have been incorporated recently to manufacture or deal in motor cars, accessories, supplies, etc.:

City Automobile Company, Washington, Ind.; $3000; G. H. Greenwood, L. G. Helphenstine, A. L. Kennedy.

Schick Wheel & Tire Company, Wheeling, W. Va.; $150,000; A. Schick, J. E. Morgan, D. H. Taylor, L. F. Gundling, R. Walter, Marshall Statler, O. A. Statler.

Bell Locomotive Works, Yonkers, N. Y.; $20,000; H. W. Bell, J. H. Bell, W. G. Bellows.

Steinbeck Engineering Company, New York City; $250,000; H. F. Steinbock, A. B. Gormully, F. C. Slevers.

City Auto Corporation, Pulaski, Va.; $10,000; S. M. Lyons, W. H. Wysor, R. L. Gardner.

LeCompte Cycle Car Corporation, New York City; $60,000; G. Goldmark, L. S. Higgins, H. R. Buckingham.

National Motor Truck & Manufacturing Company, Gibsonburg, O.; $250,000; E. C. Rassell, C. H. Hutchison, J. H. O'Leary, A. T. Crossett, F. E. Lamb, J. E. Weisel, N. W. Rassell.

John E. O'Neil, Lawrence, Mass.; $3000; automobiles; J. E. O'Neil, M. J. Ganley, E. J. Farley.

Talking Horn Company, Middletown, N. Y.; $10,000; N. C. Oddo, T. H. Bingham, F. W. Morgan.

Motor Machine Company, Mobile, Ala.; $10,000; W. D. Bellingrath, J. E. Lewis, G. W. Morse.

Anthony Auto Repair Company, New York City; $10,000; J. Yandrasitch, F. M. Struckhausen, H. Struckhausen.

Vacuum Tire Corporation, New York City; $50,000; W. J. Woodcock, C. G. Ross, F. L. B. Gartner.

W. L. Auto Top Lifting Company, Cincinnati, O.; $10,000; W. Wirth, Oscar Lane, H. W. Fraser, G. M. Reswick, J. B. Clark.

Ohio Buick Company, Cleveland, O.; $200,000; R. H. Lee, W. J. Patterson, G. R. Collar, G. M. Gallagher, E. M. Holmgren.

C. & B. Garage, Chicago; $1000; A. E. Cosey, K. R. Ballentine, S. J. Matthews.

John V. Wilson Company, Boston, Mass.; $20,000; E. T. Carr, J. V. Wilson, P. H. Skidmore.

Trautman Corporation, Brooklyn, N. Y.; $1000; to manufacture tires; E. M. Trautman, F. A. Webb, C. Colsten.

Blue Hill Avenue Garage, Boston, Mass.; $10,000; F. H. Sidelinger, W. A. Clark, S. W. Culver.

Grand Avenue Company, Brooklyn, N. Y.; $500; to manufacture motors; G. F. Mason, F. G. E. Strohsall, H. W. Bender.

Chauncey S. Greene Company, Boston, Mass.; $20,000; A. A. Hoyt, B. S. Atwood, C. S. Greene.

E. A. Laboratories, Brooklyn, N. Y.; $200,000; to manufacture accessories; E. Aufiero, M. Aufiero, D. Aufiero.

Meebus Wheel Company, Boston, Mass.; $10,000; A. F. McGettrick, G. B. Ryan, F. E. Peaslee.

Wood Auto & Machine Company, Carrollton, Ky.; $10,000; E. A. Wood, J. P. Monnyhan, E. C. Smith, P. B. Gaines.

Marathon Automobile Company, Boston, Mass.; $20,000; W. S. Killars, A. L. Schoolcraft.

Modern Motor Car Company, Bowling Green, O.; $1000; W. P. Albey, Dale I. Ladd, R. E. Ladd, J. A. Walker, T. E. Moore.

Huffman Manufacturing Company, Youngstown, O.; $10,000; tire protectors for motor trucks, E. S. Walton, W. B. Hall, H. H. Stambaugh, Richard Garlick, John T. Harrington.

Pneumatic Gear Shift Company, Chicago; $25,000; George W. Killalea, E. O. Leowen, D. Krinsky.

Overland-Garford Sales Company, Cleveland, O.; $10,000; Malcolm Bridgman, Royal R. Scott, George F. Russell, Herbert O. Fitch, Charles M. Ackerman.

Dayton-Buick Company, Dayton, O.; $10,000; L. J. Haughey, Charles Abel, Joseph A. McKenny, Earl Simon, A. J. Smith.

Auto Drive & Parts Company, Indianapolis, Ind.; $100,000; John J. Kennedy, John J. Kelly, L. D. Buenting.

Auto Maintenance Company, Newark, N. J.; $10,000; Bernard A. Kelly, Catherine Kelly, John E. Anderson.

Uhrlandt Gas Generator Manufacturing Company, Columbus. O.; $100,000; Daniel N. Hyman, Oswell C. Phillips, Harry D. Shepard, Arthur Uhrlandt, Samuel Esswein.

Standard Purchasing Company, Inc., New York City; $10,000; Harry L. Cook, Harry F. Dexter, William H. Brooks.

Bremen Garage Company, Bremen, O.; $10,000; Albert E. Godfreyn, Edward A. Hufford, Arthur D. Hufford, Howard D. McCandlish, Milton L. Campfield.

Dallas Automobile Association, Dallas, Tex.; $5000; S. H. Breen, A. V. Lane, P. H. Keene.

Orleans Motor Company, Beaumont, Tex.; $7500; C. L. Smith, J. K. Smith, S. F. McMcConnico.

Eagle Manufacturing Company, Fort Wayne, Ind.; $50,000; automobile plows and machinery; H. F. Schnelker, W. J. Barth, Frederick Krejbaum, F. Green, Charles B. Orff.

Merchants Garage, Indianapolis, Ind.; $15,000; C. S. Shotwell, M. J. McGarr, H. H. Rice, W. A. Atkins, B. D. Christian, C. W. Dicks, C. B. Marshall.

G. B. Sales Corporation, New York City; $5000; Edward E. Reardon, Francis J. O'Grady, Irving C. W. Williams.

Consolidated Garage Company, San Jose, Cal.; $100,000; L. W. Bush and others.

D. & R. Storage Battery Company, Inc., Brooklyn, N. Y.; $100,000; A. F. Lucker, J. E. Reid, R. Drambourgh.

Findeisen & Kropf Manufacturing Company, New York City; $5000; F. Findeisen, O. F. Kropf, Charles A. Reigelman.

Demos Auto Repair & Garage Company, New York City; $3000; Demos Tsaconas, James E. Bradley, Gustave A. Gsell.

College Avenue Garage, Indianapolis, Ind.; $2000; F. H. Rupert, M. Rupert, H. A. Davis.

Murchison Garage & Machine Company, Benson, N. C.; $25,000; Alonzo Parrish and others.

Williams Automobile Transmission Company, Nashville, Tenn.; $100,000; P. H. Cain, H. H. Campbell, Thomas L. Herbert, Benjamin S. Williams.

Turin Garage & Supply Company, New York City; $5000; Anna Grabschield, John F. O'Neil, Frank H. Coyne.

Biggam Engineering Company, Buffalo, N. Y.; $200,000; to manufacture transmissions, clutches and other automobile parts; H. F. Biggam, N. D. McDowell, C. E. Buck.

Seaton Metal Products Company, Akron, O.; $20,000; to manufacture and deal in automobile accessories; L. J. Rothenbecker, Charles A. Seaton, W. O. Lee, C. F. Miller, Charles Scimeca.

MANUFACTURERS.

The Lauth-Juergens Motor Car Company, Fremont, O., maker of Lauth-Juergens trucks, has elected the following directors: J. Lauth and P. Lauth of Chicago; L. C. Worst, J. W. Worst, J. W. Forsyth, W. A. Lucas, L. W. Overmeyer and A. E. Culbert.

W. F. Evans of the McCue Company of Buffalo, N. Y., has made the announcement that Roger B. McMullen has been made general distributor of McCue wire wheels and axles, with headquarters at Chicago and Detroit.

The Lozier Motor Company, Detroit, maker of Lozier cars, believing that its business interests and patrons are better served by capable agents than by branch houses, has discontinued its branches in all the large cities, replacing them by well known and strong dealers. Harry S. Houpt, Inc., New York City; Albert W. Woodruff, Inc., Boston, and the Bigelow-Willey Motor Car Company, Philadelphia, are concerns which have just been organized to handle Lozier machines. The Bird-Sykes Company, Chicago, has taken the Lozier interests in that city, while the Bekins-Speer Motor Car Company, Los Angeles, Cal., which has represented the Lozier in that city the past three years, has also taken over the San Francisco territory.

The Falls Cities Motor Company, organized to take over the plant of the Ohio Falls Motor Company at New Albany, Ind., has been incorporated.

The Whitney Manufacturing Company, Hartford, Conn., has sold its 20-inch water tool grinder to the Taylor & Fenn Company, Hartford, and will now devote its entire attention to the manufacture of driving chains, keys and cutters for the Woodruff system of keying and hand-feed milling machines.

The A. O. Smith Company, Milwaukee, Wis., announces that because of the necessity for additional space for its frames and other pressed steel parts, the manufacture of the Smith multiple disc clutch will be transferred to the Universal Machinery Company of Milwaukee, which will hereafter make the clutch under the supervision of the Smith company.

The Splitdorf Electrical Company of New York, branch of the Splitdorf Electrical Company, Newark, N. J., maker of Splitdorf ignition devices, announces the opening of a factory branch at 210-212 North 13th street, Philadelphia, Penn., equipped to supply every form of Splitdorf product and to render an ignition service complete in every detail. C. C. Munson, a member of the Society of Automobile Engineers, is in charge of the branch.

The Peerless Motor Car Company of New York, factory branch of the Peerless Motor Car Company, Cleveland, O., maker of Peerless machines, has appointed Fred

Digitized by Google

H. Cozzens manager of the motor truck sales department.

The Keeton Motor Company, Detroit, maker of Keeton cars, has started work on the first of a series of additions to its plant. The first structure will be 100 feet in length, 60 feet in width and one story in height, of modern factory construction. It will be used for a testing plant. Others will be located on the present property of the company, while a still larger building than the present plant is contemplated on land lying between the Keeton factory and the Michigan Central railroad tracks.

The United States Tire Company has broken ground in Baum boulevard, Pittsburg, Penn., for a new service station for its solid motor tire department. A two-story and basement brick building will be erected. The company occupied its present building in October, 1911, and since then the business has grown to such volume that the new structure required will be the largest building devoted to the rubber tire trade in Pittsburg.

The Hexter Motor Truck Company of New York, which several months ago was acquired by John N. Willys, president of the Willys-Overland Company, Toledo, O., and several subsidiary concerns, has been legally authorized to change its name to the Willys Service Corporation. The change will become effective Aug. 11.

The Willard Storage Battery Company, Cleveland, O., maker of Willard storage batteries, has established a new branch office at 438-439 Indiana Pythian building, Indianapolis, Ind.

The White Company, Cleveland, O., maker of White pleasure and commercial vehicles, recently opened a new salesroom and service station at 216-218 North Broad

New Salesroom and Service Station of the White Company in Philadelphia.

street, Philadelphia. As is true of all the branch houses of the White company, provision is made to take care of every need of White users in the entire district served from Philadelphia. An accompanying illustration presents the new building.

The Economy Electric Company, Beaver, Penn., succeeding the Economy Manufacturing Company of that city, as maker of magnetos, generators and electric lighting equipment for automobiles and motor boats, has been chartered at Harrisburg, Penn., with a capital stock of $60,000. D. A. Anderson is among the incorporators.

The Howe Rubber Company, New Brunswick, N. J., proposes to expand its business and to manufacture automobile tires in connection with its other lines. It will expend $300,000 for new buildings and modern machinery, and the capital stock will be increased.

The Braunsdorf-Mueller Company, Elizabeth, N. J., maker of automobile tools, has enlarged its plant.

The Republic Rubber Company has moved its northwest branch from St. Paul, Minn., to Minneapolis, Minn., and it is now located at 13th and Hennepin streets.

The Federal Rubber Manufacturing Company, Milwaukee, Wis., has established a branch at 707 North Broad street, Philadelphia.

The Niagara Motors & Manufacturing Company, Dunkirk, N. Y., has purchased land and will erect a new plant.

The Auto Drive & Parts Company, Indianapolis, Ind., has been incorporated with a capital of $100,000. It will establish a factory at Indianapolis to manufacture drives and differentials invented by W. H. Harris.

The Huston Multiple Spring Company, Philadelphia, Penn., has established a new factory at 1342 Carpenter street. The springs made by the company are used in the automobile business.

Gauer, Blaylock & Co., 2 West Preston street, Baltimore, Md., has sold its automobile specialty business to Maurice V. Heatcote, who will continue the industry. The former company manufactures the Plugit tire filler and will devote its attention to this feature.

The Gibbs Machinery Company, Columbia, S. C., maker of trucks and automobiles, has erected a new factory. The company is also distributor for Packard and Chalmers cars.

John G. Anderson, owner of the Rock Hill Buggy Company, Rock Hill, S. C., is making arrangements to manufacture automobiles.

Home Motors Company, maker of Barker automobile motors, Los Angeles, Cal., is to have a new factory erected to provide additional room.

A. H. Wells & Co., Waterbury, Conn., manufacturer of seamless brass and copper tubing, recently opened offices at 1311 Dime Savings Bank building, Detroit. Charles C. Limbocker is its representative.

The Autocar Company, Ardmore, Penn., maker of Autocar delivery trucks, has instituted a new department, headed by C. A. Wells, formerly chief engineer of the Adams Express Company for 10 years. He is to be known as installation engineer and the duty of his department will be the thorough study of the delivery and transportation conditions of various concerns, with a view to determining the number and size of motor or horse drawn units that will give the most efficient service. Mr. Wells is a fellow of the American Institute of Electrical Engineers, a member of the American Society of Mechanical Engineers, member of the Society of Automobile Engineers, and other scientific societies.

The Metz Company, Waltham, Mass., maker of Metz cars, which recently won the Glidden trophy, has established a factory branch at 887 Boylston street, Boston. Carl Spiegelberg, who has been connected with the sales department of the Metz company since its inception, is manager of the new branch, in charge of the selling for the whole of New England.

The Chemical Rubber Company of Western Pennsylvania, with headquarters at Pittsburg, Penn., has secured a charter for manufacturing, buying, selling and leasing all articles used in the construction and operation of motor vehicles and in handling a product known as chemical rubber. The incorporators are William F. Baxmayer, William F. Vegeler, Robert A. Fulton, J. Grant Cumming and Harvey S. Fouse.

The Klumb Engine & Machine Company, Sheboygan, Wis., is erecting three new buildings, a machine shop, pattern works and power house, which will form the nucleus of its large gas engine and parts plant. The company was organized several months ago by Paul Klumb, for many years secretary of the Globe Foundry & Machine Company, and his three sons.

The Downing-Detroit Motor Car Company has completed arrangements for a factory site at Cleveland, O., where it will manufacture cyclecars.

The Federal Pressed Steel Company, Milwaukee, Wis., which will be an active factor in the motor car parts industry, and which is completing a large plant at Keefe avenue and North Pierce street, has increased its capital stock from $50,000 to $150,000 in preparation for the commencement of operations.

The Allen Motor Company, Fostoria, O., has taken over the plant of the Peabody Buggy Company and will use it for the manufacture of the new Allen cars. It was stated that the purchase price was $150,000 of the capital stock of the new company.

The Hampton Kerosene Carburetor Company, Inc., New York City, recently purchased the plant of the Motor Appliance Company of America, located at Perth Amboy, N. J. The company is erecting a large addition to the plant with a capacity of about 100 carburetors a day.

TRADE PERSONALS.

F. Richard, who resigned as general manager of the Only Car Company last December, has since completed plans for a new car, to be known as the Richard. He is at present engaged in building the machine, which will soon be in the market.

George S. Waite, recently resigned as manager of the New York branch of the Oakland Motor Car Company, Pontiac, Mich., maker of Oakland cars, to take charge of the sales department of the recently organized Grant Motor Car Company, Detroit, maker of Grant cars.

Garrett Cupp has joined the staff of the A. Elliott Ranney Company, New York City, where he will devote his time to the exploitation of the Hudson car, made by the Hudson Motor Car Company, Detroit.

Fred C. Harrington, formerly with the Peerless and Atterbury companies at Boston, has become manager of the truck department of Myer Abrams & Co., Boston, New England distributor of Lauth-Juergens motor trucks, made by the Lauth-Juergens Motor Car Company, Fremont, O. Mr. Harrington has had much success during his long experience in the truck industry.

Nelson C. Hyde, advertising manager of the E. B. Van Wagner Manufacturing Company and the Enterprise Metal Company, Syracuse, N. Y., has severed his connection with those concerns to become associate editor of the Syracuse Herald. S. P. Knisely, general manager, will assume Mr. Hyde's former duties.

Benjamin Smith, who has been prominent in connection with the New York City branches of the Packard, Thomas and other companies, has sailed to the Argentine Republic, where he will remain for several months, investigating the field with a view of establishing business relations.

A. M. Wolf, who helped materially in developing the Wolf mixer, a gasoline mixing device for insertion in the intake manifold, has disposed of his rights in the invention to the Approved Auto Specialties Company, New York City. He is now connected with the Twombly Motors Company, New York City, and will assist in developing the Twombly cyclecar.

Charles E. Stone, who has been closely identified with the development of the motor truck industry in New York City, has become associated with the Walter Motor Truck Company, and will assist in marketing the Walter and Walter-Latil trucks. He was formerly connected with the Peerless Motor Car Company of New York.

H. M. McCord, local agent at Toledo, O., for the Cadillac Motor Car Company, Detroit, maker of Cadillac cars, has disposed of his interests in that city in order to identify himself with a large Cadillac agency in another state.

The Kissel Motor Car Company, Hartford, Wis., maker of KisselKar pleasure and commercial lines, has secured the coveted honor of having one of its pleasure cars photographed in front of the service building at the Panama-Pacific exposition grounds in San Francisco. This is the first structure to be completed and there was considerable rivalry among the machines represented in the San Francisco district in an effort to secure the first photograph to be taken of it. The result is shown herewith.

Fred A. Law, until recently superintendent of the Selden Motor Vehicle Company, Rochester, N. Y., maker of Selden cars and trucks, has returned to Boston, where he is conducting a general supply agency. He was formerly identified with the Electric Vehicle Company, later the Columbia Motor Car Company, Hartford, Conn., having designed the first four-cylinder motor ever made by it.

F. George Walker, formerly connected with the sales force of the Oldsmobile and Garford companies, has joined the Hartford Auto Parts Company, Hartford, Conn., as sales manager and service engineer.

P. Hughes Moyer, formerly chief engineer of the Firestone Tire & Rubber Company's rim department at Akron, O., is now chief engineer of the General Rim Company, Cleveland, O., where a manufacturing plant and headquarters of the company have been established.

F. W. Sutton, formerly in charge of outside production of the American-La France Fire Engine Company, Elmira, N. Y., and the F. B. Stearns Company, Cleveland, O., has taken a similar position at the Detroit plant of the Continental Motor Manufacturing Company.

Adolphe C. Hoppe, until recently secretary and treasurer of the Smith-Hoppe Automobile Company, 215 Wisconsin street, Milwaukee, Wis., agent for Chalmers, R-C-H and Detroit electric cars, has organized the Hoppe-Hatter Motor Company, to handle the state agency for the Chalmers cars. Headquarters have been established in the Mulkern garage, 604 Downer avenue, until the new concern builds a garage and salesroom of its own. C. P. Hatter, secretary and treasurer of the company, is direct from the Chalmers factory at Detroit.

R. F. Ketchum, formerly manager of the Mack Motor Truck Company of Boston, distributor of Mack trucks, made by the International Motor Company, New York City, has been appointed manager of the Boston branch of the R. & L. Company, distributor of Garford trucks, made by the Garford Company, Elyria, O. P. C. Chrysler, the former manager, has returned to the home office at New York City.

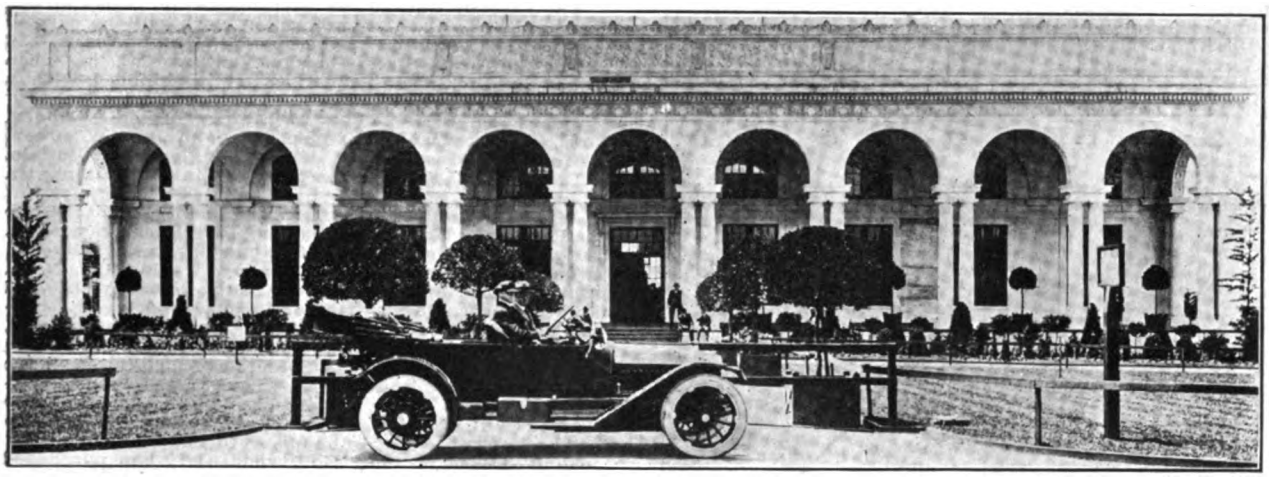
L. R. Speare, formerly president of the American Automobile Association, has disposed of his interest in the W. L. Russell Company, Boston agent for Regal and Haynes cars, and Mr. Russell is now conducting the business alone.

A. C. Weaver, formerly manager of the Lozier Sales Company, Cleveland, O., has become general manager of the company. A. W. Woodruff, formerly manager, has become manager of the Lozier branch at Boston.

Edward Hayes and A. J. Diefenderfer, for a long time connected with the New York branch of the Lozier Motor Company, distributor of Lozier cars, have gone into the used car business. These men, who have been identified with the automobile business for the last 12 years, have opened headquarters at 19 West 62nd street.

Harry M. Bronner, formerly manager of the Stoddard Dayton Company, and later of the Edwards Motor Car Company, New York City, who has been president of the Automobile Dealers' Association in that city since the first of the year, has resigned from the association on account of his going out of the automobile industry. The vice president, Arthur M. Day, of the Elliott Ranney Company, was elected to fill the vacancy. C. H. Larson of the Cutting-Larson Company, was chosen to the office of vice president. There being a vacancy on the board of directors caused by Mr. Bronner's resignation, R. H. Johnston of the White company was elected.

Arthur C. Brady, who with A. T. Brady formed the Brady-Murray Motors Corporation at New York City in March to handle the Chandler car, made by the Chandler Motor Car Company, Cleveland, O., has withdrawn from the concern. Both men were formerly connected with the factory of the International Motor Company at Allentown, Penn.



KisselKar in Front of the Service Building, Panama-Pacific Exposition Grounds, San Francisco—First Photograph of a Car at the Exposition.

E. J. Moon, president of the Moon Motor Car Company, St. Louis, Mo., maker of Moon cars, recently visited the principal Moon agencies in the West, his trip lasting five weeks. Among the cities visited were San Francisco, Los Angeles, Seattle, Ogden, Salt Lake City and Denver.

NEW CONCERNS.

William H. Baxter, who formerly conducted a garage at 163 Dwight street, Springfield, Mass., has taken possession of a new building at Oak and State streets. The garage is said to be the largest in the city. Mr. Baxter handles Paige-Detroit and Marion cars and Federal trucks.

The Standard Motor Car Company, Columbus, O., has been formed by H. J. Schwartz and Samuel J. Morris and salesrooms have been opened.

George A. Haws, New York City, founded the oil firm bearing his name in 1875, and since his death in 1888, the business has been conducted as a co-partnership without change of designation. From the first it has specialized in products of Pennsylvania crude, and when automobiles first began to be a factor of any real importance, this firm realized that thin, highly filtered oils of good viscosity would give better results than the very heavy steam cylinder stocks originally used. When Panhard oil first was placed in the market most automobile experts were skeptical, believing that it could not have sufficient body to lubricate. But as one after another was induced to try it, the conversions were speedy and permanent. Recently it was found necessary to erect a new building at 142-144 Front street, and this is the fifth or sixth which the firm has occupied, each succeeding one being larger than its predecessor; the result of the demands of a constantly growing business in the face of ever increasing competition. The latest structure, which is shown in an accompanying illustration, will be used for offices, packing, shipping and storing of stock. It is equipped with an up-to-date system of piping and pumps, which makes for an easier and speedier handling of the oil; can filling machinery and compounding vats. The

New Building of George A. Haws, Maker of Panhard Oils, at 142-144 Front Street, New York City.

managing partner of the firm is M. J. Martin, whose special care is for the mill and factory trade in general lubricating oils and greases of all kinds, while the automobile trade is in charge of Henry E. Haws.

The Humes Auto Company, Tarentum, Penn., contemplates the erection of an addition to its building, which will be used as an office and accessory supply house.

The D. K. S. Auto Supply Company, Cape May, N. J., is building a new garage which is nearly completed. The company handles Ford cars, made by the Ford Motor Company, Detroit.

The Hilmer Shull Auto & Supply Company, La Porte, Ia., is to erect a new garage.

The Chevrolet Motor Company has located salesrooms at 1651 Broadway, New York, and 1505 Bedford avenue, Brooklyn, N. Y. George H. Connor is in charge of the New York branch and Warren A. Suklon is manager of the Brooklyn office.

The Gauntlett Auto Sales Company, Toledo, O., Buick distributor for northwestern Ohio and southern Michigan, has moved into the three-story building at 1014-1016 Madison avenue, formerly occupied by the Packard agent. E. D. Gauntlett is the head of the firm, which was formed at Toledo during the spring automobile show, since which time its territory has been materially increased.

The Republic Rubber Company, Youngstown, O., maker of Republic tires, recently held a convention of branch managers, officials and department heads at the factory, during which the present sales situation and future prospects were discussed at length. An accompanying illustration presents the members of the party, which included the following: President T. L. Robinson, Vice President L. T. Peterson, General Sales Manager J. H. Kelly, Superintendent A. H. Harris, Assistant Superintendent W. D. Harris, Secretary C. F. Garrison, Treasurer M. I. Arms, Second Assistant Sales Manager H. W. Bixler, Advertising Manager Web Brown, Purchasing Agent N. W. Sayles, Auditor G. L. Stansbury, Manager O. M. Norby of the credit department, Manager E. N. Frase of the hose department, Manager Thomas Matchett

The Horton Motor Car Company, 706 East Pike street, Seattle, Wash., has secured the agency for McFarlan cars, made by the McFarlan Motor Car Company, Connersville, Ind.

L. C. Kirkham, Brooklyn, N. Y., has taken the agency for Pioneer cars and is located at 33 Grant square.

H. O. Harrison Company, Los Angeles, Cal., has taken the agency for Hudson cars in northern California, made by the Hudson Motor Car Company, Detroit.

Billings Garage, Topeka, Kan., has taken the agency for Chevrolet cars, made by the Chevrolet Motor Car Company, Detroit.

The National Motor Car Company, Pittsburg, Penn., has closed contracts for the agency for Davis cars, made by the G. W. Davis Motor Car Company, Richmond, Ind.

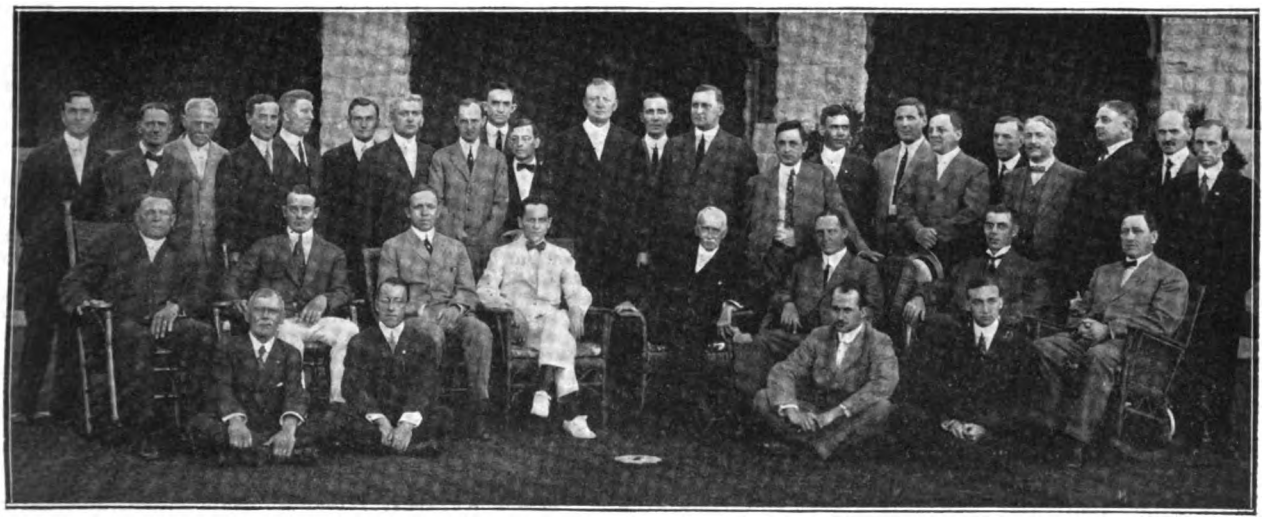
P. C. Smalley, Lincoln, Neb., has taken the agency in his territory for Premier cars, made by the Premier Motor Manufacturing Company, Indianapolis, Ind.

The Woodward Carriage Company, San Antonio, Tex., has taken the agency for Hupmobile cars, made by the Hupp Motor Car Company, Detroit.

Druet & Page Company, Inc., 1890 Broadway, New York City, has taken the agency for the Palmer-Singer cars, made by the Palmer & Singer Manufacturing Company, Long Island City, N. Y.

The Salt Lake Hardware Company, Salt Lake City, Utah, has taken the agency for Fisk tires, made by the Fisk Rubber Company, Chicopee Falls, Mass.

The H. J. Koehler Sporting Goods Company, New York City, one of the largest distributors of low priced cars in the East, will sever its connection with the Hupp Motor Car Company, Detroit, maker of Hupmobiles, at the close of its yearly contract and will handle instead the new Grant car, made by the Grant Motor Car Company, Detroit, in which H. J. Koehler himself is said to have taken a substantial interest. The Koehler commercial



Officials, Branch Managers and Department Heads at Recent Convention of the Republic Rubber Company's Factory in Youngstown, O.

of the belting department, Engineer C. E. Rice, Paymaster W. Dunn, Shipping Clerk W. D. Norris, T. J. Mell, Inventor of the Staggard tread, and the following branch representatives: H. K. Wick and John C. Wick, Youngstown, O.; M. E. Murray, San Francisco; C. W. Hardin, New York City; J. W. Maguire, Chicago; W. S. Carleton, Boston; B. C. Swinehart, Philadelphia; J. C. Kearne, Detroit; B. F. Morris, Buffalo; G. A. Sohl, Atlanta; J. Palmer, Chicago; F. G. Hill and H. W. Pratt, New York; F. W. Osmun, Minneapolis; G. M. Hoffman, St. Louis; G. N. Talcott, Cleveland.

NEW AGENCIES.

E. Pryce Mitchell, proprietor of the El Camino Real Garage, Santa Barbara, Cal., has taken the agency for Pierce-Arrow cars, made by the Pierce-Arrow Motor Car Company, Buffalo, N. Y.

C. R. Parker of the Parker garage, 113 Harrison street, Davenport, Ia., has taken the agency for Peerless cars, made by the Peerless Motor Car Company, Cleveland, O.

The Gerlinger Motor Car Company, 901 East Pike street, Seattle, Wash., has taken the agency for the Herreshoff cars, made by the Herreshoff Motor Company, Detroit, and also for the Federal, Menominee and Standard trucks.

Oscar Lear, Columbus, O., has taken the agency for Buick cars, made by the Buick Motor Company, Flint, Mich.

Gilbert A. Wehr, Baltimore, Md., has taken the agency for Reo cars, made by the Reo Motor Car Company, Detroit. It is located at 128 West North avenue.

car, which is made in the company's own factory at Newark, N. J., will continue to play an important part in the concern's activities, while it is probable that another car listing around $750 will be added to the line.

A. S. French of the French Auto Company, Vancouver, B. C., has taken the agency for Napier, Havers, Overland and KisselKar machines.

Anderson, Spencer & Co., White Sulphur Springs, Mont., has secured the agency for Studebaker cars, made by the Studebaker Corporation, Detroit.

The Haynes Motor Car Company, Minneapolis, Minn., has secured the agency for R-C-H cars, made by the R-C-H Corporation, Detroit, for Minnesota and northwestern Wisconsin.

The Nebraska Auto Specialty Company, Omaha, Neb., has been incorporated as selling agent for the Gray pneumatic gearshift and air starter. The company is composed of Omaha men, headed by Manager Koller of the Gordon Fireproof & Storage Company.

Charles E. Riess & Co., 1896 Broadway, New York City, has completed arrangements for taking over the agency for the Hupmobile cars in New York City, that agency having been relinquished by the H. J. Koehler Sporting Goods Company at the conclusion of its contract.

The New Era Auto Company, Baltimore, Md., has taken the agency for the Chevrolet car, made by the Chevrolet Motor Car Company, Detroit.

The E. V. Stratton Company, Albany, N. Y., as a result of its exceptional 1913 business in Hudson cars, made by the Hudson Motor Car Company, Detroit, has had its 1914 territory extended to include all of New York State west to and including Montgomery and Franklin counties, and south to part of Ulster and Duchess; five counties in Vermont and three in Massachusetts, including the city of Springfield. John S. Harrington, formerly of

Digitized by Google

Worcester and Boston, has been secured by the Stratton company to handle its Springfield district on Hudson cars and Stewart trucks.

The Henderson Motor Car Company, Indianapolis, Ind., maker of Henderson cars, has appointed the following agents for its product: Henderson Motors Company, Toronto, Can.; Crossem & Searer, Joliet, Ill.; J. W. Gronewold, Golden, Ill.; Lane Hardware Company, Robinson, Ill.; Jackson Motor Car Company, Nashville, Tenn.; Dunham & Long, Westboro, Mo.; American Sales Company, Louisville, Ky.; T. M. Bowler, Sheyboygan, Wis.

The Kissel Motor Car Company, Hartford, Wis., announces the following agents for KisselKar trucks and pleasure vehicles: J. T. Gentry, San Bernardino, Cal.; Glenn A. Calkins, Riverside, Cal.; Fred Duvall, Pomona, Cal.; George Gilmore, El Centro, Cal.; Joseph S. Peoples, Petaluma, Cal.; Benjamin L. Brundage, Bakersfield, Cal.; P. J. Weisel & Co., Anaheim, Cal.; J. C. Phelan, Fresno, Cal.; Pacific KisselKar branch, Oakland, Cal.; West End Garage, Santa Ana, Cal.; E. B. Jones, Hornell, N. Y.; Empire garage, Middletown, N. Y.; Flato & Allen, Kingsville, Tex.; Oliver-Nussbaum-Scharf Company, Grosbeck, Tex.; W. S. Mattox, Greenville, Tex.; Lyscio & Walker, Joplin, Mo.; Nemic & Biscenius, St. Cloud, Minn.; J. W. Bush, Oakes, N. D.; New Island City Garage, Galveston, Tex.; Reno Nevada Company, Reno, Nev.; William Daly, Paterson, N. J.; Thomas Plimley, Victoria, B. C.; Kentucky KisselKar Sales Company, Lexington, Ky.; Waterloo KisselKar Company, Waterloo, Ia.; Douglass Motor Car Company, Douglass, Ariz.

NEW GARAGES.

Nathan Harris, 268 Alexander street, Rochester, N. Y., will build a one-story garage to cost $5000.

Andrew Kraska, Stanislaus and Mill streets, Buffalo, N. Y., will build a two-story garage to cost $2500.

The F. P. Auto Construction Company, Inc., Brooklyn, N. Y., of which Frank K. Fairchild, 178 South Portland avenue, is president, has received bids for a one-story garage to cost $7000.

Olden & Tucker, Chrisman, Ill., has completed plans for a one-story garage to cost $10,000.

Edmund B. Gilchrist, Philadelphia, is preparing plans for a two-story stone and rough cast garage to be erected at Chestnut Hill.

Harry P. Schneider, Old York road, Philadelphia, is estimating on plans and specifications for a large public garage to be built at Sixth and Oak Lane avenues, for E. B. Hedley.

James C. Pettee, 1698 Lake avenue, Cleveland, O., has awarded the contract for the erection of a one-story garage.

Porter & McLeod, 366 Ash street, Brockton, Mass., has obtained the contract to build a one-story garage for F. E. Shaw, 326 West Elm street.

Herman Monk, 1902 North Pennsylvania street, Indianapolis, Ind., will build a one-story garage.

Mrs. B. G. DuPont, Wilmington, Del., has plans under way for a two-story garage to cost $5000.

M. E. Connell, Scranton, Penn., is planning to build a two-story garage in the fall.

Louis T. Dougherty, Plainfield, N. J., will erect a 2.5-story garage to cost $6000.

A. Halsey, Little Falls, N. J., will build at Newark, N. J., a two-story garage to cost $2000.

Stephen Flam, 411 Francis avenue, Schenectady, N. Y., will soon start work on the construction of his new garage.

Edward J. Scully & Sons, 895 Steinway avenue, Long Island City, N. Y., has completed plans for a two-story garage to cost $6000.

Herman Avleis, 210 Lewis avenue, Brooklyn, N. Y., has completed plans for a two-story garage and storage house to cost $9000.

The Havemeyer Realty Company, Havemeyer building, Church street, New York City, will alter its present two-story garage to the extent of $3000.

F. G. Bartels, 6441 West 33rd street, Berwyn, Ill., will erect a one-story garage at a cost of $4000.

Theodore Steuben, 3217 Lincoln avenue, Chicago, is preparing plans for a one-story garage.

The Turner Construction Company, 312 Prudential building, Buffalo, N. Y., has obtained the contract to erect a one-story garage for the Jacob Dold Packing Company, 740 William street.

Albert Hesbol, 953 Belmont avenue, Chicago, has obtained the contract to erect a one-story garage for George F. Lovdall.

Niederpruen Building Company, 1170 Jefferson street, Buffalo, N. Y., is to make alterations to the garage of L. Newman, to cost $1900.

E. L. Smith, West Concord, Minn., is planning the erection of a one-story garage in the near future.

R. Kamp, Ashland, Wis., has plans under way for a one-story garage and machine shop, to cost $5000.

J. J. Hefferman, Woonsocket, R. I., is preparing plans for a one-story garage.

J. Schoonmaker, 124 West Chestnut street, Kingston, N. Y., is taking bids for a $6000 garage.

L. F. Urbain, 20 North Jackson boulevard, Chicago, is preparing plans for a modern garage to be erected soon.

E. D. Dean, York, Neb., has awarded the contract for a one-story garage to cost $5000. The brick work is now being laid and will be completed shortly.

J. E. McDonald, Detroit, will build a one-story brick garage, work to be started as soon as the plans are completed.

F. M. Hills of the Hercules Buggy Company, Evansville, Ind., has awarded the contract for the erection of a large garage in that city.

J. E. & A. L. Pennock, Land Title building, Philadelphia, has secured the contract to build a two-story garage for Robert T. Moore, at Haddonfield, N. J.

Flynn & Tonin, 74 Pekin street, Providence, R. I., has secured the contract to build a one-story garage for Walter S. Ingraham.

George Deiker, 703 Genesee street, Utica, N. Y., has let the contract for the erection of a two-story garage, store and apartment building, to cost $25,000.

G. Schneider, 2441 Wentworth avenue, Chicago, has obtained the contract to build a garage and store building for H. N. Bruns, at a cost of $6500.

Leslie Mathews, Benson, Minn., has completed plans for a one-story garage.

A. B. Coryelle, 721 Lawton avenue, Detroit, will build a garage in the near future.

Dtuckenmilles, Stackhouse & Williams, Land Title building, Philadelphia, is preparing plans for four garages to be built at Merion, Penn.

George K. Renninger, 1232 Cotton street, Reading, Penn., will build a 2.5-story garage.

John Owens, 7215 Germantown avenue, Philadelphia, is preparing plans and specifications for repairs to the garage of Samuel Herbner, at 318 West Highland avenue, Chestnut Hill, Penn.

T. S. McVaugn has obtained the contract for the erection of a residence and garage on Rising Sun lane, Philadelphia, for Charles R. Brady.

Thomas M. Leeds is estimating on plans for a garage to be erected at Villanova, Penn., for H. L. Walker.

Charles M. Wells, Philadelphia, is preparing plans for a three-story brick garage to be erected at Morton, Penn.

D. N. Postlewaite, Columbus, O., has awarded the contract to Nichol & Carn, 400 Arcade building, for the erection of a one-story garage to cost $1000.

Miss Alice Butler and Miss Mae Butler, 2134 Linton avenue, Cincinnati, O., have awarded the contract for the erection of a two-story garage to cost $7000.

The Standard Oil Company of Ohio, East 55th street, Cleveland, O., has awarded the contract for a one-story garage.

John Hoos & Son, 135 West Camden street, Baltimore, Md., has awarded the contract for a two-story garage, to cost $1500.

W. S. Taqua, Jenkintown, Penn., has given the contract for the building of a one-story garage to cost $1500.

Mary E. Hunt, Thurlow terrace, Albany, N. Y., has let the contract for a garage and stable to be one story high and to cost $4500.

The National Sugar Refining Company of New Jersey, Long Island City, N. Y., is to build a one-story brick and concrete garage.

Thomas Kennedy, 221 South Main street, Rochester, Minn., is taking bids for a 1.5-story garage, which will cost $8000.

Downs & Eads, 712 New York Life building, Minneapolis, Minn., is preparing plans for a residence and garage, at a cost of $10,000.

Alfred Pulisbury, 116 East 22nd street, Minneapolis, Minn., will build a two-story garage at Stevens and 22nd street to accommodate four cars.

The Pier Auto Company, Richmond Center, Wis., is to build a one-story garage at an outlay of $11,000.

S. Linderoth & Co., 5844 Elizabeth street, Chicago, has prepared plans for a one-story garage and store building to cost $18,000.

Joseph E. Tilt, 512 West Huron street, Chicago, is to expend $125,000 for the erection of a three-story residence and one-story garage, for which he has plans.

S. J. Pyanowski, 2219 South Whipple street, Chicago, has received bids for a one-story garage to cost $7000.

L. Novy & Son, 3223 West 22nd street, Berwyn, Ill., has prepared plans for a one-story garage to cost $4000.

Henry Bristol and Jacob Simon, 26 Court street, Brooklyn, N. Y., are taking sub-bids for a one-story garage to be erected at a cost of $10,000.

Daniel A. Mossman, 821 Fourth avenue, Huntington, W. Va., will build a three-story store and garage building at a cost of $15,000.

Ridde McCoach, Philadelphia, has let the contract to the George Kessler Contracting Company for the erection of a one-story brick garage. The cost is $7500.

New York Telephone Company, New York City, is to build a two-story garage at Long Island City, to cost $45,000.

The Joseph Bird Company, Philadelphia, has obtained the contract for the erection of a public garage to be built on Spring street, between 10th and 11th streets.

Moore McQuigg, 724 Elinore street, Kalamazoo, Mich., has secured the contract to erect a one-story garage to cost $7000. On its completion it will be leased by the Cadillac Motor Company.

Digitized by Google

Westley Fagle, 600 Clay street, Laporte, Ind., has let the contract for an addition to his garage, to cost $4000.

W. C. Leiter, Harvey's Lake, Penn., has awarded the contract for a two-story garage to cost $7000.

J. C. Thompson, Eau Claire, Wis., will build a one-story garage at a cost of $12,000, the contract for which has been awarded.

George F. Pawling, Philadelphia, has secured the contract of L. J. Bergdoll for the erection of a three-story terra cotta and brick automobile sales building at 250-254 North Broad street. The building will cost $65,000.

George Thomas, Nanticoke, Penn., has given the contract for a two-story garage to cost $3000.

Roy A. Hunt, 4916 Wallingford avenue, Pittsburg, Penn., has given the contract for a two-story residence and garage, to cost $75,000.

Kahn & Greenburg and Murray White have signed leases with the Peerless Motor Company, the International Truck Company and the Garford Truck Company, Philadelphia, Penn., for the three large automobile warehouses and salesrooms which are being built on the south side of Chestnut street, west of 23rd street. The leases are all for 10 years. The building at 2304-2308 Chestnut street and 106-108 South 23rd street, containing about 40,000 square feet, has been leased to the International Truck Company; 2310-2312 Chestnut street, to the Garford Truck Company, and 2314-2318 Chestnut street and 105-107 South 24th street, containing about 35,000 square feet, will be occupied by the Peerless Motor Company. The buildings are being constructed of fireproof material and will be equipped with freight elevators. The tenants will furnish the salesroom with terrazzo floors, panelled walls and decorated ceilings.

W. H. Dwikee, Providence, R. I., has let the contract to Hale & Doyle, 27 Exchange street, for the erection of a 2.5-story residence and one-story garage, to cost $17,000.

L. J. Stevison, Webb City, Mo., is planning to build a one-story garage.

J. W. Ayler, Carthage, Mo., will completely rebuild his garage. The alterations will cost $10,000.

William F. Goodrich, 310 Sun building, Detroit, is preparing plans for alterations and additions to a garage at Bloomfield Hills, Mich.

R. L. Mills, 212 Lafayette avenue, N. E., Grand Rapids, Mich., has started plans for the erection of a garage in the near future.

Dr. William E. Tyson, 499 Seminole avenue, Detroit, has received bids for the erection of a private garage.

Snyder Bros., Mt. Carmel, Penn., is excavating preparatory to building a modern garage.

Clarence E. Burlingame, 75 Westminster street, Providence, R. I., is preparing plans for a 1.5-story garage to be built at Edgewood, R. I.

Alfred Popik, American National Bank building, Newark, N. J., is planning to build a two-story garage to cost $10,000.

Norman D. Scheffreen, Fremont building, Boston, Mass., will build a two-story garage to cost $18,000, at Roxbury, Mass.

Benjamin L. Jones, Ellicott square, Buffalo, N. Y., is to build a garage at Derby, N. Y.

C. S. Millington, Herkimer, N. Y., has received estimates for a one-story garage, to cost $2500.

E. Levene, 124 North Third street, Philadelphia, is securing estimates for a two-story brick garage to be erected at Diamond and Croskey streets.

F. Porshet, 33 Stillson street, Rochester, N. Y., will built a two-story garage.

Andrew Rasmussen, 111 West Broadway, Council Bluffs, Ia., will build a two-story rear addition to his garage.

Mrs. F. Faulke, 126 North Sixth street, Cedar Rapids, Ia., has plans under way for a two-story garage and hall building, to cost $30,000.

Louis Trammontin, 68 Champlain street, Detroit, will build a one-story garage and factory building.

L. D. Krause, 1401 Hamilton street, Allentown, Penn., will build a three-story garage and apartment building.

The First National Bank, McKees Rocks, Penn., will erect a one-story garage to cost $5000.

Warren Unger, Shamokin, Penn., is having plans prepared for a three-story garage and store building. It will cost $25,000.

The D. A. Calhoun Contracting Company, 17 Madison avenue, New York City, will take sub-bids in the fall for building four garages.

The McKeon Realty Company, 191 Ninth avenue, New York City, will build a one-story garage to cost $30,000.

H. J. Clark, 2831 Forest drive, Des Moines, Ia., has awarded the contract for a two-story garage and office building to cost $20,000.

The Henry Elias Brewing Company, 403 East 54th street, New York City, has given the contract for alterations and additions to its garage to cost $20,000.

H. Pierce, 48 West Bridge street, Oswego, N. Y., has plans for a two-story garage and office building.

J. C. Bowditch, 16th street, Boston, has invited bids for a one-story garage.

Marshall E. Van Arman, 909 State Life building, Indianapolis, Ind., will build a one-story garage, for which he has plans.

The Norman Construction Company, Essex building, Newark, N. J., is to build a one-story garage to cost $7000.

The Central Manufacturing Company, Chicago, is to erect a four-story garage warehouse and paint factory at the northwest corner of 37th and Iron streets. The contract for the construction work has been awarded and the building has been leased to John Lucas & Co., 1521 North Wabash avenue, Chicago.

L. Dalton, Elmwood, Ill., has received estimates for the erection of a two-story garage and hall building, 50 by 75 feet.

The Felt & Tarrant Manufacturing Company, 1717 North Paulina street, Chicago, is having plans prepared for the erection of one-story garage and warehouse.

The Times Square Auto Company, 1710 Broadway, New York City, has plans under way for a two-story addition to its garage, to cost $70,000.

Richard A. Ruedebusch, Fred J. Lang and Anton Lang, Mayville, Wis., have organized the Badger Auto Company, with $20,000 capital, to erect and operate a garage.

Charles Kopp, 250 Dove street, Albany, N. Y., will build a one-story garage.

HAYNES' SALES MANAGER.

George H. Strout Has Had Wide Experience in the Automobile Industry.

The Haynes Automobile Company, Kokomo, Ind., maker of Haynes cars, enjoys the distinction of having two men connected with its organizaiton that were born in Portland. One is Elwood Haynes, builder of what is held to be America's first gasoline car, who first saw the light of day at Portland, Ind., while the other is Sales Manager George H. Strout, whose birthplace is Portland, Me. Mr. Strout was recently manager of sales and advertising for the Cole Motor Car Company, Indianapolis, maker of Cole machines, but resigned to take a similar position with the Haynes factory.

George H. Strout, Sales Manager, Haynes Automobile Company.

He was born Dec. 26, 1870, and he was fitted for college in Boston. He graduated from Swarthmore College in Pennsylvania and after teaching for a year at the Harvard preparatory schools in West Newton, Mass., he entered upon a business career. After two years in the bicycle business in Boston he went to New York to become branch sales manager of the Monarch Cycle Manufacturing Company, Chicago. With the advent of the American Bicycle Company in 1899 the Monarch company was included in the general plan of consolidation and Mr. Strout resigned, going to the Alaskan gold fields, where he remained for two years. In 1903 he entered the motor car business, forming the Western Automobile Company, St. Paul, Minn., which he sold in 1905, going to Hartford, Conn., to take charge of sales of the Columbia electric and gasoline cars. He next became identified with the Apperson Bros. Automobile Company, Kokomo, Ind., and later went to New York for a short time in the interest of a Detroit truck concern. His return to Indiana was to join the Cole company, with which firm he remained until his recent connection with the Haynes organization.

REMOVED TO FRAMINGHAM.

Standard Woven Fabric Company Finds Worcester Plant Too Small for Its Needs.

To meet the decided increase in the demand for Multibestos brake lining, standard woven belting and solid multiple hose fabrics, the Standard Woven Fabric Company, which for many years has been located at Worcester, Mass., has occupied its new factory recently built and equipped at Framingham, Mass.

This step was made necessary because the facilities at Worcester had become inadequate to meet the growth and expansion of the business. In the new factory at Framingham is incorporated every modern feature tending to promote quality and economical production, which embraces everything in the way of woven fabrics.

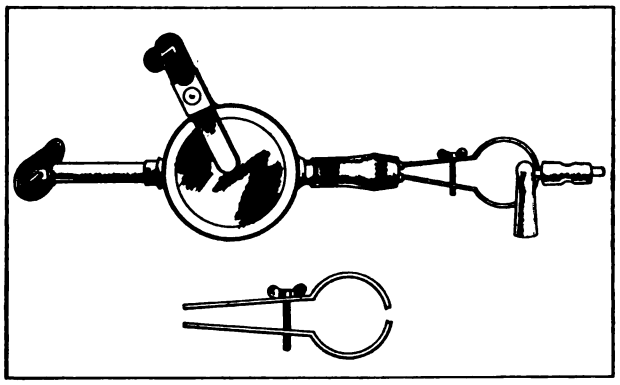
MECHANICAL NOTES FOR GARAGEMEN.

IN THE overhaul of a car it is possible that a new exhaust pipe may be needed because of the old member having been damaged or rusted



Device for Grinding in Petcocks with a Breast Drill.

out. While copper or brass pipes, especially if annealed, are bent easily, the shaping of steel or larger tubes is more difficult. In fitting a new exhaust pipe it is desirable to eliminate kinks, which are not only unsightly, but obstruct the flow of the gases. Copper pipes up to 1.5 inches may be bent cold if suitable blocks and levers are utilized, but steel tubes generally require heating and are more troublesome to handle.

A method of bending is shown in an accompanying illustration, from which it will be seen that the pipe is passed through the hole in the block, while the copper loop forms a fulcrum for the lever. The leverage obtained enables short bends to be made without kinking, and is secured by gradually moving the block, so that the pressure is not exerted continually at any one particular point during the operation.

Before commencing to bend the pipe, a wire templet of the shape required should be made. If the tube be of copper it should be filled with resin, run in while hot and allowed to cool. Three articles are required, as will be noted in the drawing; first, a hard wood block with a hole slightly larger than the diameter of the pipe; second, a loop made from an old piece of copper pipe, and third, a stout pinchbar of convenient length.

In bending steel tubing the same process is utilized, but the pipe is filled with sand, and the block should be of metal. The pipe is heated at the point at which the bend is desired, and is cooled off slightly on the side which forms an inner radius of the circle, to prevent kinking. A small hole should be drilled in the pipe in any convenient position to allow for the expansion of the sand when heated. Otherwise the contents are likely to be blown out during the bending process. Before fitting the pipe to the part it should be tested and inspected for flaws.

MAKING A TIRE PROTECTOR.

If one is so unfortunate as to be caught with a small blow-out and without an inside or outside patch these can be made with some cloth and friction tape. Take a piece of cloth several times larger than the opening in the shoe and on one side lay strips of tape, much in the same manner as a surgeon plasters a cut. Next fold the cloth with the tape inside and lay a few strips of tape on the side that goes next to the inside of the casing. In replacing the inner tube be careful that the patch does not slip. If the shoe is cleaned carefully the tape will adhere. Partially inflate the shoe. Prepare another patch slightly larger than the opening in the tire, but tape both sides. Press the patch firmly against the blow-out and then wind tape around the shoe and felloe, taking care to have each wrap very snug. Inflate in the usual manner. This repair if properly executed will endure for some time and will at least serve to get one home.

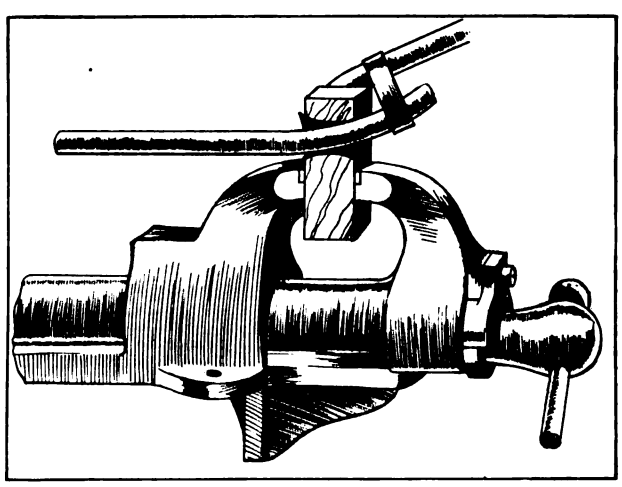
FITTING NEW PISTON RINGS.

In fitting new piston rings to an old cylinder, the walls of which are smooth, it is an excellent plan to stone the rings before placing them on the piston, if they are simply of the machined type. It is an easy matter to create a glass like surface by polishing the periphery of the ring on an oil stone, using plenty of lubricant. A slight pressure should be exerted and the ring turned from time to time to insure a smooth, even surface.

GRINDING IN PETCOCKS.

Sometimes petcocks in the fuel line leak unless the valve portion is driven in its seat. This will generally prevent leakage, but makes it difficult to utilize the petcock, which often becomes frozen, resulting in damage when moving the lever.

While grinding in the valve will usually cure the trouble, considerable time is required when the work is performed by hand. In an accompanying illustration is presented a suggestion for using a breast drill and facilitating the work.



Suggestion for Bending Copper and Steel Pipes of Large Diameter Without Kinking.

The materials are not expensive and com-

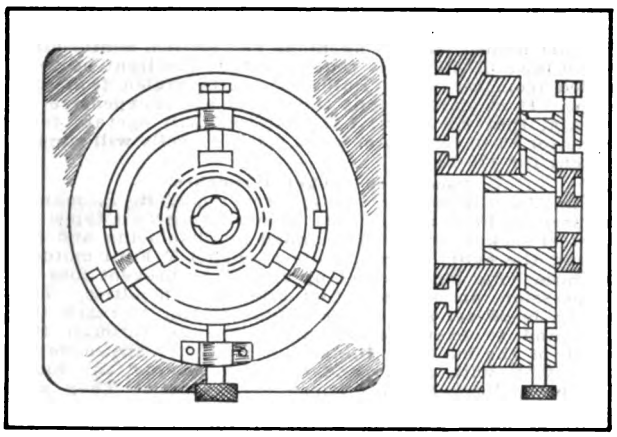
prise two pieces of sheet steel about five inches by .75 by .125. The ends of these are shaped to fit the chuck of the drill as shown. When being



A Gear Pinion Jig for Keyway Cutting Which May Be Utilized for Any Desired Number of Slots.

ground in the valve plug of the petcock is retained in the auxiliary jaws by a thumb screw, which clamps the part securely. By rotating the handle of the breast drill the valve member may be ground in easily. The direction of rotation should be reversed from time to time.

JIG FOR KEYWAY CUTTING.

A jig designed for holding gear pinions when cutting keyways, and which can be changed to cut one, two, three, four or any desired number of slots which may be required in the pinion, is shown in an accompanying illustration. An elevation view is presented at the right. The view at the left is of the T slotted base, which is bolted on the machine table of a slotting or keyway cutting machine.

The base is bored out in the centre, and a second jig is machined to drop into this bored-out section. The upper piece has three bosses cast onto it, through which set screws are taken serving to hold the pinion. Between the end of the set screws and the pinion, however, are three hardened steel pieces which are machined to the outside radius of the pinion which is being cut. Equidistant and tapered slots are cut in any required number around the holder, which has the cast lugs on it, and a spring controlled register pin runs through a boss cast on the main base. The pinion is held as shown by the dotted line. The spring controlled key drops into one of the slots and the keyway is cut, and any other slots may be brought into register for the purpose of cutting a second, third, fourth keyway, etc.

When this jig is made up, and suitable distance pieces have been made, it will be found a great convenience where a large number of pinions are continually being slotted, as the tool can quickly be adjusted to different sized wheels. The various distance pieces and blocks need not be made up at first. They will accumulate as different work is done, until a complete set is obtained.

REMETALLING OF BEARINGS.

The remetalling of bearings requires care if satisfactory results are to be secured. In an accompanying illustration is presented a suggestion for a jig which is said to prevent blow holes and to provide a smooth bearing surface. It comprises a stiff iron plate of suitable dimensions and drilled to receive the stud member. The clamp, which is shaped to leave a space for pouring the metal between the inner side of the bearing and the tube, is secured to the stud as shown.

Between the edges of the brasses are placed graphited tin strips secured by a clip. To prevent leakage of the molten metal from the bottom a piece of asbestos packing is utilized. This arrangement permits of metalling a pair of brasses at a time. If care be exercised in heating the brasses the old metal may be removed without injuring the tinned surfaces. It is important that there be a sufficient number of holes in the shell for securing the new lining in addition to the tinning.

A HARDENING HINT.

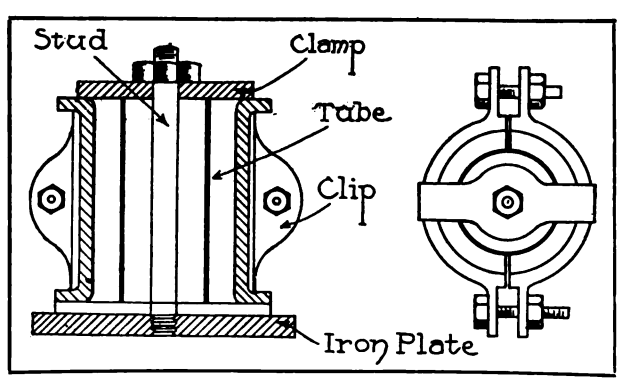
Brittleness of small cutting tools, drills, taps, etc., may be prevented and economy effected by plunging the part into a cake of soap or wax after hardening when being cooled.

CARE OF SHELLAC.

Shellac is useful in the garage and as it dries up very quickly it should not be exposed to the air. Place it in a bottle and fit a wooden stopper. The latter may be utilized for smearing the liquid when its service is required.

CUP GREASE MIXTURE.

The practise of the manufacturer to provide grease cups for parts subject to friction is becoming more general. While makers of lubricants produce grease especially adapted for the



Suggestion for a Jig for Metalling Brasses for Big End Bearings.

parts, an excellent compound may be made by mixing a small quantity of powdered graphite with the grease.

Digitized by Google

DESIRABLE ACCESSORIES FOR THE DEALER.

Electrene Fire Gun.

The Western Electric Company, 17 Battery Place, New York City, and with branches in numerous cities, is manufacturing the Electrene fire gun, a fire extinguishing device which is constructed in three styles. That designed especially for service with the motor car, garage, motor boat, etc., is the lightest and of one quart capacity. Lightness and ease of operation are emphasized with the Electrene, and to use it the nozzle is turned and the stream directed at the base of the blaze. It is stated that the stream can be directed accurately by one hand, and that one person can operate two extinguishers at once. The fluid is forced out in a fine spray by compressed air and it is maintained that its efficiency is not impaired by age, heat or cold, and that it will not conduct electricity. Although the fluid will extinguish burning oils, gasoline, etc., it is claimed that it will not injure the most delicate of fabrics nor leave any trace of its presence. The container is sturdily constructed, but light. The company also manufactures sizes adapted to shops, etc.

Newcomb Carburetor.

The Newcomb carburetor is manufactured by the Holtzer-Cabot Electric Company, Chicago and Boston, and attracted attention in motoring circles by its performance in the recent fuel economy test of a Franklin car when the machine travelled 83.5 miles to a gallon of gasoline. The Newcomb is of the float feed type, having a metering mechanism, which measures the quantities of fuel and air in service. The carburetor operates on a constant vacuum and automatically enlarges the effective air and fuel openings in proportion to each other and to the demand of the motor. The metering mechanism is located in the vaporizing chamber, comprising a hollow plunger surrounding a pipe at the top of which the fuel nozzle is located. A fuel controlling needle is fixed to the upper part of the plunger, near the bottom edge of which are a number of small holes, these distributing the fuel after it has issued from the main fuel measuring orifice. These holes are arranged to register with an equal number of narrow air slots cut in the plunger tube chamber. The plunger is seated on a regulating collar, the function of which is to withdraw the fuel needle from its closed position by raising the plunger without uncovering the air slots. Normally, the fuel nozzle is nearly closed, thus the opening of the fuel port is given a lead with respect to the air ports, slightly enriching the mixture for slow operation. When air is drawn through the carburetor the plunger lifts in proportion and the needle in the nozzle raises at the same time, supplying the fuel required to provide a correct mixture. The higher the plunger is lifted the larger the air and fuel openings. The effective areas of the air and fuel ports are so proportioned that it is held that the mixture is correct for every air flow. A homogeneous and dry mixture is claimed for the Newcomb, one making for economy of fuel and the elimination of deposits in the cylinder or smoke in the exhaust. A starting device is incorporated. The vaporizer is also water jacketed.

J-M Mobilite Electric Lamp.

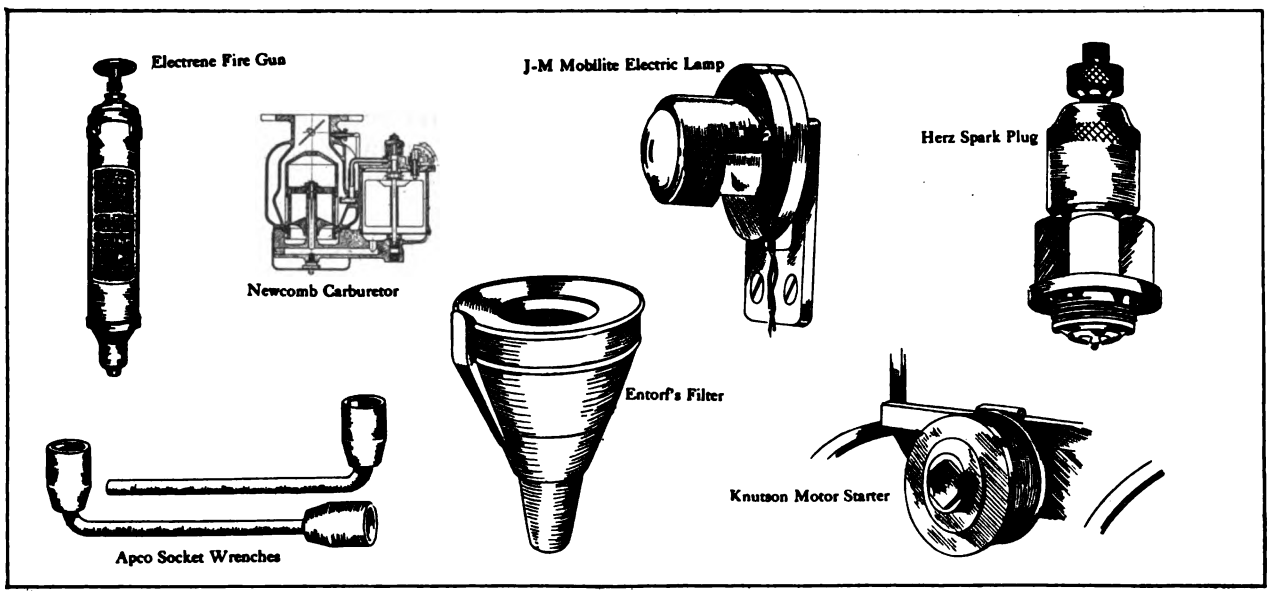
The J-M Mobilite electric lamp is marketed by the H. W. Johns-Manville Company, New York City, and comprises a vulcanized rubber socket fitted to a powerful lens and reflector. The bulb utilized is a special tungsten and it is stated that the light is unusually brilliant. The lamps are made in three styles, the No. 1 being designed for mounting in the dash, while the No. 2 is an automobile type and a rear signal, it having the conventional red semaphore and white light for the license plate. The third design is the dash. A complete equipment of these lamps consists of two set-in, one dash and a tail member. The last named has an ingenious key switch, conforming to the laws of all states requiring that the light be controlled from the rear. Bulbs cannot be stolen from the lamps. It is claimed that the lights are inexpensive to operate; that six No. 6 J-M batteries will operate four lights for 80 to 120 hours, while six No. 8 cells will supply current for 420 hours.

Apco Ford Socket Wrenches.

The Auto Parts Company, Providence, R. I., manufacturer of Ford accessories, is marketing two types of all steel socket wrenches designed for displacing and replacing the cylinder head bolts of model T Ford motors. As these bolts must be set up snugly to prevent loss of compression, an ordinary tool presents difficulties. The wrench is off-set and it is a simple matter to reach the bolts and to exert considerable leverage through the length of the handle. The socket wrenches are made in two styles, with single and double ends, and the tools may be utilized for a number of purposes. They are moderately priced and guaranteed.

Knutson Motor Starter.

The Automatic Devices Company, Galesburg, Ill., is manufacturing the Knutson motor starter, which is of the mechanical type and fitted to the extension of the crankshaft, replacing the usual starting handle. A pressure of the foot on a pedal conveniently located releases a spring, which unwinds slowly at first to prevent sudden stresses. This action is controlled by a brake band and a positive lock. Upon the crankshaft rotating the speed is automatically increased. The spring is rewound by the rotation of the crankshaft. It is held that the device is mechanically perfect, has few parts, is simple in its operation and that it can be easily attached to any type of gasoline vehicle.



Herz Bougie Mercedes Spark Plug.

Herz & Co., 295 Lafayette street, New York City, is manufacturing the Herz Bougie Mercedes spark plug, which has as one of its several features a double blue enamel stone, a construction which it is claimed makes it unbreakable and decidedly efficient. The balance of the components are sturdy and the electrodes are constructed of a material which eliminates burning and sooting. The plug is liberally guaranteed. The company also manufactures the Herz magneto.

Entorf's Water Separating Filter.

Entorf's water separating filter is manufactured by the Entorf Filter Company, Amboy, Ill., and is designed for service with gasoline, kerosene and other similar oils. It resembles a common fuel, but near the top is a fine screen, which retains the oil, thus forming a film and preventing the passage of any water in the fluid. Above the screen is an opening into a drain duct or vent on the outside of the funnel, which the water can enter. Below the first screen is a second member, and another opens into the drain duct. A mechanical device is incorporated at the bottom of the filter, so arranged that the oil will pass through into the spout, while the heavier substance will flow to a reservoir and be discharged outside.

Norisko Wheel and Ignition Lock.

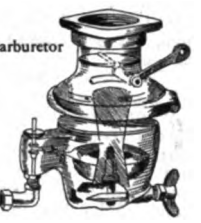
The Norisko steering gear and ignition lock is marketed by the C. J. Rogers Manufacturing Company, Abbott building, Philadelphia. It comprises a sturdy shackle permanently secured to the steering post by a unique screw arrangement. It is claimed that the lock cannot be

Digitized by Google

Norisko Lock

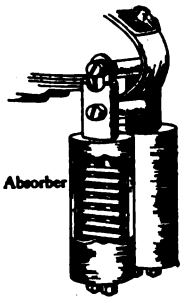
Burn-Boston Battery

Narco Tire Cut Filler

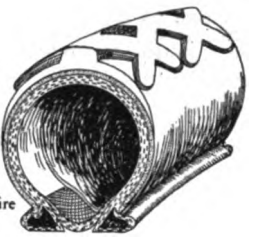


Bowers Carburetor

Hoyt Pocket Voltmeter



J-M Shock Absorber



Mohawk Non-Skid Tire

tampered with short of drilling. Within the shackle is a plunger which, when pushed in part way by the thumb, breaks the ignition circuit. A further movement engages the plunger with a slot in the steering post proper, locking the gear after the wheels have been turned at an acute angle. This prevents the car being operated or towed. The Norisko locks automatically and is provided with a Corbin lock and key. The device is nickel plated.

Narco Tire Cut Filler.

Narco tire cut filler is the product of the National Rubber Company, St. Louis, Mo., and comes in a compressible tube having a convenient nozzle. The contents of the tube are a special preparation which it is stated will weld itself to the walls of a cut in a casing, becoming integral with the rubber and providing a union so perfect that no road abuse will remove it. The Waite Auto Supply Company, Providence, R. I., is Rhode Island distributor.

Burn-Boston Battery.

The Burn-Boston battery, made by the Burn-Boston Battery Company, 19 Doane street, Boston, differs from the conventional dry cell in that a liquid is utilized for an electrolyte. It is square shaped, occupies relatively the same space as a dry cell, and is not affected by heat, cold or moisture. The cell is securely sealed and it is claimed that it will not deteriorate when out of service for a considerable period. The connections are unusually durable, not being affected by vibration, and the zinc terminal comprises a special wire. The leading features of the Burn-Boston are its long life and efficiency. The voltage is standard.

Bowers Carburetor.

The Bowers model G carburetor is marketed by the Gilbert Manufacturing Company, New Haven, Conn., and is simply constructed in that there is but one adjustment to be made, that controlling the fuel. Variable climatic changes are compensated for in the Bowers by the use of an annular brass disc surrounding the central or fixed air inlet, which consists of a venturi shaped tube. The disc contains a plurality of three or more correctly proportioned air ports which admit an additional supply of air and which are controlled progressively to the requirements of the motor by variable tensioned phosphor bronze reeds. These are held to be self-cleaning and not to alter in tension. The adjustment of the Bowers is by a conveniently located needle valve. It is made in standard sizes, is moderately priced, and economy of fuel as well as maximum motor efficiency are emphasized with the construction.

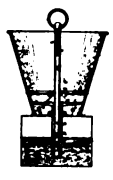
Hoyt Pocket Voltmeter.

The storage battery, utilized for lighting or ignition, requires proper care and the cells should be tested from time to time to note their condition. The Hoyt Electrical Instrument Works, Penacook, N. H., maker of current indicating devices, is marketing a voltmeter of the pocket type which is guaranteed to be accurate and which is of the coil type. The new meter, which comes in a sturdy case, averages about 40 ohms a volt, is dead beat in action, slightly larger than a watch and is moderately priced. Being designed particularly for service with storage batteries it forms a valuable addition to the owner's equipment.

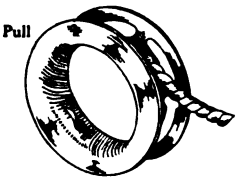
J. M. Shock Absorber.

The J. M. Shock absorber, marketed by the J. M. Shock Absorber Company, Inc., 210 South 17th street, Philadelphia, is the invention of Jacquet Maurel, a French mechanical engineer, who claims to have solved the problem of applying a helical spring principle to the laminated spring of the motor car. Except on a car having a full elliptic spring, the car spring is attached at its end by a shackle to allow for elongation of the laminated member. In the J. M. this shackle is replaced by its equivalent, a bronze head, which acts as a guide for the helical bolts of the absorber and a bearing for the hanger bolt. Attached to the bronze head is a tube in which is confined the helical spring. This tube allows the spring to be compressed along a true plane at right angles to the car spring, thus obtaining its maximum efficiency. The tubes and springs are of four different diameters, which permit of attachment of the J. M. to any size of machine.

Presto Ford Cigar Lighter



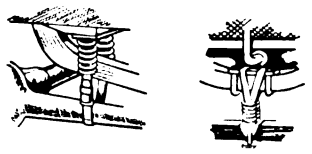
Nospill Funnel



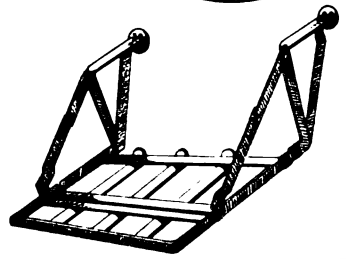
Pillsbury Auto Pull

Dover Radiator Filler

Stafford Combination Tail Lamp



Buckeye Ford Shock Absorbers



Standard Ford Trunk Rack

Digitized by Google

The J. M. is designed to increase the efficiency of the regular spring, operate as effectually over smooth as rough roads, and save the tires and components of the vehicle from vibration and shocks. It is made in single and twin types, for any make of car, also a Ford special, and is guaranteed.

Nospill Funnel.

The F. L. Hoaglin Manufacturing Company, Waupaca, Wis., is producing the Nospill funnel, so termed because it eliminates overflowing of the gasoline or liquid used. In addition there is a device which shows the rise of the liquid and means are provided for stopping its passage to the container. When the fuel attains a desired height this is denoted by the central indicator, and further flow is instantly stopped by lifting the funnel ring, which closes a spherical brass valve in the lower portion of the discharge tube. The funnel is of enamelled lead covered steel and polished brass, is of five gallons capacity and a filter is incorporated.

Stafford Combination Tail Light.

The Stafford combination tail lamp and illuminated number is produced by the Stafford Manufacturing Company, 1475 Michigan avenue, Chicago, and was designed to meet requirements of various state laws for rear numbers that can be read as well in the night as in daylight. The lamp includes the usual red semaphore, but the illumination of the numbers is by another electric light within the casing, causing the figures and letters to stand out so as to be perfectly legible at a greater distance than is required by law. All lamps are fitted with an Edison base socket of the latest type and the device is constructed of the best of material. It is finished in black with nickel listed as slightly extra. The Stafford lamp is moderately priced. The company also manufactures a lamp with a top reflector, having an adjustable bracket and adapted to retain any state license plate.

Dover Radiator Filler.

The Dover Stamping & Manufacturing Company, Cambridge, Mass., is producing a handy article for the garage in the nature of a radiator filler. It is a six-quart container and in addition to a serviceable handle, has a hooded spout, which permits of replenishing the supply of the radiator without the usual spilling. It is constructed of heavy galvanized steel and a brass strainer is provided, preventing the entrance of foreign elements into the cooler. The Dover radiator filler is moderately priced.

Pillsbury Auto Pull.

The Pillsbury Auto Pull is manufactured by the Pillsbury Sales Company, Minneapolis, Minn., and is a device for fitting over the rear hub cap of the wheel of the motor car to enable extricating the machine from deep sand, etc., which would ordinarily slip the wheels. The device comprises a pulley to which is attached a long rope having a hook at one end. The hook is attached to a stake in the ground, some distance from the car, and upon starting the machine the rope and pulley arrangement pulls the vehicle as far as the stake.

Standard Ford Trunk Rack.

The Connecticut Steel & Wire Company, Hartford, Conn., is manufacturing a high grade trunk rack especially designed for model T Ford cars. It is made of the best .875 by .1875-inch flat steel with hangers one by .25 inch and the finish is black enamel baked on. The rack is secured to the car by means of four sturdy bolts and is braced in such manner as to be sufficiently strong to support any weight in proportion to the size of the car. It is moderately priced.

Mohawk Non-Skid Tire.

The Mohawk non-skid tread tire is the product of the Mohawk Rubber Company, Akron, O., and it is claimed that maximum traction is afforded by the suction cups in the centre of the tread, also that the heavy broad ribs take the wear and prevent side slip. It is stated that the best of Sea Island cotton and Para gum are utilized in the construction and that the workmanship is first class in every respect. The New York City branch of the company is at 1864 Broadway.

Presto Ford Cigar Lighter.

The Metal Specialties Manufacturing Company, 738 West Monroe street, Chicago, is marketing the Presto Ford cigar lighter, which is designed especially for the model T Ford cars, and current is taken from the magneto of the machine. It is constructed to withstand the voltages developed by the flywheel generator, and the electricity heats a platinum wire contained in the lighter, enabling the lighting of a cigar. The device comes with 10 feet of silken cord and can be easily installed by attaching one of the leads to the magneto terminal and the second to metal or ground. By pressing a button in the top of the handle of the lighter, the circuit is closed, heating the platinum. All metal parts of the device are thoroughly insulated and the instrument is not only handy, permitting as it does lighting a cigar in a gale of wind, but it makes for safety. It is moderately priced.

Buckeye Ford Shock Absorbers.

The Central Brass & Fixture Company, Springfield, O., announces a new set of shock absorbers designed for Ford automobiles. There are three in a set, one being utilized in the front and two at the rear of the machine. The principle of the Buckeye absorber is the absorption of the recoil of the spring, it being accomplished by a spring coil and strap arrangement. The springs are fully oiled and tempered and the absorber fitted to the front of the chassis is secured by a clip device, easily attached and locked. The rear members are attached as readily. It is claimed that the Buckeye will prevent excessive compression as well as undue recoil of the springs. The set is inexpensive and may be fitted by the most inexperienced.

RECENT PATENTS.

Vehicle Wheel, John Sinnott, Philadelphia. A vehicle wheel comprising a hub, a rim, two sets of shoes, one set being arranged alternately to the other, and springs between the fixed and movable members, also springs in the spoke housings.

Lubricator, Alexis R. Pribil, Detroit, assignor to the Penberthy Injector Company of the same city. A lubricating cup for explosive motors, having a sight chamber and a ball valve, also means for regulating, starting and stopping the flow of oil.

Battery, Charles F. Burgess and Carl Hambuechen, Madison, Wis. A primary battery having a zinc container with bottom soldered in place, a tar paper disc over said bottom and a porous paper lining, said lining having its upper edge trimmed to lie directly in contact with said container.

Exhaust Purifier, Paul Gerli and Guido Blenio, New York City. A device for purifying the exhaust of an internal combustion motor, comprising a tank located below the muffler and divided by transverse partitions into two end compartments, these constituting inlet and outlet members The chambers are connected by tubes and another compartment is provided with an agitating device.

Vehicle Tire, Le Roy Hess, Joliet, and Adelbert S. Burdick, Lockport, Ill., assignors to Samuel J. Drew, Joliet, Ill. A shoe for pneumatic tires comprising an inner wall lapping strips of fabric with V shaped ends, united by strips of cementing material, suitable breaker, complemental beads and a rubber tread.

Lathe Dog, Ralph H. West, Cleveland, O. A lathe dog having an opening for the work, a tail piece and a threaded opening for a set screw at substantial right angles to the opening for the work. The body is provided with an integral set screw guard which bridges and overlies the set screw opening.

Vehicle Tire, Howard M. Ambler, Philadelphia. A pneumatic tire having a flanged tread and a solid tire mounted upon flanges which fit those on the casing.

Engine Starter, Ernst A. Bostrom, Atlanta, Ga. The combination of a shaft and crank, an intermediate coupling and means for preventing the reverse direction of crank.

MAYO JOINS MAGUIRE COMPANY.

H. C. Mayo, one of the most popular automobile salesmen of Boston, and for many years associated with the Peerless company of that city, has joined the sales organization of the J. W. Maguire Company, agent for Pierce-Arrow cars, made by the Pierce-Arrow Motor Car Company, Buffalo, N. Y. Mr. Mayo will travel through New Hampshire and Vermont.

WHITNEY IS SOUTHERN MANAGER.

H. C. Whitney, for several years general southern representative of the American Locomotive Company, maker of Alco cars, and more recently connected with the branch of the Locomobile Company of America, Bridgeport, Conn., maker of Locomobile machines, at Atlanta, Ga., has taken the position of southern district manager of the Lozier Motor Company, Detroit, maker of Lozier cars. Mr. Whitney is well known in the South, where he is best remembered for his famous automobile trip through the southern states, when he opened up 21 new agencies and did over $1,000,000 in business. As district manager for the Lozier company Mr. Whitney will make his headquarters at New Orleans.

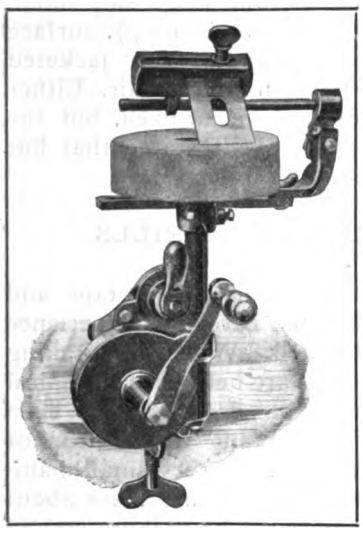
NEW CHANDLER DISTRIBUTORS.

The Chandler Motor Car Company, Cleveland, O., has designated the following new distributors of Chandler cars: Chandler Sales Company, Cincinnati, O.; Overland Automobile Company, Denver, Col.; Joseph DeBona, Eagle Pass, Tex.; W. C. DeForrest & Son, Sharon, Penn.; Chandler Motor Car Company, Baltimore, Md.; American Motor Sales Company, Burlington, Ia.; R. W. Tierney, Fall River, Mass.; Guy W. Lawrence, Gardiner, Me.; W. W. Kenble, Greenwich, Conn.; Burke Bros. Company, Jersey City, N. J.; Van's Garage, Kingston, N. Y.; A. V. Hageman, Lorain, O.; Smith & Johnson, Manchester, N. H.; Spencer, Wilkie Motor Company, Morristown, N. J.; Banker Auto Company, Muscatine, Ia.; Van Motor Company, Newburg, N. Y.; F. E. Lockwood & Co., Norwalk, Conn.; Nathaniel Fink, Paterson, N. J.; William P. Young, Pottstown, Penn.; Stryker & Stryker, Red Bank, N. Y.; J. C. Henry, Somerville, N. J.; N. L. Otis, South Bend, Ind.; William A. Clark, Stamford, Conn.; E. Neumann & Sons, Stapleton, N. Y.; H. L. Fink, Westfield, N. J.; J. Ralph Seidner, Youngstown, O.

Digitized by Google

GARAGE AND REPAIR SHOP EQUIPMENT.

ARBOR presses may be employed for a number of purposes in the repair shop, such as straightening rear axles, for example. Edwin E. Bartlett, 330 A street, Boston, manufactures a wide variety of Greenerd arbor presses and in an accompanying illustration is shown the No. 7, one of the largest types produced by the concern.



Luther Grinder Attachment.

It takes a diameter of 36 inches and has a leverage of 250:1, and a pressure of 25 tons is obtained easily. No change in principle or design has been made from the well known No. 5 Greenerd machine except in size and capacity. When the lever is in the position indicated in the illustration, the rack or ram may easily be moved up or down by means of the hand wheel.

The knee is operated by the crank shown, revolving a screw through a pair of miter gears. This screw runs in a nut in the base. The design is such that the knee can be lowered to its extreme position without the screw reaching the floor, making it possible to place the press in any position without cutting the floor for the screw. The knee is held to the frame by two studs and nuts, the nuts being adjusted and locked so that the knee can be moved easily. The pitch of the elevating screw is such that these nuts do not require tightening to hold the knee under the heaviest of pressure.

The No. 15 Greenerd is especially adaptable to automobile repair shops and has advantages over the No. 3.5, 4 and 5 sizes in that the capacity is 36 inches between the uprights and the opening under the revolving plate is 10 inches. One man can obtain seven tons, while two can secure 10 tons pressure. The maker is issuing a circular on arbor presses, which will be mailed upon request.

LUTHER HONING ATTACHMENT.

The Luther Grinding Manufacturing Company, Milwaukee, Wis., is marketing a new plane bit and chisel honing attachment for its machines of the Best Maide type. The parts to be sharpened, etc., are held rigidly in a clamp, which is moved back and forth across the face of the wheel, insuring a perfect angle and a smooth edge. The wheel is run in a horizontal plane. The Best Maide types of machines have a double grit wheel, the face side of the wheel on which the hone runs being extra fine for finishing purposes. This same attachment can be utilized on the round face of the wheel and the machine clamped into a horizontal position, as shown in the illustration.

A PATTERN HINT.

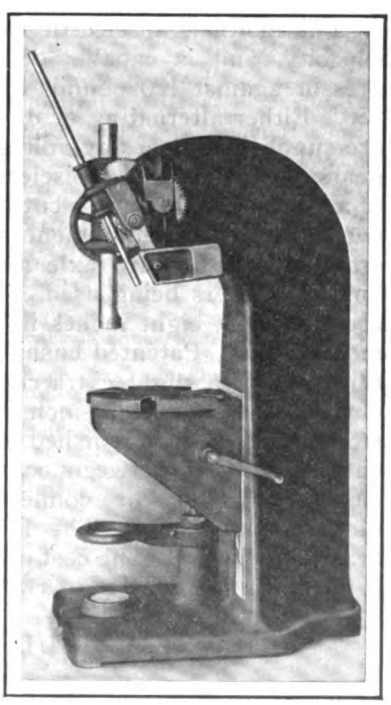
All metal patterns should be thoroughly cleaned with a stiff brush, then coated with a brush having plenty of beeswax in it and dipped in powdered plumbago. Brush the pattern well and it will draw much better and a smoother casting will be the result.

IMPROPER USE OF REAMERS.

A reamer should never be employed to ream out a pipe of any kind. The scale inside the tubing caused by the flux used in welding or brazing is as hard as glass, and no reamer can be made hard enough to cut it.

ACKLIN BREATHER-OILER.

Some types of old motors are not fitted with breathers to relieve pressure in the crankcase, which results in a loss of lubricant. The Acklin Stamping Company, Toledo, O., is manufacturing a combination oiler and breather, the main body of which is of No. 16 gauge sheet steel. The metal is drawn to a depth of five inches and the bottom is necked so that there is one inch diameter at the lower half of the shell, while the upper part is 2.5 inches in diameter. A bead is thrown up around the bottom, and the flange is permanently secured in position by it and by the metal in the end of the shell being expanded back against it on the other side, making a rugged joint.



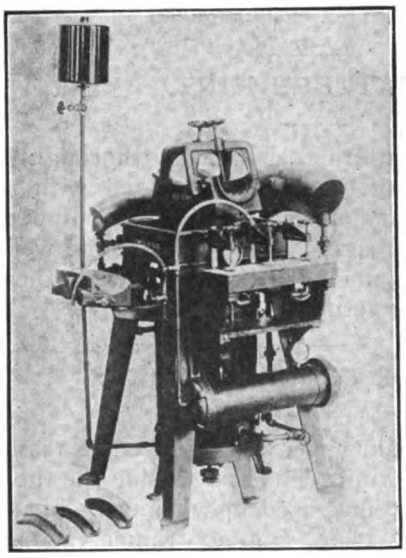
Bartlett Greenerd Arbor Press.

The cap is constructed of a lighter steel and is held on the breather by means of a bead which fits over a similar member on the main piece. There are openings in both the cap and the breather and these members may be adjusted as desired. The cap is easily removable.

Digitized by Google

BRUNNER AIR COMPRESSOR.

The Brunner Manufacturing Company, Utica, N. Y., maker of Parker and other forms of air compressors, is producing what is termed the No. 50 portable outfit, which is high grade in every particular and designed to meet every requirement of service in public or private garages. It is a complete unit, as will be noted by an accompanying illustration, and is easily operated, a socket being fitted to a convenient circuit.



Hill-Stage Vulcanizer.

The compressor has a capacity of one cubic foot of free air a minute, and the utilization of a safety valve permits of any desired pressure. The tank is of extra heavy steel, tested to 250 pounds, and is 30 inches long and 12 in diameter. Its capacity is 15 gallons (two cubic feet) and it is claimed that it will inflate two flat tires and harden up from eight to 12 according to their size. When the container is filled it will inflate one 36 by 4.5 casing to 90 pounds, also three to six ordinary sizes before it is necessary to start the motor.

The motor is an electric unit, .25 horsepower capacity, and is capable of starting the compressor against 120 pounds and increasing it to 150. Either alternating or direct current motors are supplied, and of any voltage and cycle. The gears are held to be noiseless through the use of a rawhide pinion and a cut cast iron spur. The truck carrying the equipment is substantially constructed, the forward axle revolving on a king bolt, no casters being used. The forward wheels are cast iron, eight inches in diameter, the rear members 10. Patented cushion tired wheels are furnished at a slight extra cost. Each outfit includes 12 feet of .1875-inch rubber tubing, one stop cock, a 2.5-inch polished brass gauge, a globe valve controller between compressor and tank, electric cord and a tire connection. The finish is gloss black enamel. The fittings are polished brass and copper. The cost of operation is stated to be from one-quarter to two cents an hour.

HILL-STAGE VULCANIZER.

The Hill-Stage Company, Anderson, Ind., is marketing what is termed its No. 4 A outfit, which combines compactness and capacity, and it is moderately priced. The unit is wholly self-contained and has a jacketed boiler of large size equipped with either a gas or gasoline burner. It has a capacity of four casings, three tubes, one motorcycle and two bicycle tires at one heat. It is adapted for casings up to four inches, all sizes of tubes and any motorcycle tire.

The equipment includes one tread mold for casings, two inside molds, one large side mold, bead molds (both clincher and Dunlop), surface heating motorcycle molds and steam jacketed bicycle molds, also expansion tank for air. Either air bags or solid pads may be utilized, but the former are recommended. It is stated that but three sizes of air bags are necessary.

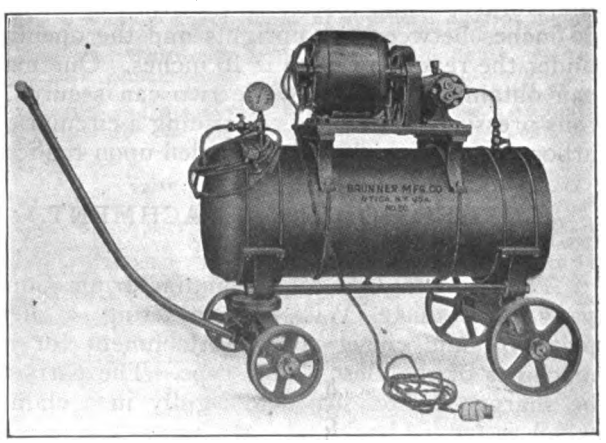
HARDENING SMALL DRILLS.

Hardening and tempering small taps and drills requires considerable care and experience if perfect work be obtained. When undertaking the work the drills or taps are held with the spiral or thread immersed in lead which has been brought to the melting point in an iron or earthenware crucible. Pieces of very small diameter should be left in the molten metal for about 60 seconds. They should then be withdrawn and plunged into cold water. If the bath be of the correct temperature no lead will adhere to the work when they are removed. After chilling the tools should be cleaned and tempered.

The most convenient method is to lay them on a sheet of old iron held over a charcoal and gas fire. The tray should be rocked a little during the process in order that the pieces may be heated uniformly. When they attain a dark straw or gold color they should be again plunged in water. It is held that by the above treatment the degree of heat is strictly limited, and it is impossible to burn the edges as with an open fire.

BUFFALO AIR BRUSH.

The F. J. Leder Company, Buffalo, N. Y., is manufacturing the Buffalo air brush, which is a small automatic hand device designed for spraying or atomizing paint, oil, gasoline or similar substances. It is operated by compressed air and



Brunner Portable Air Compressor Outfit Utilizing Electricity for Driving the Compressor.

may be fitted with a flexible air hose if desired. The spray may be controlled as required. Special outfits are made for painting bodies, etc.

Digitized by Google

SUGGESTED FAN ATTACHMENT

It Provides for Two Speeds and Neutral and Is Controlled from Seat.

It is customary to remove the fan belt in extreme cold weather and to replace it when needed, the change being made in accordance with the judgment of the operator. Many times the temperature will rise rapidly or fall suddenly in the winter, resulting in the motor overheating or becoming too cool to obtain maximum efficiency from the fuel. A suggestion for a two-speed fan appeared recently in The Commercial Motor, an English motoring print, which is reproduced, and although primarily intended for commercial cars, could be adapted to pleasure vehicles.

An accompanying sketch shows the device with the components lettered. It comprises, in addition to the details set forth, a connection from the lever member to the dash whereby the driver can utilize either of the two speeds or render the fan inoperative. The materials employed were obtained from the scrap heap with one exception, the rubber rollers.

The device comprises a casing of about 4.5 inches in diameter, which was constructed of a four-inch pipe having the threads turned off. This is free to revolve independently from the shaft. Inside of the casing is a perfectly plain wheel which is keyed to the shaft and is 2.5 inches in diameter, also four rubber rollers which are mounted on pins protruding from the disc member. The last named carries the pulley, from which power is transmitted to the fan, and is so mounted that it is free to turn and slide through a limited distance along the shaft.

The rubber rollers were made from three-gallon ammonia flask stoppers. These are of slightly greater diameter than the difference between the radii of the inside of the case and the wheel. In assembling it is necessary to force them into position and by this means they remain under compression, which prevents slipping. Small holes are burned or punched through the rollers, and brass tubing of suitable diameter and length is forced into position to act as bearings.

On the plate of the disc and on the side of the wheel are screws with the heads protruding, so that when the disc is shifted toward the casing the heads interfere, and the pulley wheel is driven at the same speed as the shaft. The shifting of the disc is accomplished by means of the lever which protrudes through the floorboard. Pressure on the brake member, which can be located in either an "in" or "out" position, causes the casing to come to a standstill, and the disc being moved toward the timing gear casing as far as possible, the pulley wheel is caused to revolve at approximately half the speed of the shaft. When the brake is released and the improvised dog clutch is disengaged, the casing revolves in the opposite direction to the shaft, due to the rollers remaining idle. This obtains the two speeds referred to. The rollers are the most delicate part of the device. When replacement becomes advisable, however, it is only necessary to loosen the collar member, which serves to retain the casing on the shaft.

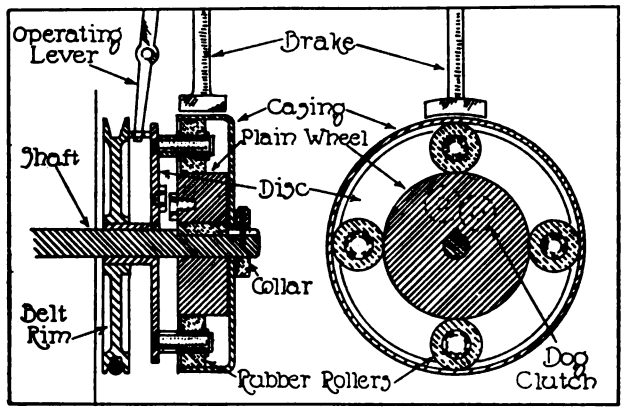
FOUR VS. SIX-CYLINDER CARS.

President of Mercer Automobile Company Discusses Present Situation.

It will be remembered that about a year ago it was freely predicted that the season of 1913 was to be a six-cylinder year. The machines on view at the various shows last winter failed to bear out this assertion entirely, although the number of new sixes was noticeably large. The following discussion of the subject is from the pen of William T. White, president and general manager of the Mercer Automobile Company, Trenton, N. J., maker of Mercer cars:

It is our confident belief that the popularity of six-cylinder cars is gradually on the wane, and that before many months four-cylinder cars will again be in greater favor than they ever were before. This belief is borne out by the fact that buyers of the current season are extremely painstaking in determining the weight, fuel consumption, tire mileage and general upkeep expense of the car they contemplate buying.

This condition is quite largely the result of the rapid



An Epicycle Gear for Fan, Permitting Two Speeds as Well as a Neutral Position.

rise in the price of gasoline. The average motorist can very easily see the folly of using a six-cylinder car and getting only about seven or eight miles to the gallon of gasoline, when he can secure a high grade medium weight four-cylinder car that will average 12 to 14 miles to a gallon of fuel. Coupled with the excessive use of gasoline in a six-cylinder car he has tire and general upkeep expense almost out of reason, owing to the extra weight.

It has always been claimed for the six-cylinder car that it is superior to the four because of its efficiency and flexibility. This may be true so far as the comparison with some four-cylinder cars is concerned, but the Mercer Automobile Company has been very successful in its manufacture of four-cylinder cars, and anyone who will take the trouble to investigate will find that it would be very difficult indeed to find a six-cylinder motor capable of showing greater efficiency, flexibility, silence, or smoother operation than the Mercer motor. As for speed, it is a well known fact that no speed records of any consequence have ever been made with anything but four-cylinder cars.

Europe has always been a fairly good barometer of the trend of automobile conditions, and it has been observed that already the French and English makers are reverting to fours after several years of very strenuous six-cylinder activity. Over on the other side the four-cylinder motor is unquestionably now recognized as the standard, and the six is slowly but surely being rejected.

It is true there will always be six-cylinder advocates, but the present outlook indicates most clearly that four-cylinder cars are again coming into popular favor.

It will be noticed that the trend of design in both Europe and the United States is toward the motor that has a bore not larger than 4.5 inches and is capable of very high speed, some attaining 3000 revolutions a minute, and developing much greater horsepower than the old motors of larger bore or the newer motors having six cylinders.

TRUCK SERVICE IN PUBLIC GARAGE.

Outlining Methods of Systematic Attention to Machines by Which the Average Garageman May Build Up Successful Commercial Vehicle Business.

WHILE in most cities garages make a specialty of caring for pleasure cars, it is nevertheless true that the rapid increase in the use of commercial motor vehicles has directed attention to the care of such transports. Numerous service station proprietors who have given consideration to the future possibilities have made preparation to handle this business. While many concerns utilizing motor trucks maintain their own private garages, the matter of having their vehicles inspected systematically and regularly is of decided moment. It is recognized that with expert care and inspection the machines are kept in better condition and the liability of costly breakdowns on the road is minimized.

The result has been that garage owners who have entered this field have been given a lucrative trade, both in the matter of storage and of weekly or monthly inspections and repairs. As in the case of maintaining pleasure cars, it is necessary that some sort of system be adopted to record the various transactions connected with service to commercial machines, for many of the problems relating to expense and keeping accurate account of the time spent upon each job are identical.

CONTRACT WITH OWNER.

The Eastern Garage & Service Company, in consideration of ..... dollars, hereby agrees to provide a weekly inspection, and to keep in perfect running order for one year from date, exclusive of the expense of new parts, the .... ton ..... truck, kept at the garage of said service company, and owned by and operated under the direction of .....

The system installed should be as simple as practical results will allow. It is assumed that the garage will render service and care for trucks other than those for which it may have the agency, in order that its business may be developed to the maximum point. With the Eastern Garage & Service Company, which name is assumed for the purpose of illustrating an efficient truck station system, the service given is of two types. The plan is one that has been employed with good results by a factory branch in one of the larger cities. The types of service are explained in the contract forms shown at Figs. 1 and 2. The former provides for inspection and service for trucks kept at the garage of the service company, while the second contract covers the same essentials for machines owned by business houses having their own garages, but without the facilities for expert attention. In the latter instance the trucks are regularly presented at the garage of the service company for inspection and necessary repairs.

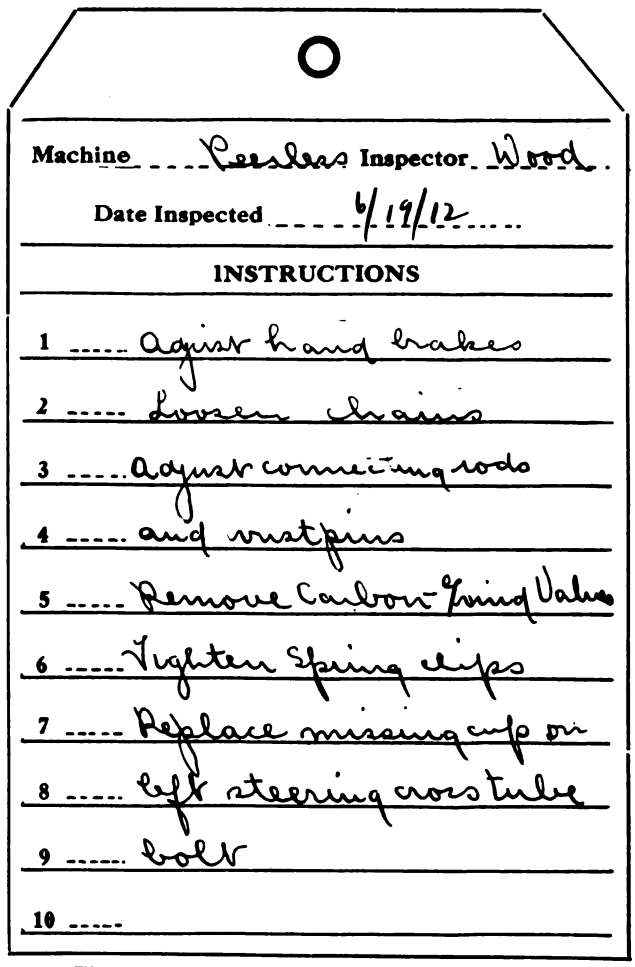

Fig. 3—Repair Ticket, Four by Seven Inches.

Digitized by Google

It must be borne in mind that in entering this field most of the work will be done at night, inasmuch as the machines are in constant use during business hours, except in the case of accidents, which cannot, of course, be foreseen. In many instances owners have relied upon pleasure car garages for truck service, and while the work performed has been painstaking and thorough, there has been much to be desired. In the pleasure car garage, the bulk of the repair work is done in the day, the night force consisting of employees who clean, oil, etc., and many stations do not pretend to give the same service at night as in the day. Another reason for this difference is that the machine and tool facilities, and the stock, are not available at night, for these

are under lock and key and accessible only to those responsible. Where commercial motors are cared for to any extent, however, these conditions are reversed, and employees with the required equipment are at hand to perform all necessary repairs that may develop.

The contract specifies what repairs shall be assumed by the company. It is bound to make such adjustments at once, but if the report indicates that work not covered by the contract is required, the owner is apprised of this, and can use his own judgment in the matter. It hardly will be expected that such repairs will be delayed longer than is absolutely necessary.

When the inspector has discovered necessary work the office force makes out the repair ticket, shown at Fig. 3, which is attached to the car on the floor. The repairman is thus informed as to what is required and no time is lost in going over the machine. Since the contract specifies the

EASTERN GARAGE & SERVICE COMPANY

		2	taper pins	.05	.10

Repairman H. Ames Foreman Johnson

Fig. 5—Stock Requisition, Four Inches Long by Two Wide.

sum to be paid for ordinary care and inspection of all machines, no charge is made for labor, the additional items being for supplies in the quantity used and for new parts utilized in replacements.

It will be recognized that on a majority of nights the only work necessary will be the inspection, oiling, washing and cleaning, taking not more than an hour of a man's time, while at another time, a job may develop which will require several men for a number of hours. Whenever a workman begins work on a truck the time card, which is on the reverse side of the repair tag, as shown at Fig. 4, is passed through the clock, thus registering the hour and minute at which work is started. Whenever he is called away, no matter for what purpose, he first visits the time clock, as a result of which when the work is finished he has a complete record of the job, to which the owner has access whenever he desires. These repair tickets show just what work was done and how long it took, accurately accounting for the workman's time.

When stock is necessary, a requisition blank, Fig. 5, is made out by the repairman and presented to the foreman, who has charge of the stock room under ordinary circumstances. This department is kept under lock and key and the foreman secures the part called for by the requisition. In the case of stock which has been secured and found not to have been needed, provision is made for its return, accompanied by a credit voucher, Fig. 6, which is made out by the foreman and given to the repairman.

Fig. 6—Credit Voucher, Four Inches Long by Two Wide.

When it is found that unusual repairs are needed, the owner's attention is immediately directed to them and his sanction secured before

Digitized by Google

the work is undertaken. Such work usually entails some expense, and it obviates friction when the owner's consent is given before the work is performed. For such work a small slip is filled out in duplicate, one copy of which is sent to the owner and the other retained in the office for reference. On this slip the nature of the work is specified, and its method of accomplishment cited, as shown in the form at Fig. 7. This official notification of such necessary work establishes a responsibility for any condition that might arise for failure to authorize the work needed. The statement of outside work serves to establish the charges as legitimate and also any cause for delay or failure when returned.

The foundation for attention to the mechanical condition of trucks is the reports made by the drivers, who are required to notify the foreman or the office of any trouble experienced or condition developed during the day. If there are in the reports any evidences of need for adjustments, breakages, or damage or wear, these are inquired into immediately and necessary work is begun at once. Experience has proven that it is well to take all the time available, because of possibilities of other developments, and as the

mechanical force is limited no chances can be taken. Where work can be completed it is taken care of, but in some instances a temporary repair is made until restoration of a permanent nature or replacement is practical. There are times when the tightening of a bolt or the adjustment of a part will mean the saving of many dollars, and nothing needed is left undone.

In addition to the nightly inspection the trucks are systematically inspected and gone over once a week. This duty is usually performed on Sunday, when the vehicles are not in use. The engine is run to determine its condition; the radiating, ignition and lubricating systems are examined; the clutch is tested; the transmission cover is removed and the gears tried by feeling; the chains are loosened, and the jackshaft, its bearings and differential are operated by hand to detect lost motion or wear; the brakes are operated and the connections gone over. Next the wheels are jacked and the condition of the bearings learned by testing with a pinch bar, and the steering gear and the lever arm, tiebar, knuckles and pivots are examined carefully. The work is thorough, and every bolt that is slack is tightened.

Nothing is taken for granted and each piece of work is tested. This means that the machines are always serviceable and that no time is lost except when laid up for painting or perhaps an overhaul. In order that the owner of a truck may know that he is getting the service he is paying for, a weekly inspection blank is filled out after the inspection, one copy being sent to the owner and the other retained at the garage office. This blank covers the work in every respect and is always available for reference when needed or to check against the other repair tags. The sheet indicates that all parts of the machine received attention and that adjustment, repair or replacement was made, with the time for the work, together with such supplies as were necessary and a reading of the odometer to show the work of the truck during the week.

In addition to this, there is a monthly report to accompany the bill, which gives the hours of service for the month, the mileage, the fuel, oil and grease used, the supplies furnished, the parts required, the charges for labor other than regular attention, with a summary of the condition of the truck and suggestion as to work needed or desirable. The value of the weekly report is to show that the truck was systematically examined and the proper care given. The monthly report details the cost of operation aside from the service charge, which, with the other detail available, gives the owner an accurate account of the expense of operation. This report is sent to the owner with his bill, a duplicate being kept in the office.

It readily will be seen that with this system as applied to commercial vehicle service, the interests of both owner and garagemen are conserved. The weekly inspection reports keep both parties closely in touch with each other; the repair tickets show just what work was done, how long it took and how the workman's time was employed; the requisitions, properly checked up at stated intervals, indicate the condition of the stock room at all times. Not only is this a satisfactory method of keeping watch of the business, but the work of the office force is greatly simplified. Much of the system outlined will be found adaptable to the average garage and repair shop, whether or not its service includes commercial vehicles.

Most garages doing business with owners of motor trucks started on a small scale, and this feature will be found lucrative to establishments dealing with pleasure cars. It is an added source of revenue that may well be cultivated as a side issue until such time as the business increases to an extent requiring either a separate building or a substantial addition to present facilities to be used as a commercial service department. The demand for a suitable check upon the various departments of a garage is so apparent that the suggestions given herein may be found of distinct value in working out a plan to meet individual needs.

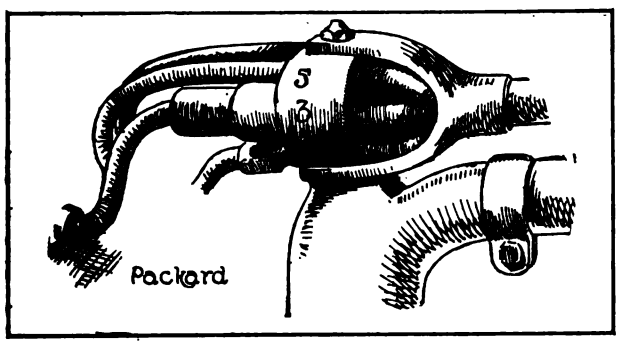
PROTECTING THE HIGH-TENSION CABLES.

THE owner of the modern automobile, whose experience is limited to the more recent types of internal combustion engines, does not fully appreciate the perfected ignition systems now in service. Instead of a tangled mess of wires, inviting trouble in the shape of short circuits, bothersome coils and exhaustible batteries, are compact, durable, efficient magnetos and simple wiring methods. And in place of yards of primary and secondary wires are a few short leads. Improved terminals and water proof instruments have reduced the care of the present ignition system to a minimum, the magneto requiring no other attention than an occasional oiling.

As the high-tension cables carrying the current get severe service, it is well to give these members the slight attention they require. They should not be exposed to the deteriorating action of heat or oil, either of which will in time lay the foundation for trouble in a mysterious miss or a loss of motor efficiency. It should be borne in mind that the wires carrying the high-tension current are subject to a pulsating current of high

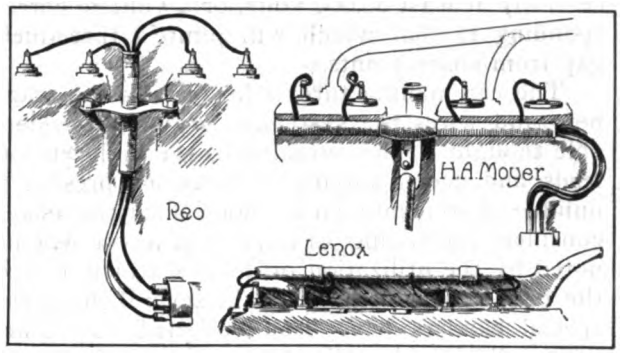


Illustrating Packard Method of Supporting High-Tension Cables and Numbering of Leads to Facilitate Location of Troubles.

voltage, but small capacity; that is, the current is small. The uniform carrying capacity of this cable is between No. 14 and 15 B & S gauge. The conducting material is sub-divided into finer wires for the sake of flexibility as well as for mechanical strength. High-tension wires are subject to a capacity effect which is inherent in all high-tension apparatus that carries a pulsating or varying current, such as an alternating one.

This capacity effect is sometimes apparent, especially when the cables are covered with dirt and water, forming a temporary conductor of greater or less conductivity. It is pointed out by the Packard Electric Company, Warren, O., manufacturer of ignition cable, that this is sometimes mistaken for a break down of the insulation, which is denoted in the dark when a light blue or tiny spark can be seen to jump from the wire to metal parts of the chassis, or to ground.

The company holds that this phenomenon does not indicate that the insulation has broken down or is even weak, for this so-called static effect is apparent in all insulation wires, but is magnified or intensified when the outer insulation is covered with water or dirt. The disagreeable effect of such phenomenon is demonstrated by the fact that a person can experience a severe shock by touching the high-tension cables when they are

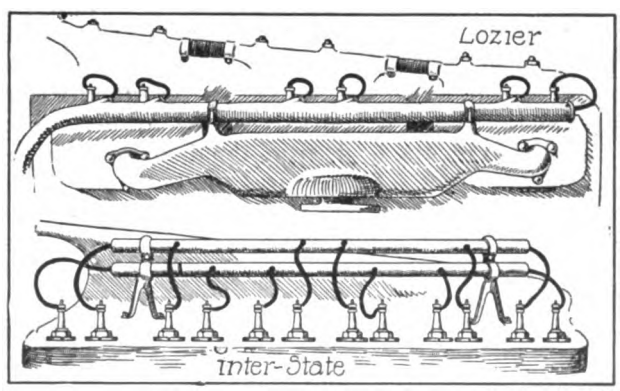


The Lenox Employs a Tube Clipped to the Water Manifold and the Reo a Vertical Tube Between the Cylinders—Moyer Design Is Also Shown.

wet, and if they are run sufficiently close to iron it is possible that enough heat will be generated at a single point where this static current is jumping to the metal, to heat the cable at that point and eventually burn it through until there is an actual break down from the conductor to the iron frame. Under the last named condition a new wire will be required.

There is another effect to be considered, namely, that of mutual induction. If two wires are parallel to each other and close enough, a supposedly dead conductor will be caused to have generated in itself from the effect of the live conductor in proximity to it, a sufficient voltage to jump across the spark gap of the plug, thereby producing two explosions at the same time, one of which is, of course, out of time. The effect of the static current on the outside can be reduced by sufficiently enlarging the diameter, but this is again limited to the size of the terminals provided on the magneto, coils, etc., and the cost of the cable is also a factor.

For example: Increasing the diameter by two; that is, doubling it, would make the cable contain 267 per cent. more insulating material and would only decrease the capacity effect 36 per cent. The effect of mutual induction can



The Inter-State Has Dual Tubes Well Away from the Cylinders and the Lozier a Single Tube.

be reduced by separating the cables so that they will be about an inch apart.

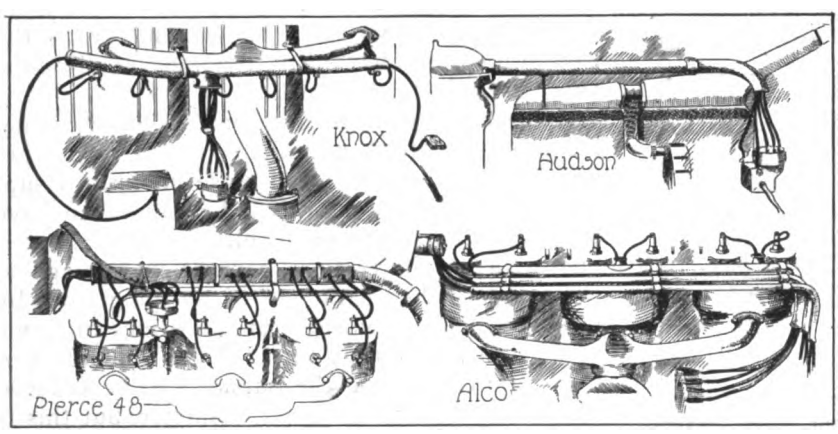
It has been held by some that a high-tension

Digitized by Google

cable will leak in service after becoming dry. The Packard Electrical Company states that while it may be true of ordinary cable, it does not apply to a high grade wire. Relative to the usual breakdown tests of a high-tension cable it may be stated that it should be able to withstand successfully at least 30,000 volts, or a voltage corresponding to that which will jump a three-inch gap from sharp points.

The car manufacturer who installs the magneto and wires the system, has given considerable thought to the retention of the high-tension leads and accompanying illustrations present a number of conventional methods. That the maker considers the wiring an important factor will be noted by the utilization of devices which add to the cost of production, and in several instances special carriers have been designed. In practically all of the installations coming to the attention of the writer, the wires are so supported that opportunity for mutual induction is reduced to a minimum.

In several instances the wiring has been greatly simplified by utilizing a numbered carrier; for example, the cable connecting the No. 3 terminal of the distributor of the magneto and the plug of the third cylinder is plainly marked. The Packard 38 utilizes this arrangement, as will be noted by an accompanying illustration, which depicts the special carrier and shows the leads entering a tube. Another Packard model employs a form of numbered block. With both, it is possible for the owner to trace a faulty connection very easily.



Showing Differing Installations of High-Tension Cables, Including Those Utilized on the Knox, Hudson, Pierce-Arrow and Alco.

The Knox and Hudson employ a tube for carrying the high-tension cables, the former utilizing it also for the leads from the distributor of the battery system. These wires are led from a central opening of the tube, while those connecting with the spark plugs have individual openings. The Hudson carries its wires from the dash through a rubber hood, thence to a straight tube having an end curving downward and ending in proximity to the distributor device of the Delco system employed on this make.

The carriers are not always constructed of non-conductive material, as is noted in the case of the Alco and the Cadillac. The former employs three pipes, the inside member carrying the leads from the magneto, another the wires from the distributor and the third for the primary members. The Pierce-Arrow favors an aluminum carrier, having a flat top, and provision is made for two sets of high-tension cables, two sets of plugs being fitted to the 6-48. The Lozier also affects metal, utilizing a brass tube retained by studs to the intake manifold, and having hard rubber inserts to protect short circuits by possible chafing of the insulation. The Pierce-Arrow adopts similar precautions against opportunity for short circuits.

The dual sets of high-tension wires of the Inter-State motor are carried in metal tubes, one above the other, the container being fitted with suitable insulation where the leads leave the tubes. The latter are carried on special brackets sufficiently spaced from the top of the cylinders. The Fiat carries its wires in a long brass tube bolted to the cylinder studs, and the White also affects the tube design. The last named car encloses its magneto as well, using a leather cover, a practise noted of a large number of cars.

The maker of the Peerless, which for several seasons has employed a hard rubber cable carrier, continues the practise, and the material of the design shown in an accompanying illustration is in the form of a T, the lower portion of which extends very close to the source of current supply.

A number of makes utilize the outlet water manifold of the motor to support the cable carrier, among which is the Overland. The design referred to is a split clamp like device of fibre, and it will be noted that the wires are well spaced from one another. Just above the magneto the leads are maintained in a separated condition by another similar holder. The Metz employs a construction very similar to that of the Overland. The leads of the Marmon Six are retained in a bracket between the cylinder units, either end of the carrier being attached to the top of the cylinders. A similar method is noted in the Reo with the exception that the bracket retains a tube passing vertically through it and extending well above the top of the cylinders.

The Lenox carries its wires compactly and with a minimum length. Clipped to the top of the outlet water manifold is a copper tube and the use of rubber inserts not only prevents movements of the cables but the possibility of short circuits.

Ebony as a support for the cables is noted on one prominent make of car, while others employ metal brackets, fitting the wires snugly to prevent vibration chafing the insulation. There appears to be a wide diversity of opinion as to the proper protection of the high-tension cables, but it may be said that the majority of the manufacturers so attach the leads that they are not sub-

Digitized by Google

jected to heat, dirt or oils. The practise of some to extend the protective material in proximity to the magneto, thereby preventing deterioration through the action of grease, is noticeable.

AUTOMOBILE SECURITIES.

An almost general increase of stock prices characterized the market in automobile securities, due to a steady demand. Gains were registered from fractions to eight points, the latter record being that of Firestone common. Following are the quotations:

GARAGEMEN SECURE STAY.

New York City Association Takes Appeal in Case to Have Ordinance Declared Invalid.

The New York Garage Association, which stands behind the Joscelyn Stable Company, operating the Joscelyn garage, in its court action, has appealed from the recent decision of the appellate division of the supreme court, which held the New York City ordinance relative to the installation of gasoline separators in garages legal. The case will now go before the court of appeals at Albany, the highest court in the state. The Joscelyn Stable Company asked for a writ of mandamus to compel the fire commissioner to issue a garage permit when a separator has not been installed, but this was denied.

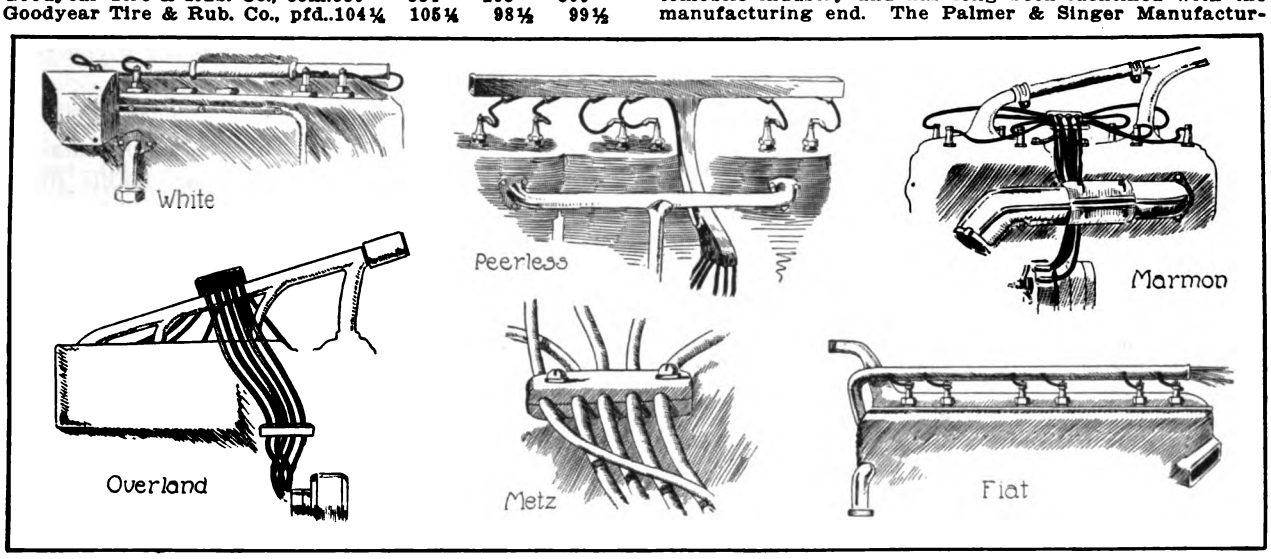
The appeal acts as a stay until a decision has been rendered, which will not be until November or December. The claim of the garages is that the separator device prescribed to remove oil and gasoline from waste water going into the sewer is ineffective, and inasmuch as considerable outlay is entailed in its purchase, the ordinance is inflicting an injustice on the trade. The garage association has been reinforced in its fight by the New York Automobile Dealers' Association and the Brooklyn Garage Owners' Automobile Board of Trade, which recently held a joint meeting to consider the matter.

MATHESON WITH PALMER-SINGER.

Well Known in the Industry He Becomes Western Manager of the Company.

C. W. Matheson, for eight years chief executive of the Matheson Automobile Company, Wilkesbarre, Penn., maker of Matheson cars, has formed an association with the Palmer & Singer Manufacturing Company, New York City, producer of the Palmer-Singer automobiles. Mr. Matheson will be western manager, in charge of the business of the company in the territory between Pittsburg, Penn., and the Pacific Coast.

Mr. Matheson is one of the best known men in the automobile industry and has long been identified with the manufacturing end. The Palmer & Singer Manufacturing Company recently doubled its factory output and is preparing to double it again within the next 12 months. The company is therefore in a position to develop the western territory, which was neglected in the past.



Indicating That There Is a Difference of Opinion with Makers as to the Proper Method of Retaining and Protecting the Leads Conveying the High-Tension Current to the Spark Plugs.

PREST-O-LITE HAS TWO SHIFTS.

The Prest-O-Lite Company, Indianapolis, Ind., has placed its plant at Speedway on a day and night basis. The company announces, however, that the demand for acetylene tanks still keeps the factory considerably behind its orders.

BOSCH ENLARGES SERVICE FACILITIES.

Establishes Branch at New York City, Which Takes Over Details of Business of Executive Office.

A New York branch of the Bosch Magneto Company, New York City, has been organized for the purpose of giving undivided attention to the increasing number of Bosch users in its territory. The details of operations previously carried on by the executive officers and staff are now taken care of by the new branch, in a field, known as the Eastern territory, made up of all the states east of the Ohio and Mississippi rivers.

Space in the Bosch building, 223 West 46th street, New York City, has been temporarily made over to the new branch, and its activities will be carried on there until the growing needs of the executive office and main office forces, or the normal increase of its own needs shall make it necessary to find new quarters. Alfred J. Poole, formerly assistant chief engineer, has been appointed manager of the new branch, and with a staff of experienced assistants is aggressively furthering the business of the company.

CARRYING STAPLE GOODS.

When a business man discovers that he is expected to have in stock lines that are well known, a fact which he quickly learns, he also appreciates that the products most widely advertised have the greatest demand. The reason is not hard to find. The articles that are continually brought to the attention of the public through recognized mediums soon come to be regarded as standard and staple. They carry with them the reputation of the maker and his intention to maintain their character and value, a consideration which has its effect upon the general public.

A firm's money invested in this class of goods is more quickly turned over than can be true of lines that are not advertised and which are little known in consequence. It is obvious that it requires much more time and salesmanship to dispose of an article, concerning the worth of which the customer must be convinced, many times against his better judgment. The extra profit that may be derived from such a sale is more than offset by the fact that no argument is necessary in order to acquaint the purchaser of the merits of the well advertised product, to say nothing of the possibility of dissatisfaction arising from the acquisition of inferior goods.

It also is well to remember that the advertised merchandise has no opportunity to deteriorate on the shelves. The capital invested is not tied up for long periods, nor is it subjected to a percentage of loss on the final disposition of the stock. It not only pays to advertise, but it pays to carry advertised goods.

SPECIALIZING DISTRIBUTION.

While it cannot be contended that the principle of placing the product of the factory in the hands of a sales company for distribution is by any means new in the industry, there appears to be a decided tendency toward the adoption of this method. Within the past few months several new companies have been formed to take over the entire output of certain factories, with sales rights in this country and abroad, while other manufacturers have abandoned their local branches to place the distribution for given territory in the hands of sales companies.

The movement is quite in line with this age of specialization. Under this plan, the maker occupies the position of being responsible only for the actual production of the machines at a fixed manufacturing price, while the marketing is to be done by concerns making a specialty of sales policies. Although the wisdom of this may be questioned by some, the principle appears sound. It would seem that those best fitted to engage in their respective fields could lend their co-operation to each other in such manner as to be provocative of the best results.

GENEROSITY IN GIVING SERVICE.

Much stress has been laid upon the giving of service to garage patrons. So fine has the line been drawn that it is sometimes difficult to distinguish where gratuitous service begins and ends. No garage should fail to give patrons those little attentions which go to make its service agreeable, but it is undeniable that there are many who are prone to take undue advantage of a system which permits of slight services for nothing.

There are many who enter a garage and request that certain things be done to their cars, consuming considerable of a mechanic's time, for which the garage has to pay. They imply that this work is to be done as a favor and it is difficult to determine just how far car owners may be permitted to go along this line. To affront them may mean the loss of customers and revenue. It is a situation that calls for tact and a patron's record must in many cases be the determining factor regarding generosity in service.

TRADE INFORMATION EXCHANGE

BUSINESS PROPOSITIONS.

Opportunities Are Offered Below for Agents to Secure New Lines, for Manufacturers to Extend Their Representation, and for Producers to Get in Touch with Those Who Are in the Market for Equipment and Supplies. All Are Opportunities for Live Men and Firms Seeking Profitable Relations.

The Following Details of Trade Opportunities Presented by Members of the Trade Information Exchange Are Published Without Names, Those Interested Desiring the Negotiations to Be Strictly Confidential. Replies Should Be Addressed by the Number Given and Sent to the Exchange with Postage for Forwarding.

ACCESSORY AGENCIES WANTED.

2814—Texas Firm, recently changed hands, is in the market for all kinds of automobile accessories and supplies.

9842—New York State Company, under new and progressive management, is interested in all kinds of accessories and supplies for pleasure and commercial vehicles.

2632—Iowa Concern, which has enlarged its plant for increased business, would like additional lines of first class accessories and supplies.

5866—Iowa House, with several makes of standard motor cars, can handle to advantage new lines of automobile accessories and supplies.

6332—Minnesota Firm, increasing its scope of business, is in the market for all kinds of automobile supplies and accessories.

5907—Illinois Company, agent for a line of high grade cars, is anxious to handle approved makes of accessories and supplies.

5639—Michigan Concern, conducting a first class repair and automobile supply station, can handle accessories and supplies of guaranteed manufacture.

3864—Florida Supply House, incorporated for $50,000 and occupying modern quarters, is interested in accessories and supplies for pleasure cars and motor trucks.

3957—New Zealand Company, planning to build electric vehicles, is in the field for electric motor car chasses, bearings, brakes, chains, controllers, sprockets, wheels, rims, motors and general accessories for building vehicles complete.

7315—California Company, recently established, is interested in accessories and supplies for pleasure and commercial vehicles.

7634—Texas Firm is in the market for a complete line of accessories and supplies for automobiles.

7854—Michigan Party would like information relative to all parts for motor truck assembly, except motors and tires.

7894—Missouri Company, under progressive management, will investigate automobile accessories, etc., and garage and repair shop supplies.

4758—District of Columbia Firm, making a specialty of supplies, would like repair shop supplies and accessories for automobiles.

6247—Connecticut Firm is in the market for automobile accessories and garage and repair shop supplies.

6124—Minnesota Company desires information of automobile, garage and repair shop supplies.

EQUIPMENT NEEDED.

8643—Florida Firm, doing a big supply business and covering a certain part of Florida and all of the South bi-monthly, is in the market for all kinds of repair shop supplies and garage and repair shop equipment.

6935—Michigan Repair and Auto Supply Station, recently established, desires garage and repair shop supplies and equipment, including machine tools, etc.

3462—Minnesota Company, increasing its business, is interested in all kinds of equipment and supplies for the garage and repair shop, including tools and other necessities.

8675—Iowa House, handling two standard makes of cars, is in the market for garage equipment.

6231—Iowa Firm, making extensions, is in the market for garage and repair shop equipment.

8249—New York State Company, under new management, is interested in all kinds of equipment for the garage.

8142—Texas Concern, recently changed hands, is in the market for equipment for garage and repair shop, machine tools, etc.

5126—Oregon Company is interested in machine tools and repair shop equipment of all kinds; also garage equipment, including lathe, drill press, air pump, vulcanizer, etc.

4931—Illinois Firm, enlarging its business, wants equipment for garage and repair shop, also machine tools.

6857—Connecticut Concern, recently formed, is in the market for machine tools, garage and repair shop equipment.

3148—Michigan Company would like to secure good line of garage and repair shop equipment, including machine tools and fittings for automobiles and power wagons.

5891—Illinois Firm, engaged in repair and general automobile business, is interested in machine tools, garage and repair shop equipment and power wagon fittings.

2351—California Company is in need of repair shop equipment for repairing and retreading automobile tires.

CAR AGENCIES WANTED.

6473—Texas Company is in the market for a line of pleasure cars selling between $950 and $2500.

7421—California Concern, doing large business in second-hand cars, can with advantage take on a line of pleasure cars selling from $500 to $1000, and motor trucks from $650 to $1200.

3598—Texas Firm, operating first class garage and repair shop, would like a line of pleasure cars listing between $650 and $2500.

6483—Minnesota House, enlarging place of business, can accommodate another make of automobile to sell between $600 and $1250.

4928—New York State Concern, now handling two standard lines of pleasure cars, would like the representation in its territory of another line listing between $500 and $2000, and motor trucks to sell between $700 and $4000.

3162—Iowa Company, now having additional room, is in the market for another line of pleasure machines listing between $500 and $2000.

7564—Iowa Firm, having good pleasure car business, is about to branch into the commercial field and wants agency for trucks selling from $500 to $1500.

5824—Michigan Company, recently established in modern plant, is seeking agency for pleasure automobiles to sell from $400 to $850, and commercial vehicles listing at $800 to $1200.

3719—New Jersey Company is seeking line of commercial vehicles selling from $800 to $3000; also will take agency for motor fire fighting apparatus selling up to $10,000.

1130—Illinois Firm, conducting automobile agency, supply and garage business, is interested in agencies for pleasure cars selling up to $3500, and motor trucks listing from a low figure to $2000.

4966—Pennsylvania House, recently established, with good line of cars, is desirous of adding a good pleasure vehicle selling between $1425 and $1850.

5098—Illinois Company is desirous of taking agency for pleasure cars selling between $1000 and $2200, and motor trucks listing from $1000 to $2500.

7854—Missouri Firm, strongly established, is interested in securing the agencies for pleasure cars and trucks selling at all prices.

RECENTLY ANNOUNCED 1914 MODELS.

Packard Adopts Worm Bevel Gear Drive—Church Features Pneumatic Transmission—Marion Brings Out a Six—Two-Speed Rear Axle on Cadillac.

WHILE there has been prediction that the 1914 announcements of the pleasure car manufacturers would offer little that was radically new in design or construction, it would appear that effort had been made by some to present features that are worthy of special consideration. Among the details made public recently may be mentioned the following, particularly attention being directed herein to the important features only:

Marion—Marion Motor Car Company, Indianapolis, Ind. Marion Six models G5, five-passenger touring, and G2, two-passenger roadster. Motor, six-cylinder, L head, cast in threes, 3.75-inch bore, 5.25-inch stroke; lubrication, combination force feed and automatic level splash, in which conventional breather pipe is eliminated; Westinghouse lighting and starting system, with drive direct to the front end of the crankshaft through silent chain at a reduction of 15:1; magneto ignition, multiple dry disc clutch, Marion type rear system with three-speed transmission rigidly bolted to differential housing, left hand drive, centre control.

Packard—The Packard Motor Car Company, Detroit, is soon to produce new 38 and 48 horsepower models which will incorporate a new type of worm bevel gear drive. It is explained that this drive will comprise a bevel gear and pinion having teeth which bear the same relation to ordinary bevel gear teeth as do the teeth of the now familiar spiral or helical spur gears to ordinary spur gear teeth.

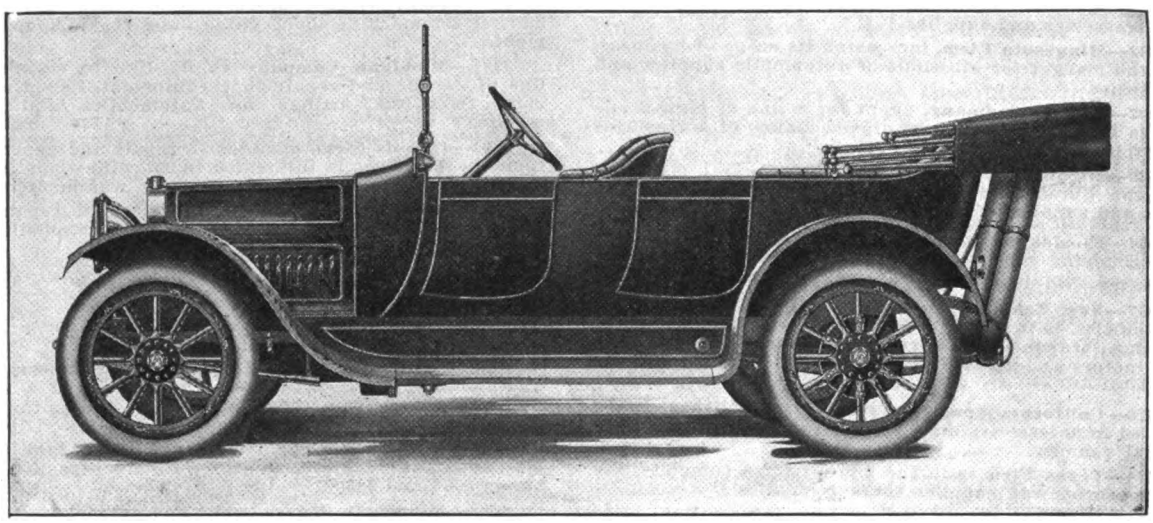
Church—The Church Motor Car Company, 2019 Michigan avenue, Chicago, has placed in the market a new car embodying the Church pneumatic system. The motor is a four-cylinder, two-cycle unit, cast en bloc, with bore of 3.5 inches and stroke of five. Connection with the propeller shaft is through a rotary air pump, which takes the place of both clutch and transmission, at the same time precompressing the air used in the motor cylinders, the fuel being injected later. Two bodies, a four and a six-passenger, will be fitted. Equipment includes electric lighting, air starter, tire inflator, air jack, etc.

Palmer-Singer—Palmer & Singer Manufacturing Company, Long Island City, N. Y. Model K Brighton Six; two-passenger roadster, four-passenger toy tonneau, five-passenger touring. Motor, six-cylinder, cast in threes, four-inch bore, five-inch stroke, rated at 45 horsepower; ignition, Eisemann duel high-tension magneto; lubrication, combined splash and pump system; three jet carburetor; multiple disc clutch, three speeds forward and reverse; full floating rear axle; tires, 36 by 4.5 inches; wheelbase, 128 inches. Equipment includes Westinghouse electric lighting and starting systems, demountable rims and one extra rim.

Allen—Allen Motor Company, Fostoria, O. Model 40 five-passenger touring car. Motor, four-cylinder, en bloc, 4.125-inch bore, five-inch stroke; unit power plant, three point suspension; thermo-syphon cooling; constant level splash lubrication; Splitdorf dual magneto; multiple disc clutch, lined with Raybestos; three-speed transmission; full floating rear axle; semi-elliptic springs forward, three-quarter rear; 34 by four-inch tires; left hand drive, centre control; Auto-Lite electric starting and lighting, demountable rims with one extra rim. Roadster will be built on same chassis.

Abbott-Detroit—Abbott Motor Company, Detroit. Belle Isle model, three-passenger roadster and seven-passenger touring. Motor, six-cylinder, rated at 50-60 horsepower. Standard equipment includes electric lighting and starting, with separate motor and generator units, and magneto ignition. Other models in the line will include 34-40, four-cylinder, five-passenger touring car and roadster; 44-50, four-cylinder seven-passenger touring, five-passenger demi-tonneau and three-passenger roadster.

Cadillac—Cadillac Motor Car Company, Detroit. The chief feature in the new model is the use of a two-speed direct drive rear axle, which has a low speed ratio of 3.66:1 and a high speed ratio of 2.5:1. It is maintained that with an engine speed of 700 revolutions a minute the low gear direct drive will give a car speed of 21 miles an hour and the high 30. The change in speeds is effected by means of an electric switch. Other details have not been made public as yet.



Allen Five-Passenger Touring Car, Having Four-Cylinder Block Motor, Rated at 40 Horsepower.

Victor Cyclecar—Victor Motor Car Company, 271 Diamond street, Philadelphia, Penn. Two passengers, side by side. Motor, four-cylinder, water-cooled, 3.25-inch bore, four-inch stroke; cone clutch, three speed selective sliding gear transmission, bevel driven rear axle, wire wheels, 30 by three-inch tires, wheelbase 90 inches, tread 52. Equipment includes top and windshield.

Downing-Detroit Cyclecar—Downing-Detroit Cycle Car Company, Detroit. Two passengers, tandem. Motor, two-cylinder, air-cooled, V, 3.5-inch bore, 3.67-inch stroke, rated at 12 horsepower; ignition, Bosch high-tension, armored type magneto; carburetor, Schebler; transmission, two speeds forward and reverse; semi-elliptic springs front and rear; tires, 28 by 2.75 inches; wheelbase, 103 inches; tread, standard, 56 inches.

HEWLETT EXTENDS TERRITORY.

E. E. Hewlett, Los Angeles, Cal., prominent in the racing world, has acquired nearly all the western territory for the sale of Fiat cars. Hewlett, who has been the Fiat representative at Los Angeles, has completed negotiations for the Chicago district, and now has those two cities, as well as Seattle, Wash.; San Francisco, Cal., and Tacoma, Wash. He has made arrangements to specify Ajax tires, made by the Ajax-Grieb Rubber Company, New York City, on all cars delivered to him in future.

PATENT BILL OPPOSED.

Patent Law Association of Chicago Presents Statement to the Senate.

A thorough statement prepared by the Patent Law Association of Chicago has been presented to the Senate at Washington by way of comment upon the Oldfield bill for revision of existing patent laws. Naturally, the statement is somewhat lengthy, covering as it does the many features of the situation. After citing the alleged evils of the present patent system and the suggestions for their removal, the association submits what it believes to be satisfactory arguments against these features of the bill. Particular objection is made against the proposition for compulsory licenses and the elimination of retail price restrictions. Considering the former the statement is in part as follows:

The Oldfield bill provides for compulsory licenses, the avowed object being to prevent the shelving of competitive patents. The theory of the amendment seems to be that an inventor may hold more than one patent relating to the same subject matter so long as he does not contract or agree with others to suppress one or more of his patents. The report justifies this by an argument that the inventor is presumably meritorious and impecunious, and must enlist outside aid to bring his inventions before the public, but assumes that the assignee of a plurality of patents relating to the same industry is attempting to create a monopoly of monopolies and that such ownership is without justification. Of course, the bill ignores a large class of cases where the inventor himself takes out numerous patents relating to the same industry and manufactures under some, but not all, of them. It does not operate against the individual patentee unless and until it has been shown he has agreed with some one else to suppress one of his patented inventions or that he is suppressing a competitive patent acquired by assignment from another.

As to the compulsory license feature of the bill, we do not find from the evidence adduced before the House committee, nor from any other source of information, sufficient justification for a resort to this scheme, which is wholly antagonistic to the basic principles of the American patent system.

The Oldfield bill, in providing for compulsory licenses, seeks to introduce the idea of a working requirement; but does it by indirection, possibly because of the apprehension that a direct requirement would be unconstitutional.

Regarding price restrictions, the following argument is set up:

If a patentee has a monopoly in the making, using and selling of an article, and has the right to suppress the invention wholly and to exclude others wholly, it follows that he has the right to suppress it in part or to admit others on such terms and conditions as he may fix. Of course, it may be argued that under the constitutional provision it is still within the province of Congress to fix conditions and limitations affecting the exclusive right whch the constitution mentions, but the reasoning of all of the decisions up to the present time points to the conclusion that when the constitution used the word "exclusive" it meant just that, and that the constitutional provision could not be avoided by fixing conditions and limitations upon the exclusive right which impaired or lessened its scope. This, of course, does not mean that patent property like other property is not subject to other provisions of the constitution and to the laws of the land, as for example to the police power of the states and the laws relating to the conservation of the public health and the public morals. But the provisions of the Oldfield bill, at their face value, take away from the owners of patented property the right of contract which is enjoyed by owners of unpatented property. We can not see any justification for prohibiting the patentee from fixing in the terms of his contract as one of the conditions of a license the price at which the article shall be resold, if that be necessary to the preservation of his monopoly and if the restriction be imposed as a condition of the license.

IMPORTANT COURT DECISION.

Garage Held Responsible for Damage, Although Employee Extended Testing Trip Longer Than Necessary.

A recent decision of the supreme court of Kansas is of deep interest to all service station proprietors, inasmuch as the court found that an employee of a garage, engaged in testing a car after it was repaired at the garage, is fully within the scope of his duty, even if he extends the testing trip longer than is absolutely necessary, and the garage company is held liable to any damage that occurs to the car on said testing trip.

It was shown that after the car had been repaired, the employee had taken it out for testing, and also to convey to his home a customer of the garage who had taken his automobile there for repairs that could not be completed at once. While on this trip the automobile was wrecked. The garage proprietor contended that the employee had taken more time on the trip than was necessary and that the latter exceeded his express authority, therefore relieving the service station of liberality. The court admitted that perhaps the trip had been longer than necessary, but did not deem the employee to have acted outside the scope of his employment, and found for the complainant on the ground that the machine had been negligently wrecked.

RECEIVER FOR R-C-H.

Judge Session of the United States circuit court in Michigan has appointed the Security Trust Company of Detroit receiver for the R-C-H Corporation of that city, which has been in the hands of a creditors' committee since last winter. It is understood that this action was taken with the consent of the entire board of directors and a majority of the creditors, for the purpose of clearing the way for reorganization. The factory will be kept in operation, as 7000 orders for machines have been filed.

MUNCIE GEAR WORKS.

Eugene Vatte has been appointed receiver of the Muncie Gear Works, Muncie, Ind., upon application of E. C. Atkins & Co., Indianapolis, Ind. The complaint alleges that the liabilities of the company are $277,061.80 and the assets $204,752.03. It is admitted, however, that there are orders now in hand amounting to $400,000, sufficient to net a profit more than equal to the difference between the liabilities and assets.

The Simms Magneto Company has completed the final movement of its plant and the offices and factory are now located at East Orange, N. J.

FINE BUSINESS OPPORTUNITY.

Five Buildings at Providence, R. I., Suitable for Manufacturing or for Truck Service Station.

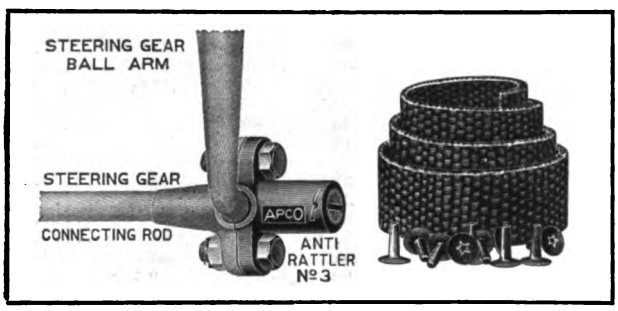
The property of the General Fire Extinguisher Company, in West Exchange, Bradford and Cedar streets, Providence, R. I., vacated by that company for a larger plant at South Auburn, R. I., is suited for manufacturing purposes, or it may be made a mammoth garage for motor trucks at comparatively trifling expense. The buildings are five in number, four of them directly connected, and the fifth connected by overhead passages, having a floor area of approximately 78,000 square feet. Buildings Nos. 1 and 3 are of brick, with three stories and high basements, and the other three structures are of brick and stone construction. They are piped for steam heat and for the Grinnell sprinkler system, the latter insuring minimum insurance rates.

The location is convenient to the business section of Providence and is ideal for a garage and service station. The property, which has a total area of 84,644.46 square feet, can be purchased as a unit, or it may be divided into nine parts for the purpose of sale, the five buildings and four parts of unoccupied land. Full information may be obtained from G. L. & H. J. Gross, manager of estates, 170 Westminster street, Providence, R. I.

NEW APCO FORD ACCESSORIES.

Auto Parts Company Announces Steering Rod Anti-Rattler and a Non-Metal Brake Lining.

The Auto Parts Company, Providence, R. I., well known maker of accessories for model T Ford cars, announces two new Apco devices which are shown in an accompanying illustration. The company has taken into consideration the demand for a high grade brake lining adapted to the service brake on Ford machines, and has had the Apcobestos material constructed especially for its patrons. It is a special lining containing no metal and is furnished in lengths to fit the brake drum. It is



Apco Non-Metal Brake Lining and Steering Rod Anti-Rattler, New Products of the Auto Parts Company.

held by the Ford engineers that the use of brake lining containing metal is largely responsible for magneto troubles, in that particles of the material affect the efficiency of the generator. Rivets are supplied with each length.

The Apco steering rod anti-rattler No. 3 is one of the most practical devices produced by the company, as by it play in the ball arm of the steering arm and connections is eliminated and it is also possible to make adjustments from time to time as needed. It replaces the usual steel cap on both ends of the steering gear connecting rod, which when adjusted by filing the halves of the ball socket, usually results in the part binding when the wheels are turned. This is due to the difference between the worn, flat and round part of the ball.

The Apco device consists of a bronze shell adjusted by means of a screw plug in the base, and with it it is possible to eliminate all play. The shell member also contains a spring which holds a steel stud in contact with the ball, resulting in a cushioning effect, and thus in easier steering, as well as eliminating lost motion. Both of these devices are moderately priced.

STUDYING CYCLECAR FIELD.

Francis R. Hoyt Has Been Engaged as Consulting Engineer by Ohio Men Who Are Interested.

Francis R. Hoyt, Cleveland, O., a consulting engineer of wide acquaintance in the motor car industry, is engaged in an investigation of cyclecar development for a group of Ohio business men, whose identity is withheld for the present. The purpose of the inquiry is to analyze fully the mechanical features of the cyclecar and small car as they have been evolved in foreign practise, with such modifications as are necessary to meet American conditions.

It is expected that the report will show the best design to incorporate in a vehicle which will be light in weight and simple in construction, but sturdy enough for high speed and poor roads, capable of going 45 miles on a gallon of gasoline and of making 40 to 50 miles an hour. It is also intended to design a monocar for light delivery service, which will be capable of carrying 400 to 500 pounds exclusive of the driver.

WALPOLE TIRE RECEIVER.

Company Is Temporarily Embarrassed Through Failure of Atlantic Bank.

Judge Dodge of the United States District Court in Boston, has appointed Robert C. Fisher and Judge Robert O. Harris receivers for the Walpole Tire & Rubber Company, Walpole, Mass., maker of Walpole tires. It is explained that the company is embarrassed through the recent failure of the Atlantic National Bank, Providence, R. I., which was carrying come of its paper. The operation of the plant will be continued, and it is understood that plans for the reorganization of the company are being discussed by the creditors and others interested.

The following schedule of assets and liabilities as of June 30, has been filed in court:

Assets.

Plant	$1,230,815
Patents, good will, etc	1,312,419
Stock other companies	20,450
Treasury preferred stock	103,000
Cash	23,860
Trade	197,805
Sub. and coup. notes	15,944
Other accounts receivable	89,954
Consumers' Rubber Company	27,030
Notes receivable	40,090
Prepaid accounts	10,678

Liabilities.

Accounts payable	$258,705	
Notes payable	847,800	
Contingent liabilities	190,595	
Accrued taxes	3,600	
Accrued payroll	9,609	
Reserves:—		
L. O. Duclos com	3,900	
Disc. and doubtful accts	30,534	
Doubtful notes received	9,514	
Total liabilities		$1,353,357
Balance of assets		$2,773,281

IMPORTS AND EXPORTS.

Report for June Indicates That More Low-Priced Cars Are Going Abroad.

The report of the United States Department of Commerce for the month of June, 1913, shows very little variance from the corresponding month in 1912, in the import and export of automobiles. The number of automobiles imported this year was 44, valued at $105,516, as against 41 in 1912, valued at $100,927. The exports for June, 1913, showed a total of 2154 machines, valued at $2,191,152, while in 1912 the number was 1941, with a valuation of $2,116,174. Following are the official figures in detail:

Imports.

	1912		1913	
Country	No.	Value	No.	Value
France	21	$50,106	20	$45,293
Germany	3	8,806	9	25,642
Italy	5	10,425	4	7,149
United Kingdom	7	17,105	1	2,300
Other countries	6	14,485	10	25,132
Totals	42	$100,927	44	$105,516

Exports.

France	67	$49,905	71	$54,746
Germany	27	35,787	157	136,171
Italy	42	35,185	55	33,098
United Kingdom	327	222,961	386	289,457
Other Europe	161	161,123	204	171,783
Canada	755	1,026,567	383	596,681
Mexico	7	8,470	5	9,505
W. Indies and Bermuda	30	31,822	23	19,315
South America	167	174,145	169	187,185
British Oceanica	146	143,376	318	332,212
Asia and other Oceania	136	158,478	206	207,105
Other countries	76	68,355	177	153,894
Totals	1941	$2,116,174	2154	$2,191,152

WILL ERECT NEW FACTORY.

The Sternberg Manufacturing Company, Milwaukee, Wis., maker of Sternberg trucks, has broken ground for an addition to the large plant erected three years ago. The new plant will cost $50,000, and was made necessary because of the cramped condition of the present factory. When the addition is finished the company will exactly double its working force and output of trucks.

HECO MAGNETOS

INSURE A STEADY SPARK AT ANY R. P. M.

HECO MAGNETOS are the product of experts specialized in the electrical business. They embody all that the electrical industry knows about magnetos.

By our special method of winding the secondaries we are able to positively guarantee them against burning out or breaking down.

HECO MAGNETOS supply a spark of equal intensity for any number of revolutions per minute.

We also make the well-known HECO COILS and HECO COMBINATION PRIMERS and SPARK PLUGS. Let us send you our complete catalog.

WANTED—SPECIALTY SALESMEN

Live wire specialty salesmen, district managers in West, Middle West and South, to sell the Schemmel Welding and Cutting Machine, which is self-generating and is the best on the market. Right men can make ten thousand dollars annually. Reference required. Must finance yourself. Full particulars first letter. Confidential. DAVIS SALES CO., HOLLIDAY BLDG., INDIANAPOLIS.

"IDEAL" Atomizing Primer

"The Primer that's Different"

Did you ever CRANK and CRANK and CRANK and then wonder why? The Ideal (Atomizing) Primer eliminates hard starting difficulties by forcing only a certain amount of the mixture (contained in the reservoir) into the intake manifold ateach stroke of the handle. The mixture (high test gasoline or gasoline and ether mixed) is forced into the different branches of the manifold in an atomized spray, causing quick evaporation and an immediate ignition. This is what you want—with our guaranteed satisfaction or money back.

If your dealer cannot supply you, order direct from Manufacturer.

Complete polished brass $5.00. Nickel plated 10c extra. Special discount to Dealers and Jobbers.

"The Car of No Regrets"

KING

$1095 with Equipment
Ward Leonard Starter and Generator for $100 net additional

See the KING—then buy! It's fairness to yourself. You can't afford to purchase *any* car until this highest of motor values has been investigated. The KING offers *more* service, comfort, style, and convenience than can be had in any car near its price, and has desirable, patented features which *no other* car can offer.

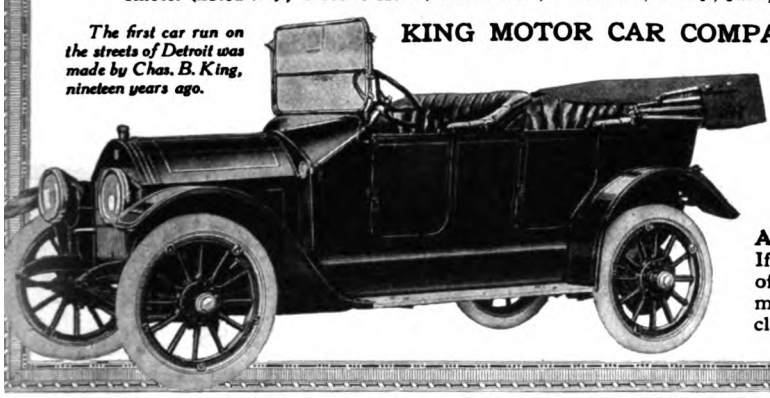
FEATURES OF MODEL B, 30-35 HORSE-POWER

Two Styles—One Chassis—Touring Car and Roadster

Cantilever Rear Springs	Three-point Suspension	Full-floating Rear Axle	Hyatt Roller Bearings	Briggs Magneto
Long-stroke Motor	Gemmer Steering Gear	Left-hand Steer	Center Control	Stromberg Carburetor
Unit Power Plant	Complete Electric Lighting	18-inch Steering-wheel	112-inch Wheel-base	20-inch Rear Doors

Rain-vision Ventilating Windshield; Silk Mohair Top; Quick-attachable Curtains; Quick-detachable Rims; Stewart-Warner Speedometer (listed $50); Electric Horn; Extra Rim; Tire-irons; Pump; Jack; Tire-repair Outfit; Tools, etc., all in regular equipment

The first car run on the streets of Detroit was made by Chas. B. King, nineteen years ago.



KING MOTOR CAR COMPANY, 1300 to 1324 Jefferson Ave., Detroit, Mich.

New York Agency and Showrooms, Broadway at 53d St.
New York Service Department, 244 to 252 West 54th St.

AGENCY FOR CANADA
King Motor Sales Co. of Canada, London, Ontario

ATTENTION, AGENTS! Every KING sold sells others. If we could show the KING to every prospective purchaser of a moderate-priced car, we could sell a year's output monthly. In service and style, it far exceeds any car of its class. Write or wire today for territory.

No. 240
Vulcanizing Cement

Is made of Pure Para Gum, milled with only those ingredients which make it vulcanize thoroughly.

This cement can be used in the manufacture and repair of all articles made of rubber.

Especially adapted to the repairing of Automobile Tires and Inner Tubes.

No Sediment **No Waste**

Supplied in all quantities. Prices quoted upon request.

TUXEDO TIRE CO., Inc.
149th Street and Grand Concourse
NEW YORK CITY

Tire Repairing

is a great and fast increasing business. Pays repair men $40,000,000.00 a year now with about a million cars in use. Think what the future will be. Pays big profit and requires little capital. Get in the repair business and get your share.

Akron-Williams Equipment

Is the best equipment made. Built by tire factory experts. Used by nearly all tire manufacturers—27 out of the 30 leaders. That fact proves Akron-Williams superiority.

Localized Heat

The 3 separate steam chamber feature gives heat just where needed—limits heat to repaired part. Repair Plants of any capacity—and all appliances for tire repairing.

Write us for catalog No. 12. It tells all. Write now.

NOTICE

We respectfully call attention to the fact that the Knox Automobile Company is the only other manufacturer licensed to build tractors under the "Martin" patents and other patents owned by Mr. C. H. Martin. These patents, we believe, cover every possible, practical combination of a self-supporting and steerable tractor, with a non-self-supporting trailer. The patents comprise the following:—

Hunter	670,405,	Mar. 19, 1901
Hunter	696,143,	Mar. 25, 1902
Hunter	625,953,	May 30, 1899
Thayer	678,063,	July 9, 1901
Martin	1,018,248,	Feb. 20, 1912
Hight	698,836,	Apr. 29, 1902
Liebau	655,724,	Aug. 14, 1900

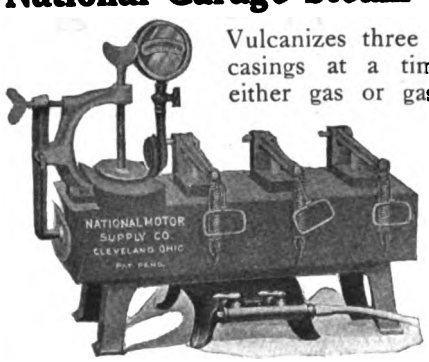
and numerous applications are now pending in the United States Patent Office.

This notice is merely in the nature of general information.

MARTIN TRACTOR COMPANY

SPRINGFIELD, MASS.

National Garage Steam Vulcanizer

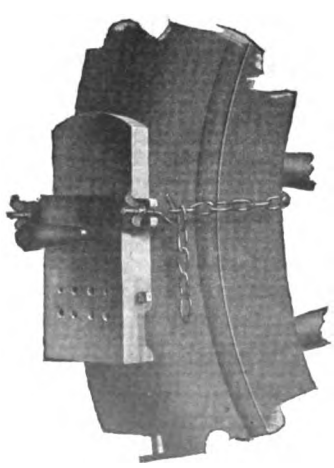


Vulcanizes three tubes and two casings at a time. Heated by either gas or gasoline. Fourth year on the market, and thousands of satisfied customers.

GARAGE MEN

Write at once for our special selling plan, where you pay for vulcanizer after it has earned its cost.

Wizard Automatic Steam Vulcanizer



For both tubes and casings of any size. Vulcanizing face 6"x3". Burns gasoline or alcohol. Heat control entirely automatic. Nicely nickel plated. Guaranteed to do the work of any other portable vulcanizer costing up to $15. Full instructions and supplies packed in neat wooden box. The biggest bargain ever offered. If you do not find it so, will gladly refund your money. List price **$5.00.** Dealers price **$3.00.** Send money order today.

CORRECT INFLATION IS TIRE INSURANCE

The Dewey Power Tire Pump

$10 COMPLETE

Cuts Out The Hand Pump Misery

Your Tire's Life Depends Upon Exact Inflation

With the Dewey, the motor does all the work and it shows you what your tire pressure must be to benefit by the tire maker's guarantee.

THE DEWEY IS THE ONLY PUMP THAT IS NEVER OILED. It can't rot the inner tube with greasy vapor because it pumps chemically pure air only.

Applied instantly to any car. Three methods of attachment.

The Dewey, with high grade dial and all connections, including 12 ft. of special hose, tested to 1,000 lbs., sold everywhere under a year's rigid guaranty for **$10**

Ask your dealer for the Dewey. If he is not supplied, we will send you the Dewey prepaid on receipt of price.

You're Never Cornered with a Starrett Ratchet Wrench

It will turn any standard nut or bolt in all sorts of difficult places—places where the ordinary monkey wrench is useless. For working about an auto, there's no tool like it. The ratchet permits rapid action with only a short arc swing. The extension reaches into otherwise inaccessible places. With this wrench you need never be stalled because of a breakdown that requires a drill, for the drilling attachment furnished with the wrench takes any twist drill from ⅛" to ½" and makes repairs of this kind easy. A reversible screw driver makes it handy for turning screws of various sizes, too.

Send for catalog No. 20 G.T. and see the whole Starrett line of fine tools. It's worth while.

Why don't you carry a line of Starrett Tools?

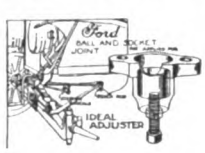
Equip Your FORD with IDEAL ADJUSTERS
BALL AND SOCKET JOINT

Easy to Install
Easy to Adjust
Made Especially for the FORD Car



Stop All Noise and Rattle
FORD Radius Rod and Steering Rod

The largest size is used for adjusting front end of radius rod, and enables you to take up at any time all lost motion on these parts, also eliminates the rattle and noise. All this is done by a turn of the setscrew which tightens the bearing on the inside.

The small size is used for adjusting the ball and socket joints on the steering gear connecting rod.

We guarantee all adjusters for the life of a car and they are so simple they can not work out of adjustment or need repair.

WILL FIT ANY FORD MODEL. Will give territory and special discount to dealers. **List Price, Large Size, $2.00; Small Size, $1.75.** If unable to purchase from your dealer, order direct. Manufactured by

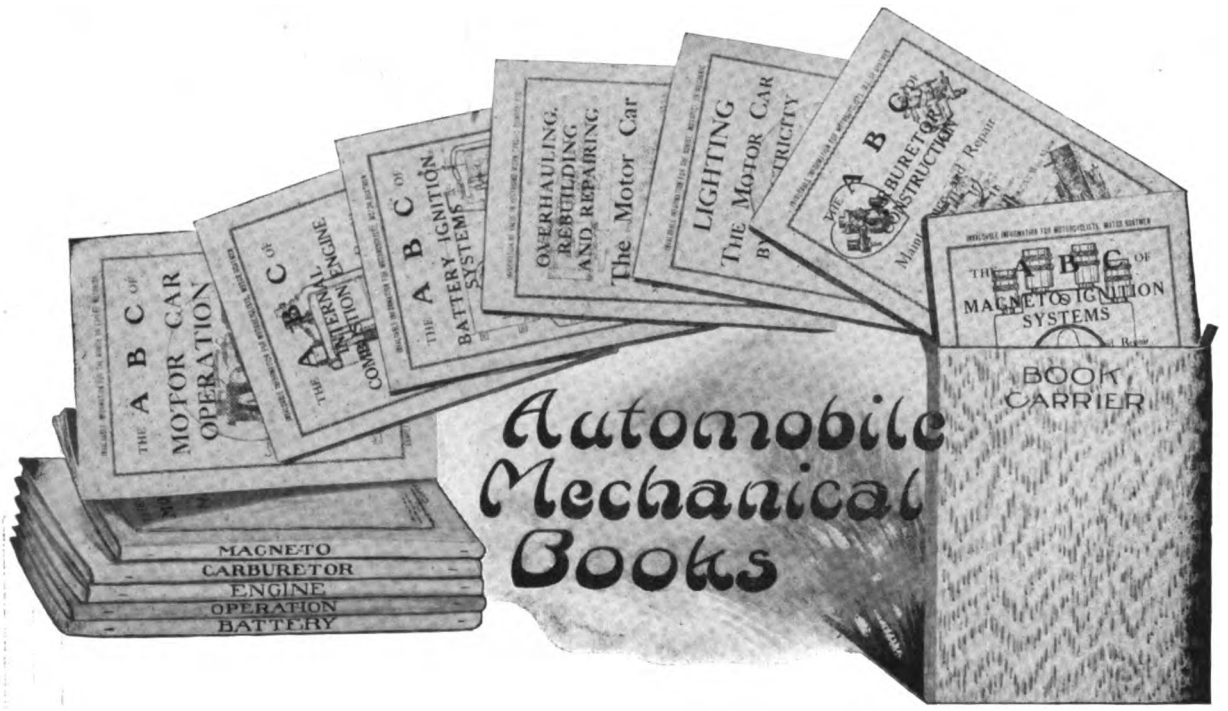
10 Automobile Mechanical Books 10

ENGINE—MAGNETO—CARBURETOR—BATTERY—ELECTIC LIGHTING—TIRES—CHASSIS —OPERATION—OVERHAULING, REBUILDING AND REPAIRING—THE MOTORCYCLE.



A Library of Automobile Mechanical Information

800 Pages of Text—1500 Illustrations—Half a Million Copies Sold Annually.

Knowledge of your car means additional pleasure in its use and decreased cost in operation and maintenance. The practical instruction that you need is to be found in these books, and to acquire the same fund of information in any other manner would require years of constant study. You must understand your motor if you would adjust or repair it. The subject is fully treated in the Engine book. This applies as well to the Magneto, Carburetor, Battery, Lighting, Chassis and Tire books. When overhauling and rebuilding, read that discussion. The book on Motor Car Operation covers that subject with reference to all cars. No matter what the need, there is a book to meet it. No car or component is neglected, and all standard engines, magnetos, carburetors, batteries, lighting systems and vehicles are dealt with. The full set includes:

Engine	$ .35	Motor Car Tires	$ .25	Magneto	$ .35
Carburetor	.35	The Motor Car Chassis	.25	Motor Car Operation	.50
Lighting by Electricity	.50	Motorcycle Construction, Care and Repair	.35	Overhauling, Rebuilding and Repairing	.50
Battery	.35				

Full Set, 10 Books.....$3.75

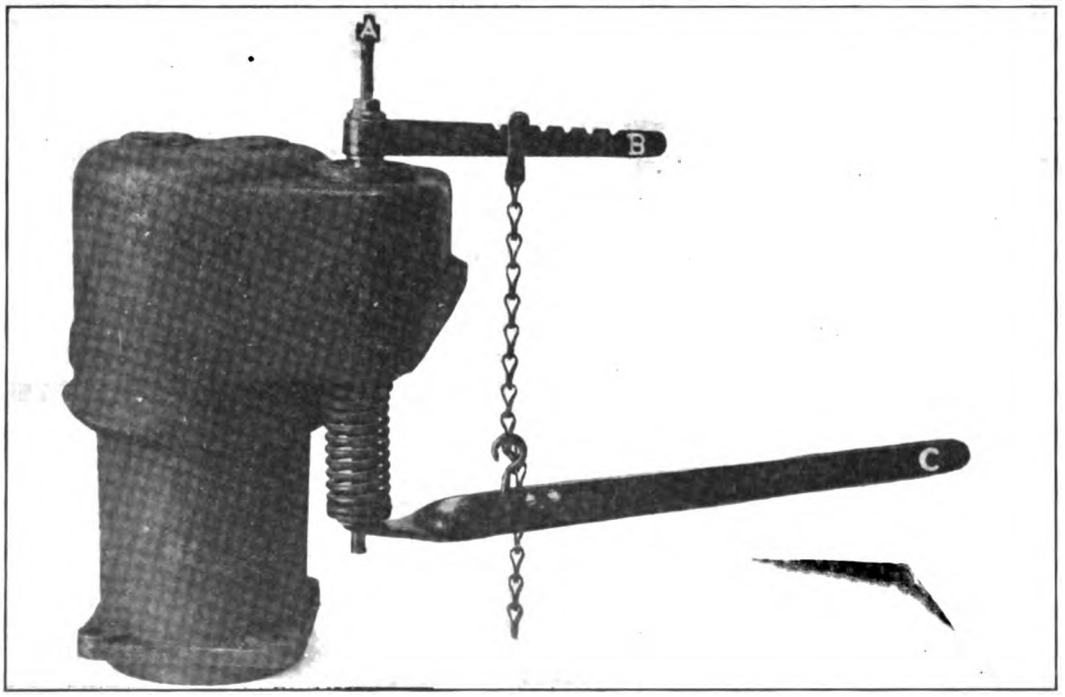
Winsor Patent Adjustable
MOTOR VALVE REMOVER

A perfect and practical tool, adjustable to nearly every motor and easily operated without wrenches, etc. Can be adjusted in a few seconds by the fingers. Positive in action. **No Slipping.**

TO THE TRADE

You have been looking for a valve remover that can be used on all makes of motors. One that is practical, simple and efficient. The demand is constant and universal among pleasure car owners. Such a tool is absolutely essential to the maintenance and operation of commercial vehicles. The market is unlimited and you want the best. The WINSOR PATENT ADJUSTABLE VALVE REMOVER as shown is the one accessory you can sell readily and because it is the best it will keep your customers satisfied. Thousands sold monthly to repairmen, garages, pleasure and commercial car owners and users. Will last a lifetime, is guaranteed and a money maker for those who sell it.



TO USE: Remove spark plug, insert Barrel A and screw down spindle with fingers which prevents valve from lifting. Attach adjustable chain to Lever B which revolves around the spindle A. Hook chain to adjustable Lever C. A slight depression, because of the enormous leverage obtained, will compress valve spring, permitting of easy removal of locking mechanism. Note the length of Barrel A and Lever B, accommodating every type of motor.

Made in sizes to fit all spark plug openings. In ordering, state size of spark plug.

LIST PRICE

Enameled black, each $2.50 Nickel plated, each $5.00 Extra barrels, each $1.50

A Remarkable Campaign in Painted Bulletins

LIKE mushrooms, springing up over night, Texaco painted bulletins are appearing throughout the country. Hundreds of them will soon line the important automobile highways of the East and middle West.

These bulletins, distinctive and attractive in design, send the car owner to the dealer's door in search of Texaco Motor Oil. Coupled with the Texaco Dealers' Sign, they form an endless chain of trade for the dealer who carries Texaco.

Have you lined up with those who are taking advantage of the Texaco Sales Helps? The bulletins and the signs are of course not all of them. There is a widespread magazine campaign embodying splendid selling copy. There are booklets, etc. Lastly there is the oil itself. It makes good for the dealer who sells it.

You owe it to your business to become better acquainted with Texaco Motor Oil. For an introduction and interesting details address:

VOL. III. PAWTUCKET, R. I., SEPTEMBER, 1913. No. 5.

STANDARD OIL AND CAR PRODUCTION.

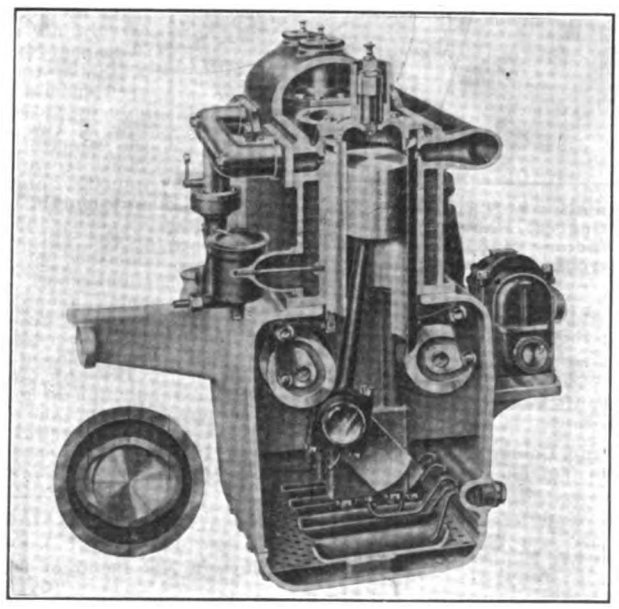
Organization of Rockefeller Motor Company Gives Occasion for Many Rumors—Standard Capital Said to Be Interested in New Palmer-Singer Motor.

WHETHER or not the Standard Oil Company is to enter the industry as a producer of automobiles has been a subject of concern among manufacturers and owners for some little time. Earlier in the month, various newspapers throughout the country chronicled the organization of the Rockefeller Motor Company in Cleveland, O. The concern was said to have been incorporated with nominal capital, the incorporators being Sterling Newell, F. S. Whitcomb, R. F. Denison, Ellis R. Diehm and Thomas F. Fay. With the exception of Fay, these were understood to be members of a law firm closely connected with Standard Oil interests. Fay was formerly editor of a large automobile trade publication.

According to the original dispatch, this concern was to take over the Goby Engine Company of Cleveland, a company recently formed to produce the Goby single sliding sleeve engines, and also to produce a kerosene burning engine. It was further intimated that cars ranging in price from $350 to $1000 would be produced, these to be capable of averaging 50 miles on a gallon of kerosene or gasoline.

Letters addressed to the Rockefeller Motor Company and the Goby Engine Company have failed to elicit information. But a subsequent dispatch from Cleveland denies certain portions of the original story. It is now maintained that the attorneys interested in the Rockefeller company are in no way connected with John D. Rockefeller or the Standard Oil Company. The name is said to have been chosen from the fact that the company will occupy offices in the Rockefeller building.

Despite the denials, the Wall Street Journal says it will not be surprising to see interests allied with the Standard Oil Company eventually become identified in a large way with the manufacture of automobiles. In a dispatch from Boston, this organ publishes the following:



Sectional View of Magic Motor, Which Has Been Adopted for 1914 Palmer-Singer Models.

Men connected with Standard Oil are understood to have made an effort several months ago to get control of the Ford Motor Company, the country's largest motor car producer, but Henry Ford, its chief owner, is said to have refused to sell at any price. Within a few weeks Standard Oil money has been picking up the common stock of one of the four largest automobile companies in the country with a production of about 35,000 cars per annum. It is too early yet to say whether a controlling interest is what the Standard capitalists are after. It is also understood that Standard Oil money has made some headway in buying into another automobile enterprise.

The reason for Standard Oil's interest in automobiles is believed to lie in the huge surplus stocks of kerosene stored at various points throughout the world. The Rockefeller Motor Company, supposedly formed by the oil people, has practically admitted that its primary purpose is to build an engine that will burn kerosene instead of gasoline. If this attempt proves successful, the automobile industry will be revolutionized and Standard Oil will receive general approval for having furnished a cheap fuel for the most popular means of transportation the world has yet discovered.

Palmer-Singer with Magic Motor.

In this connection it is of interest to note that, according to the officials of the Palmer & Singer Manufacturing Company, Long Island City, N. Y., Standard Oil capital is

Digitized by Google

interested in the Motor & Gear Improvement Company, which concern has purchased the American rights in the Magic motor, transmission and wheel, which will be utilized in the construction of 1914 Palmer-Singer models. This motor, a cross section of which is shown herewith, as tested by several Detroit engineers about a year ago, is termed a silent slide crescent valve engine, and thus far there has been no indication that this was to be built for use with any other fuel than gasoline. It is claimed that it will give greater power and efficiency with less vibration and at less cost than other types. The transmission is of the internal gear type, while the wheel has special demountable features which are expected to make a decided appeal to the owner.

At a recent meeting of the board of directors of the Palmer & Singer Manufacturing Company, Charles A. Singer, Sr., resigned as president to become first vice president. Clyde D. Knapp, who formerly held the office of first vice president, was promoted to the presidency. The company announces that the change was made in order to permit Mr. Singer to devote his entire time and attention to the production end of the business. Naturally this will mean the development of the new models, the company having recently acquired the right to manufacture under the patent rights held by the Motor & Gear Improvement Company.

It is expected that the new Palmer-Singer models will be in the Broadway showrooms of Druet & Page, New York City agent, this fall, and that the company will be in a position to fill orders for these in the late spring, probably about June 1.

Members of Haynes Official Family: Left to Right, Top and Bottom—President Elwood Haynes, General Manager A. G. Seiberling, Chief Engineer Frank N. Nutt; Factory Manager A. N. Wilhelm, General Sales Manager George H. Strout, Advertising Manager Robert Crawford.

DEMISE OF G. W. BENNETT.

Vice President of Willys-Overland Company a Victim of Appendicitis in Toledo.

The automobile industry, as well as a large portion of the business world in America, was shocked to learn of the sudden death of George W. Bennett, vice president and general manager of the Willys-Overland Company, in Toledo, O., Sept. 19, after an operation for appendicitis. His rare executive ability was a big factor in the success of the plants known as the John N. Willys holdings, and he was prominent throughout the industry because of his insight into the business methods making for permanency.

Mr. Bennett came to this country from England when a young man. At first he was identified with the bicycle industry as sales manager for the Thomas B. Jeffery Company, and went into the automobile field with this firm. Later he became associated with the Knox Automobile Company, Springfield, Mass., and the White Company, Cleveland, O. Soon after John N. Willys purchased the business now bearing his name in Toledo he became vice president of the Willys-Overland Company, and his duties grew with the expansion of that concern, Mr. Willys being the controlling factor in several other companies, among which may be mentioned the Gramm Motor Truck Company and the Garford Company. He was particularly well known in the East and Middle West and his advice was much sought after in all matters affecting the automobile industry.

HAYNES OFFICIAL FAMILY.

Something About the Men Responsible for the Production and Sale of Haynes Cars.

Elwood Haynes, president of the Haynes Automobile Company, Kokomo, Ind., started his career of invention at 15. After completing the courses at the Worcester Polytechnic Institute and Johns Hopkins University, he was constantly engaged in scientific work until 1891, when he conceived the idea of the horseless carriage. Preparing his drawings, he employed two Kokomo machinists to assist in working out the plans. He made his first automobile trip July 4, 1894. The original Haynes car is now an exhibit at the Smithsonian Institute, Washington, D. C.

A. G. Seiberling, general manager of the company, has held the important position of purchasing agent with such concerns as the Pittsburg Plate Glass Company and the Great Western Plate Glass Company. He organized the Peoria Rubber & Manufacturing Company in 1896, and engineered a fortunate consolidation with another large concern. He came to the Haynes company after 10 successful years in the automobile field in important executive capacities.

For 10 of the 14 years that Frank N. Nutt has been with the Haynes organization he has been engineer—at first assistant and then chief. He is a born mechanic, and at the early age of eight was spending spare hours at his home made drafting board or in a neighboring machine shop. At the first opportunity he learned the machinist's trade—and learned it well—of a painstaking French machinist. He manufactured bicycles for a few years, and has been with the Haynes ever since.

A. N. Wilhelm, factory manager, was reared on a farm in Winamac, Ind. When 20 years old he apprenticed himself to the Peru Electrical Manufacturing Company, Peru, Ind., and at the end of nine years had become one of the most expert machinists in the country. In 1903 he began making tools for the Haynes company. He was absent from the force for a period, but returned in 1912 in his present position.

George H. Strout, general sales manager, is almost too well known in the industry to need special introduction. Upon leaving college he entered the bicycle business, and inside of two years was branch manager for the Monarch Bicycle Company in New York City. It was a logical step into the motor car industry, and in 1903 he formed the Western Automobile Company, St. Paul, Minn., which he sold in 1905 at a highly remunerative figure. Since then, in executive selling capacities, he has become known to a large number of automobile dealers, large and small, from coast to coast.

Robert Crawford, advertising manager, is best known for his work in the cement industry. First with the Universal Portland Cement Company, then as advertising manager for the Chicago Portland Cement Company, he won the reputation of getting more publicity for cement in general and for his own company in particular than anyone else in a similar capacity. He can be depended upon to better, if possible, his past successful record with the Haynes.

GENERAL MOTORS REPORT.

Shows a Net Profit of $8,284,139 for the Year, a Gain of Over $3,000,000.

The annual report of the General Motors Company, Detroit, shows a net profit of $8,284,139, an increase of $3,445,691 over the previous fiscal year. There was a balance of $7,459,471 after paying interest on the company's six per cent. first lien notes, and a surplus of $6,140,937 after paying the preferred dividend of seven per cent. The assets are given as $58,538,160, an increase of $3,580,-002. The gross sales for the year were $85,603,920, as compared with $64,744,496 in 1912.

The sole outstanding funded debt of the company at the end of the fiscal year consisted of $10,935,000 in six per cent. first lien notes, maturing Oct. 1, 1915, which is the unpaid balance of the original issue of $15,000,000. Oct. 1 the company will be required to pay $2,000,000 to the trustee for the account of sinking fund. The company anticipated the payment of $1,000,000 of this sum

Digitized by Google

in July and since the close of the year has paid more than $1,000,000 additional.

TORRINGTON COMPANY'S REPORT.

Annual Statement Reveals Disposition of Splitdorf Electrical Company Holdings.

In its annual report, the Torrington Company, Torrington, Conn., which is in a sense a holding company for the Excelsior Needle Company and the Standard Company of Torrington, the National Needle Company of Springfield, Mass., and the Splitdorf Electrical Company, Newark, N. J., as well as other concerns in this country and abroad, reveals the disposition of the Splitdorf business which was acquired something like a year ago.

Previous to the purchase this concern was known as C. F. Splitdorf, Inc., and was located in New York City. It was subsequently reorganized as the Splitdorf Electrical Company and removed to Newark. The Standard company took over the spark plug business and the Excelsior Needle Company the ball bearing business of this concern. The report says that these two lines have increased in volume and profit, and while it is impossible to make report concerning the earnings of the Splitdorf company, it is believed that it will eventually prove one of the most profitable holdings of the Torrington company. The annual report shows the following figures:

Receipts.

	1913	1912	1911
Dividends	$352,847	$360,285	$237,518
Rent	110,000	110,000	110,000

Totals	$636,868	$1,401,406	$350,474

INCREASES CAPITAL STOCK.

Ray Harroun Company to Erect Its Own Kerosene Carburetor Factory in Indianapolis.

The Ray Harroun Company, Indianapolis, Ind., maker of the Harroun kerosene carburetor, offered as optional equipment on Henderson cars, has filed notice of an increase in capital from $50,000 to $600,000. At least $200,000 of this money will be devoted to the erection of a factory, the company having been housed in a leased plant heretofore. It is stated that orders have been received for 200,000 carburetors, and additional manufacturing facilities are regarded as imperative.

BUYS McCUE WIRE WHEEL PLANT.

George W. Houk Takes Over Buffalo Factory for Production of Rudge-Whitworth Design.

According to a dispatch from Buffalo, N. Y., George W. Houk, president of the George W. Houk Company, Philadelphia, has purchased the plant, good will and business of the McCue Company, 1700 Elmwood avenue, Buffalo, which concern has been manufacturing the McCue wire wheel for the past two years. The Houk company has the American rights for the production of the Rudge-Whitworth wire wheel, a British design, and it is understood that the Buffalo plant will be devoted to the manufacture of a wire wheel under these patents, to which will be attached the Houk demountable rim.

HANDLES MANY LINES.

John V. Wilson Company, Manufacturers' Selling Representative in Philadelphia and Boston.

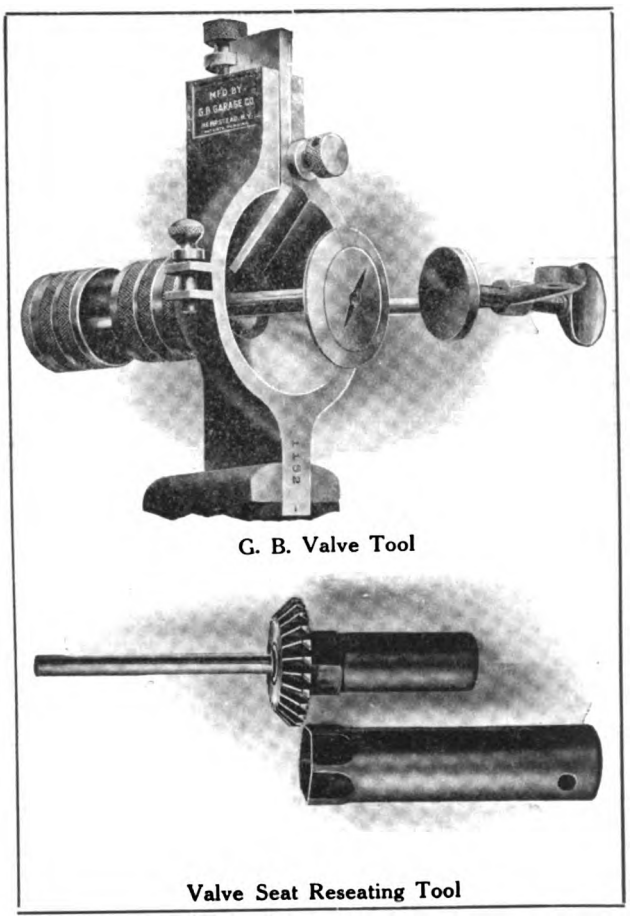
The John V. Wilson Company, with offices in Philadelphia and Boston, is acting as manufacturers' selling representative of automobile and motorcycle equipment, and the lines handled by this concern are such as to win instant favor with motorists. The Boston office is at 220 Motor Mart. The following partial list will serve to indicate the character of supplies carried:

Rhineland Machine Works Company, Rhineland ball bearings, A. V. shock absorbers, Lindhe laminated shim brass; Auto Parts Company, Apco Ford specialities; Dean Electric Company, Tuto, Rexo and Maxo electric horns and Dynalux lighting dynamos; N. Y. & N. J. Lubricant Company, Non-Fluid oils, Motorol cylinder oils; Fulton Company, Aermore exhaust horns, Rogers sidecar, Sabo motorcycle locks, convertible tools; Jeffrey-Dewitt Company, Reliance, J. D. and standard spark plugs; Fulton-McCutchan Company, K. C. inner tubes and sundries, Victor lamps and metal boxes, Lydon speedlers and Ford specialties.

G. B. VALVE TOOL.

New Valve Dressing and Reseating Device, Eliminating Grinding and a Time Saver.

The G. B. Sales Corporation, 1790 Broadway, New York City, is marketing the G. B. valve tool, which comprises a dresser and a reseating tool, both of which are shown in an accompanying illustration. The valve dresser is so constructed that it will dress valves of any size or material at a perfect angle of 45 degrees, while the reseating tool cuts the seat quickly and accurately to meet the exact angle of the valve proper. This is not always possible with the grinding-in process or by refacing with the lathe. One of the several features claimed for the G. B. device is that the valve is absolutely centred when it is being dressed, resulting in a perfect face. It is stated by the inventor that perfect seats may be obtained in 30 minutes as against many hours labor when an abrasive is uitilized. Estimating that it will take eight hours with an abrasive, the G. B. device will save the customer approximately $4.50.



G. B. Valve Tool

Valve Seat Reseating Tool

Another advantage of the tool is that all carbon deposits, ridges, pits, etc., are removed quickly. The blades and cutters are removable and may be sharpened easily by the user. The tool is of drop forged, case hardened steel, the blade and seat cutter being constructed of high speed, oil tempered tool steel, and the equipment is guaranteed against defects in material and workmanship. It is the invention of George G. Bouthinon, who perfected it while superintendent of a large automobile factory.

The tool is clamped in the vise as shown in the upper illustration and by means of two knurling nuts the valve is located properly. The cutter blade is adjustable by means of a screw and locked by a similar member. The valve is pressed against the cutting blade by a bridge member, which includes a feeding device. The valve stem is rotated by a dog, not shown in the illustration. The company issues a neat booklet on its equipment, which will be forwarded free on request.

GENERAL NEWS OF THE MANUFACTURERS:

The Pope Manufacturing Company, Hartford, Conn., is said to be negotiating a 10-year mortgage loan for $2,000,000, the avowed purpose being to have available more ready capital to replace temporarily the large sum which has been used in building up the business. The report for the fiscal year shows that the company had gross sales of $1,400,000, of which $500,000 came from the bicycle and motorcycle end of the business and the balance from automobiles.

The Mitchell-Lewis Motor Company, Racine, Wis., announces the election of the following officials: President and general manager, H. L. McLaren; vice president and general factory manager, John W. Gates; second vice president, W. T. Lewis; treasurer, F. L. Mitchell; secretary, H. E. Rodman; general sales manager, O. G. Friend; purchasing agent, C. W. Morgan; general counsel, M. J. Gillon. It is further announced that the bankers and stockholders are not only of one accord as to this change, but are loyally supporting it for a period of five years.

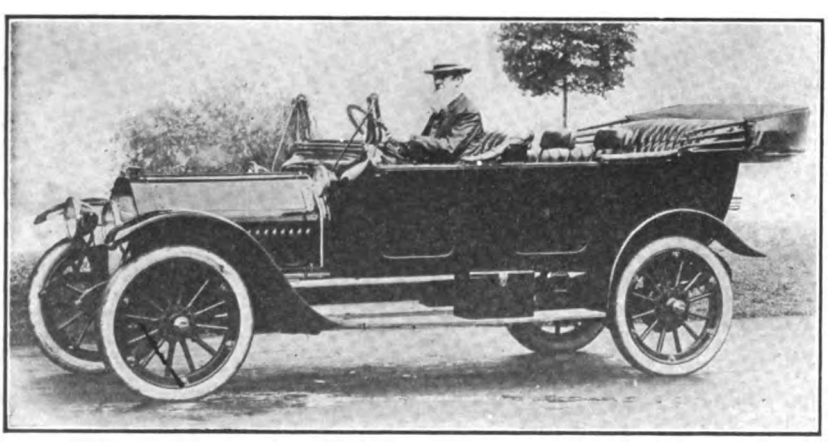
The Hazard Motor Manufacturing Company, Rochester, N. Y., is erecting a new building, 60 by 130 feet, to obviate the necessity for operating its present motor plant 20 hours a day and to provide for future expansion.

The Knight Tire & Rubber Company, Canton, O., has opened a direct factory branch in Kansas City, Mo., in charge of Earle J. Berry as manager. E. J. Hess will have direct charge of the local territory.

Ray Harroun, inventor of the Harroun kerosene carburetor, has opened a salesroom and service station at 537 North Capitol avenue, Indianapolis, Ind.

E. K. & A. K. Allen, for some time agent in Seattle, Wash., for Pennsylvania and Republic tires, has brought out a new anti-skid tread, which it proposes to manufacture in large quantities.

The Thompson Garage Company, Clarksburg. W. Va., is preparing to enlarge its business to manufacture in the near future.



J. M. Studebaker, Octogenarian Automobile Manufacturer, Enjoying a Drive in His Studebaker Six.

The Gemmer-Detroit Starter Company has been incorporated for $200,000 in Detroit to produce a new motor starter, recently brought out by George A. Gemmer, formerly head of the Gemmer Manufacturing Company. L. W. Smith is associated with him in this enterprise.

The Great Western Manufacturing Company, La Porte, Ind., maker of motorcycles, bicycles and parts, has completed the erection of a large plant.

The Chalmers Motor Company, Detroit, reports net earnings of $1,273,261 for the fiscal year, an increase of $71,510. After deducting the seven per cent. dividend on $1,500,000 preferred, the balance was equal to 23.3 per cent. on the common stock, which receives 10 per cent. annually.

The Texas Company, maker of Texaco oils, etc., has declared a quarterly dividend of 1.75 per cent. This is an increase of .25 per cent., and places the stock on a seven per cent. yearly basis.

The W. C. Hendrie Rubber Company, Torrence, Cal., has turned out its first set of Hendrie tires, which were given a test by Louis Nikrent in the recent Corona races.

The A. & C. Motor & Manufacturing Company is seeking a factory location at Long Beach, Cal.

The Martin Shock Absorber Company, Los Angeles, Cal., is erecting a factory at Central and Saluson avenues. Jesse E. Taylor is manager.

The Sterling Motor Company, Flint, Mich., which recently passed into the control of W. C. Little, formerly of the Little and Chevrolet companies, has removed to the plant vacated by the Chevrolet company in Detroit. It is understood that the concern will add a line of cyclecar motors to those already manufactured by it.

M. O. Reeves, Columbus, Ind., is heading a committee of business men in that city which seeks to secure a controlling interest in the Mais Motor Truck Company, Indianapolis, Ind., with a view to removing the plant to Columbus.

The Zenith Carburetor Company, Chicago, Ill., has moved into its new factory recently purchased from the Armstrong Woolen Company on the Belt line.

The Michigan Welding Company, Detroit, has completed an addition to its factory which practically doubles its floor space, and the additional equipment installed will enable almost double the present production.

The Benham Manufacturing Company, Detroit, heretofore engaged in the production of wood dashes, is preparing to place a taxicab in the market in the near future.

The Ford Motor Company, Detroit, announces that an 11-story building, to cost about $600,000, will be erected on Fifth street, Minneapolis, Minn., at least a portion of which will be utilized as an assembling plant for Ford cars.

The Duplex Power Car Company, Charlotte, Mich., has elected the following officers: President, Frank P. Town; vice president, Frank L. King; secretary, M. J. Lamson; treasurer, T. L. Gillet. James H. RECENTLY ANNOUNCED 1914 MODELS.

Reo—Reo Motor Car Company, Lansing, Mich. Reo the Fifth, fall series. Touring car and roadster, now equipped with electric starter, lights and horn, speedometer, mohair top, curtains, envelope, extra demountable rim, etc. Body is of new design. Instrument board and all instruments set flush. Electric searchlights have dimming arrangement. New design ventilating windshield. New style tire carrier holds rear light and number plate. Transmission has been changed with a view to silence and maximum efficiency. Wheels are 34 inches diameter with demountable rims; tires, 24 by four inches front and rear. Both brakes operated by pedal. Price, $1175.

American—American Motors Company, Indianapolis, Ind. Type 646, six-cylinder, six-passenger touring car. In many respects the chassis is identical with type 644, the principal changes being the lengthening of the wheelbase to 140 inches, a motor of 4.25-inch bore and 5.5-inch stroke, and a new and improved electric equipment, the last named comprising two distinct units, both mounted in one housing. Cylinders are cast en bloc, but with separate exhaust ports for each, the manifold being bolted and easily removed. Body is a streamline design, with high flush sides and deep seats. Price, $2950.

Wahl—Wahl Motor Company, Detroit. Two-passenger roadster and five-passenger touring car; one chassis. Motor, clutch and transmission in a unit. Four-cylinder, cast in pairs, 3.25-inch bore, 5.5-inch stroke. Constant level splash lubrication, pump circulation. Thermo-syphon cooling. Bosch magneto. Holley carburetor. Multiple disc clutch, Raybestos lined. Three forward speeds and reverse. Salisbury semi-floating rear axle. Semi-elliptic springs front, full elliptic rear. Tires, 32 by 3.5 inches. Right hand drive, centre control. Equipment includes Prest-O-Lite tank, gas headlights, oil side and tail lamps, speedometer, windshield, mohair top, top envelope, etc.

Chalmers—Chalmers Motor Company, Detroit. Model 24. Motor, six-cylinder, T head, en bloc, all mechanism enclosed, four-inch bore, 5.5-inch stroke. Clutch, multiple disc. Transmission, four speeds forward and reverse. Left hand drive, centre control. Six body types, streamline design, tapered bonnet, side lamps eliminated, clean running boards. Price, $2175.

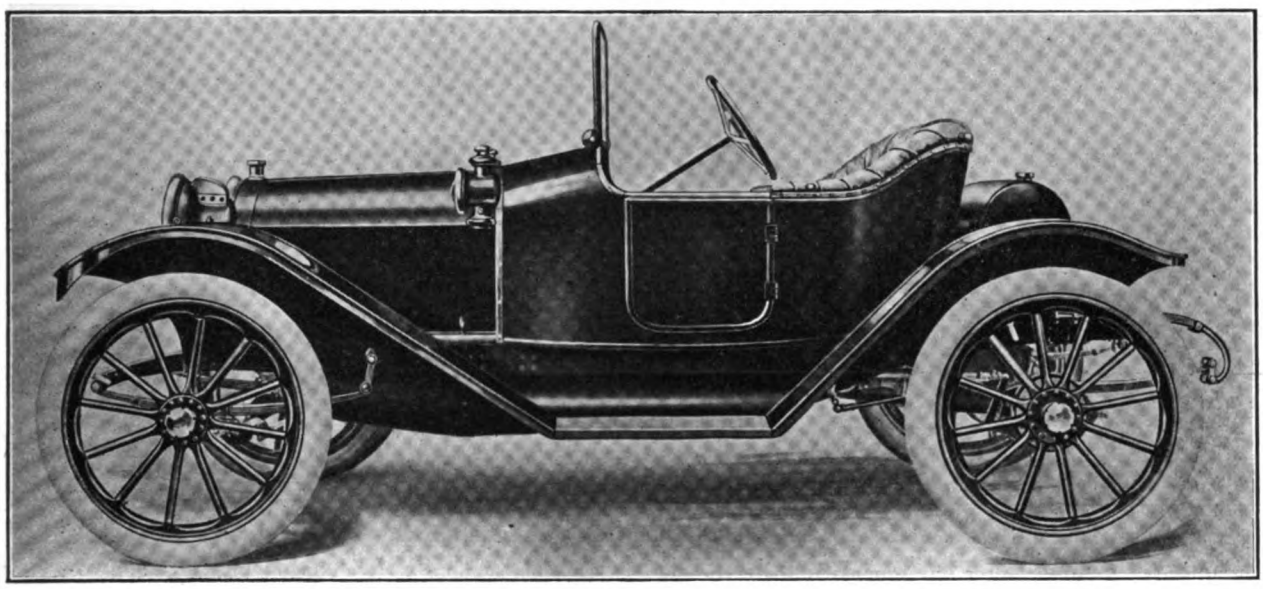
Pathfinder—Motor Manufacturing Company, Indianapolis, Ind. Five-passenger touring, two-passenger roadster, two-passenger cruiser and Martha Washington coach. Practically the same as previous models. Motor is the same except for lighter pistons and connecting rods, said to result in about 20 per cent. increase in power capacity. Some minor improvements in body design and equipment. Prices, $2160 to $2185.

Vulcan—Vulcan Manufacturing Company, Painesville, O. Model 27. Two-passenger speedster and five-passenger touring car coming. Motor, four-cylinder, L head, en bloc, 3.375-inch bore, five-inch stroke. Lubrication, combination positive feed and constant level splash. Thermo-syphon cooling. High-tension magneto. Unit power plant, three point suspension. Cone clutch. Selective transmission, three speeds and reverse. Semi-floating rear axle. Service brakes, external contracting; emergency, internal expanding. Semi-elliptic springs forward, three-quarter elliptic rear. Clincher rims with 32 by 3.5-inch tires. Left hand drive, central control. Price, $750.

National—National Motor Vehicle Company, Indianapolis, Ind. Series V-3. Five and seven-passenger touring, four-passenger toy tonneau, two-passenger speedster and two-passenger semi-racing roadster. All fitted with Gray & Davis electric lighting and starting system. Changes practically confined to minor refinements in design and construction. Prices, $2750 to $3400.

Overland—Willys-Overland Company, Toledo, O. Model 79. Touring car and roadster. But one chassis this year. Overland characteristics of model 69 continued. Larger motor, bore increased to 4.125 inches; stroke remains the same, 4.5. Valve mechanism changed, a new type of valve plungers being utilized. A yoke or dog, which bolts at the centre to the crankcase, retains two plungers for each cylinder. By displacing these drop forged yokes the pushrods may be removed without disturbing the camshaft. Intake manifold has been redesigned, having smaller diameter, and yokes replace flange method of retention. Constant level splash lubrication, a gear pump supplying connecting rod through four leads. Wheelbase has been lengthened slightly. Other minor changes. Price, $950; with Gray & Davis starter and generator, $1075.

Partin-Palmer—Partin Manufacturing Company, Chicago. Model 38. Six-passenger touring car. Motor, entirely new design, valve-in-the-head, four-cylinder, en bloc. Lubrication, constant level splash and circulation by gear pump. Thermo-syphon cooling. Stromberg carburetor. Briggs dual system of ignition, magneto and six dry cells. Clutch, leather faced cone. Transmission, amidships, selective, three speeds and reverse. Three-quarter floating rear axle. Semi-elliptic springs forward, three-quarter elliptic rear. Left hand drive, centre control. Goodyear quick detachable, quick demountable rims; 32 by 3.5-inch tires. Price, $975.



The New Vulcan "27" Speedster Model, Produced by the Vulcan Manufacturing Company, Painesville, O.

Case—J. I. Case Threshing Machine Company, Racine, Wis. Models 25, 35 and 40, all four-cylinder. Model 40 continued from last season, with improvements, including: Bosch two-point ignition, new type of Rayfield carburetor, heavier rear axle shafts and new cowl board. Model 25 has unit power plant, T head engine, 3.75-inch bore, 4.75-inch stroke. Plunger pump lubrication with auxiliary splash. Cooling by centrifugal pump. Bosch duplex ignition. Non-water jacketed Rayfield carburetor. Disc clutch. Three forward speeds and reverse. Weston-Mott three-quarter floating rear axle. Rear springs, platform type, with cross piece linked freely to semi-elliptic side members. Tires, 32 by four inches on quick detachable rims. Left hand drive, centre control. Model 35 differs principally as follows: Motor, 4.125-inch bore, 5.5-inch stroke. Gear pump lubrication. Bosch dual ignition. Water jacketed carburetor. Full floating rear axle. Three-quarter elliptic rear springs. Tires, 35 by 4.5 inches. All models equipped with Westinghouse electric lighting and starting system, Warner speedometer, eight-day clock, electric horn, extra tire on rim, two extra inner tubes, tire cover, Weed chains, top, windshield, spark plug pump and full set of lights. Prices, $1250, $1850 and $2300.

PERSONAL NEWS OF THE INDUSTRY.

Mrs. Oscar Meirowsky, who as Miss Dorothy Kane was well known in the industry through her connection with the advertising department of the Abbott Motor Company, Detroit, is enjoying a vacation trip abroad, on which she will combine business and pleasure. Mrs. Meirowsky is now advertising and publicity manager for the Abbott-Detroit Motor Company, New York City distributor for Abbott-Detroit cars.

Mrs. Oscar Meirowsky, Advertising and Publicity Manager.

Harry Miller, Los Angeles, Cal., inventor of the Miller carburetor, and later connected with the New Miller Carburetor Company, has brought out another carburetor, which he terms the Master.

Raymond G. Coghlan has been appointed advertising manager of the Moon Motor Car Company, St. Louis, Mo. He is secretary of the Moon Motor Car Company of New York and will retain his headquarters in the latter city.

Otis Funderbunk, formerly Michigan manager for the Rayfield carburetor, has been appointed sales manager of the carburetor division of the Detroit Lubricator Company, Detroit, maker of the Stewart.

Clyde Barnard, president of the Nebraska State Horticultural Society, has succeeded Frank O. Moberg as general manager of the Rex Automobile Company, Omaha, Neb.

William B. Moseley, formerly with the Goodyear Tire & Rubber Company, is now travelling representative for R. M. Owen & Co., New York City distributor for Reo cars, in the eastern district.

H. H. Leckler, formerly a member of the engineering staff of the International Harvester Company of America, Chicago, has become mechanical engineer for the Emil Grossman Company, New York City.

A. G. Sutherland, formerly assistant manager of the Ford branch in Columbus, O., has accepted a position with the Columbus Buggy Company of that city.

W. C. Boone, who was office manager of the Detroit branch of the Jones Speedometer Company, has returned to the factory in New Rochelle, N. Y., where he will maintain headquarters for the present.

Frederick C. Harrington has succeeded L. C. Harmon as sales manager of the Myer Abrams Company of Boston, New England distributor for the Lauth-Juergens truck.

William J. Pearmain, formerly of the Packard experimental staff and later general inspector for the Olds Motor Works, has taken charge of the experimental work for the Mitchell-Lewis Motor Company, Racine, Wis.

O. W. Dansie has succeeded Arthur H. Mertz, resigned, as manager of the Gerlinger Motor Car Company, Seattle, Wash.

John B. Richards, for the last nine years superintendent of the Springfield Metal Body Company, Springfield, Mass., has been appointed manufacturing superintendent of the Stevens-Duryea Company, Chicopee Falls, Mass., thus enabling George W. Kerr to devote his entire time to the designing and engineering departments.

H. T. Helfer has resigned as sales manager of the Racine Manufacturing Company, Racine, Wis.

Alfred Golde, inventor of the Golde patent automobile top, and owner of three large factories in Europe, has been visiting his branch factory in New York City.

Fred W. Dart, Hartford, Conn., has secured the Oldsmobile agency for the Palace Auto Station.

C. A. Forster has resigned as commercial manager of the Maxwell Motor Company, Detroit, and it is understood that he will return to the Burroughs Adding Machine Company.

Charles LaPorte, formerly with the United States Motor Company, has been appointed chief engineer of the Aristos Company, New York City, where he will have charge of the design and production of the Mondex shock absorber and other devices bearing that name.

E. H. Hand, for several years a prominent figure in the automobile industry as district manager and assistant sales manager of the E. R. Thomas Motor Car Company, and later as district manager in Ohio and Pennsylvania for the Abbott Motor Company, has joined the staff of the J. I. Handley Company, Indianapolis, selling agent for Marion and American cars. He will supervise the sale of the Marion machine in the district which includes Cleveland, Pittsburg, Buffalo, Philadelphia, Baltimore and Washington.

John C. Stiles, who has been connected with the Indianapolis branch of the Stewart-Warner Speedometer Company, has been appointed western representative with headquarters in St. Louis.

Harold Van Baalen has resigned from the sales force of the Grinnell Electric Company, Detroit, to become general manager of the Electric Automobile Company of that city, distributor of the Standard electric line.

Robert R. Ramey has been appointed southern district manager for the Lozier Motor Company, Detroit, maker of Lozier cars, with headquarters at New Orleans, La. Mr. Ramey began his connection with the automobile industry in 1906, with the Eastern Automobile Company, Philadelphia, representative of the Lozier company.

W. E. Wardlaw, for some time New York branch manager for the Schoen-Jackson Company, maker of the Feps carburetor, has resigned to enter the service of another carburetor manufacturer.

Fred A. Crooks, formerly New York City sales manager for the Alco, has joined the sales staff of the Harry S. Houpt Company, New York distributor for Lozier cars.

William G. Houck, formerly sales director of the Keeton Motor Company, Detroit, has retired from that concern to devote his entire time to the sale of Carnation cyclecars, made by the American Voiterette Company of that city.

L. E. Blocker, who has been connected with the Chalmers Motor Company, Detroit, since its organization, has been appointed assistant sales manager, succeeding Fred W. Nichols, who has been made district sales manager for New England.

Donald G. Small has been appointed road expert with the service department of the Hudson Motor Car Company, Detroit, his territory embracing Indiana, Illinois, Kentucky and Tennessee. He will make his headquarters in Indianapolis.

James Chisholm has been appointed superintendent of the B. & R. Rubber Company, Worcester, Mass., vice James A. Wade, resigned.

L. R. Acton has been appointed manager of the recently organized Tiffany Electric Car Company, Pontiac, Mich.

E. F. Warren, an automobile engineer of wide experience, has joined the staff of the Studebaker Corporation, Detroit, being connected with plant No. 10.

J. S. Conwell, one of the best known automobile salesmen on the Pacific Coast, has been appointed manager of the Haynes Auto Sales Company, with headquarters in Los Angeles, and with branches in southern California and Arizona.

William H. Cameron, who was until recently associated with the Michigan Motor Car Company, Kalamazoo, Mich., as designer and engineer, has joined the forces of the Lewis Spring & Axle Company, Jackson, Mich., where he will have an interest in the development of the Clark motor plant.

W. H. Cameron, with Lewis Spring & Axle Company.

E. S. Maddock, who has been with the company since 1908, has resigned as assistant secretary of the Thomas B. Jeffery Company, Kenosha, Wis.

C. H. Martin, formerly local branch manager for the Premier Motor Car Company, Pittsburg, Penn., has become sales manager for the H. J. Lange Motor Car Company of that city, maker of Lange trucks, etc.

Edward Breed, for some years with the Anchor Buggy Company, and more recently with the Continental Car-

Digitized by Google

riage Company, Cincinnati, O., is now sales manager for the O. Armleder Company of that city, maker of motor delivery wagons.

J. W. Sheler, Dallas, Tex., has resigned as manager of the United Motors Company to go into business for himself.

Frank Shaw, who has been connected with Frank J. Enger in the manufacture of Enger automobiles, has become general superintendent of the Rock Hill Buggy Company, Rock Hill, S. C.

H. B. Lewis, for some time past assistant manager of the J-M Shock Absorber Company in Los Angeles, Cal., has been promoted to become manager.

Harry Wolever, who was identified with the Whitten-Gilmore Company in Boston, Mass., for a long time, is now with J. H. MacAlman, Boston agent for Stearns cars.

Lewis A. Austin has been appointed general manager of the truck department of the O. Armleder Company, Cincinnati, O.

Frank W. Mailing has severed his connection with the Mais Motor Truck Company, Indianapolis, Ind., and joined the sales forces of the Stewart Iron Works Company, Cincinnati, O.

L. E. Rood has been appointed manager of the Rambler branch in Chicago, succeeding Z. C. Elkin, who has entered business for himself.

George A. Urquhart, manager of the White company's branch in Dallas, Tex., has been transferred to San Francisco, succeeding C. A. Hawkins, who has resigned to devote his time to other personal interests on the Pacific Coast.

J. G. Tennant, treasurer of the Tennant Motor, Ltd., Chicago, is a prominent figure in the sales end of the industry in the Middle West, having been local representative for the Simplex car for a number of years. The Tennant Motor, Ltd., has recently been selected by the National Motor Vehicle Company, Indianapolis, Ind., as the Chicago sales agent for the National car, largely because of Mr. Tennant's wide acquaintance and business ability.

J. G. Tennant, Treasurer, Tennant Motor, Ltd.

A. C. Platt, formerly connected with Wyckoff, Church & Partridge, Inc., New York City, has been appointed manager of the American branch of Commer Cars, Ltd., Luton, England, which has decided to place its Commer trucks in the American market direct.

E. T. Georges, formerly consulting engineer of the General Motors Company, has been appointed superintendent of the Chase Motor Truck Company's plant in Syracuse, N. Y. J. W. McDonald also is in the Chase employ as master mechanic.

George Uehlein, president of the Universal Motor Truck Company, has established his office at the factory in Detroit, removing from Milwaukee.

H. T. Curtis has been appointed manager of the Boston branch of the Invader Oil Company. He has been in the oil line all of his business life, having been identified with the old Havoline Oil Company and later with the Wolverine Oil Company.

L. M. Bradley, for some time past associated with the Willys-Overland Company, and before that with the United States Motor Company, has been appointed advertising manager for the Moline Automobile Company, East Moline, Ill.

Harry M. Newman, sales manager for Chicago, has been appointed manager of the Moon Motor Car Company of Illinois, succeeding E. N. Sanders, who becomes western sales manager, in charge of the states lying west of the Rocky mountains. Mr. Newman went to the Moon company in March, having previously been sales manager of the Washington Automobile Company, Washington, D. C.

Edwin R. Thomas, formerly identified with the E. R. Thomas Motor Car Company, Buffalo, N. Y., has purchased the old plant of that concern and is having it fitted for light manufacturing purposes.

Henry Frank, formerly with the Motz Tire Company in Boston, Mass., has resigned to accept a position with the Swinehart Tire Company in that city.

James A. Wright, one of the leading automobile body designers in New York City, has joined the staff of A. J. Monday, Milwaukee, Wis., one of the best known automobile body manufacturers in the State of Wisconsin.

F. H. Freeman, for some time identified with the Henley-Kimball Company in Boston, has resigned to become sales manager of the Stutz Motor Car Company in that city.

W. McK. White, one of the best known salesmen in the industry, has resigned from the Marion Motor Car Company, Indianapolis, Ind., to become sales manager of the Esterline Company of that city. He will have charge of the distribution of Golden Glow lamps, as well as electric lighting and starting systems, while the electrical instrument business of the company will remain in charge of Mr. Hansell, as formerly.

W. McK. White, Sales Manager, Esterline Company.

E. A. Scheu, manager of the Boston branch of the Invader Oil Company, has been appointed general manager of the company. Mr. Scheu is well known in New England, having been with the Packard agency in Boston from 1903 to 1908, and since that time with Invader oil, formerly in charge of the Boston branch of Chas. F. Kellom & Co., and since the organization of the Invader Oil Company with that concern.

L. R. Connolly, Chicago, for a number of years traffic manager for the International Harvester Company of America, has accepted the same position with the J. D. Maxwell Motor Corporation, Indianapolis, Ind.

Frederick J. Haynes, formerly factory manager of the H. H. Franklin Manufacturing Company, Syracuse, N. Y., has become factory manager for Dodge Bros., Detroit.

Edward Fleming of the United States Tire Company's branch in Los Angeles, Cal., succeeds R. E. Dougherty as office manager in Seattle, Wash.

Theodore F. Millington, formerly with the General Motors Company, Detroit, until he became interested in the Edward J. Budd Manufacturing Company, has closed a contract to handle the entire factory output of the Detroit Body Company.

R. D. Anderson, Warren, O., dealer in American underslung cars, made by the American Motor Car Company, Indianapolis, Ind., adopted a unique method of advertising in the construction of the new garage and salesroom opened recently. Mr. Anderson so designed his new building that the front is almost an exact reproduction of the front elevation of the American machine, being built to resemble the radiator. The design has been carried out in detail, showing even the eagle which surmounts the radiator filler cap on the car, as will be noted by the accompanying illustration.

R. D. Anderson's American Car Agency in Warren, O.—Note Shape of Building Front.

The Hall Rubber Company, 1402 Ridge avenue, Philadelphia, has taken the agency for Motz tires, made by the Motz Tire & Rubber Company, Akron, O., and will handle this product in eastern Pennsylvania, Maryland and Delaware. R. McAllister, 6813 Greenway avenue, Philadelphia; garage, $3500.

FOREIGN TRADE OPPORTUNITIES.

(Address Bureau of Foreign and Domestic Commerce, Washington, Giving Number, Which Will Forward Correspondence, Unless Otherwise Stated.)

11,589, Motorcycles—An American consul reports that an automobile dealer in his district has decided to investigate the desirability of importing motorcycles from the United States and desires to be placed in communication with an American manufacturer. Another dealer, an important and enterprising importer of motor vehicles, is disposed to try the sale of American motorcycles if satisfactory arrangements can be made with American manufacturers. Catalogues and full information are desired as to prices of motorcycles that can be sold f. o. b. New York at from $60 to $100. Owing to the fact that American automobiles are sold in the country in question, it will be easier to introduce American motorcycles than would otherwise be the case.

11,590, Gasoline Engines, Waste, Oils, Etc.—An American consular officer in Canada transmits the name and address of a local merchant who desires to enter into communication with American manufacturers of gasoline engines, waste, oils of all kinds, etc.

11,591, Machinery for the Manufacture of Ball Bearings—The owners of a foreign foundry and machine shop have decided to go into the manufacture of ball bearings, and the capital stock will be increased to $268,000. It is reported that all of the new stock will be taken by those already holding old shares. An American consul writes that the company has purchased a number of patents, and the erection of new shops and the purchase and installation of the necessary machinery will be undertaken as soon as possible. Much of the machinery now in use is said to be of American manufacture, and it is possible that this new departure will offer an opportunity for further sales of American machinery of this class. Correspondence should be addressed to the managing director of the company.

11,599, Automobile—Inquiry has been made at an American consulate for the description and price of a six-passenger automobile. The would-be purchaser wants a low priced car of light or medium weight, but with sufficient power to climb steep hills with a full load. Manufacturers who are interested should send descriptions and prices to the consulate in question for transmission to the inquirer.

11,603, Road Oils and Paving Materials—A commission merchant in the Levant informs an American consulate that he desires quotations from American manufacturers of road oils and similar dust laying preparations, asphalt for road and pavement construction, pavement tiles, etc. Prices are desired c. i. f. the Levant port in question, and correspondence should be in French.

11,606, Automobiles—An American consular officer reports that a business firm in France desires to take up the French agency of an American factory turning out low priced automobiles.

11,608, Graphite Machinery—A mining engineer and prospector in Madagascar has written an American consulate that he desires to be put in communication with American manufacturers of machinery suitable for crushing, cleaning and classifying graphite. Great progress is being made in graphite mining in Madagascar and suitable machinery for working this mineral should find a good demand.

11,612, Automobiles—A resident of a foreign country informs an American consulate that he desires to receive catalogues and price lists of automobiles. Prices and discounts also should be given. It would greatly facilitate the placing of orders for cars if c. i. f. quotations could be made. Catalogues should also be sent to another person named in the report.

11,623, Automobile and Motorcycle Accessories—Two European commission firms have written an American consular officer that they are anxious to enter into relations with American manufacturers of accessories for the automobile, cycle and motorcycle trades.

11,634, Fire Engine—Tenders are invited for supplying a new steam or petrol motor fire engine, capacity 350 to 450 gallons a minute, for the Gainsborough Urban District Council, England. Further particulars may be obtained upon application to Mr. S. W. Parker, engineer and surveyor.

Gas Engine Governor, Charles White, Baltimore, Md. No. 1,071,193. Filed Nov. 27, 1912.

Demountable Tire Rim, Martin H. Collom, Denver, Col., assignor to the Collom Demountable Rim Manufacturing Co. of the same city. No. 1,071,206. Filed April 29, 1912.

Motorcycle Seat and Support, John L. Miller, Paulsboro, N. J. No. 1,071,255. Filed Dec. 4, 1912.

Internal Combustion Engine Starter, Thomas E. Plater and Edward B. Rees, Monett, Mo. No. 1,071,260. Filed Nov. 11, 1909.

Tilting Auto Truck, Gustav Schlatter, Arbon, Switzerland. No. 1,071,265. Filed Sept. 19, 1912.

Strainer, William H. Finigan, Sharon Hill, Penn., assignor to the Gilbert & Barker Manufacturing Co., New York City. No. 1,071,306. Filed Oct. 15, 1910.

Match Starter for Internal Combustion Engine, Marvin Marsden, Edgerton, Wis., assignor of one-half to E. M. Ladd of the same place. No. 1,071,327. Filed April 28, 1911.

Vehicle Frame, Charles J. Pembroke, Rochester, N. Y. No. 1,071,335. Filed April 5, 1905.

Tire Saver, Le Roy Wilbour, Ashland, O., assignor to the Ashland Manufacturing Co. of the same place. No. 1,071,378. Filed Jan. 6, 1913.

Non-Skidding Device, Harry J. Hernshiem, Pleasant Prairie, Wis. No. 1,071,418. Filed Oct. 8, 1912.

Engine Starter, Alvan O. Levick and William H. Hussey. No. 1,071,444. Filed Jan. 20, 1911.

Vehicle Chassis, Sheridan Babcock, Iowa Falls, Ia. No. 1,071,498. Filed March 13, 1812.

Shock Absorber, Towson Hand, Orlando, Fla. No. 1,071,518. Filed June 3, 1913.

Automobile Signal, Harold M. MacCausland, Worcester, Mass. No. 1,071,525. Filed March 8, 1912.

Muffler, Nathaniel Rapp, assignor to the Commercial Trust Company of the same city. No. 1,071,528. Filed Oct. 28, 1912.

Identifying Means Device, Oscar A. Weissenborn, Jersey City, N. J. No. 1,071,540. Filed Dec. 27, 1912.

Support for Spare Wheels, Charles Grant Hilton and George Tom Hilton, Loughborough, England, assignors to the Rotax Motor & Cycle Co., London, England. No. 1,071,553. Filed Nov. 11, 1909.

Searchlight Reflector, Charles Algernon Parsons and George Gerald Stoney, New-Castle-upon-Tyne, England, said Stoney assignor to said Parsons. No. 1,071,569. Filed June 13, 1910.

Puncture Repair Plug, Clyde R. Tyrrell, Montesano, Wash., assignor to the Terrell Manufacturing Company of the same place. No. 1,071,595. Filed May 17, 1912.

Lubricating System, Harvey F. Maranville, Akron, O., assignor to the Perfection Spring Company, Cleveland, O. No. 1,071,623. Filed Feb. 24, 1910.

Packing Ring, Louis E. McQuay, Webster Groves, Mo., and William K. Norris, East St. Louis, Ill. No. 1,071,647. Filed May 1, 1913.

Tire Protector, Julius Brotschneider, San Francisco, Cal. No. 1,071,695. Filed June 5, 1913.

Tire Armor, George Edward Hanson, Atlanta, Ga. No. 1,071,741. Filed Nov. 6, 1912.

Automobile Lock, Philip Kovsky and John F. Hicks, Philadelphia, Penn. No. 1,071,756. Filed May 3, 1913.

Motor Starting Mechanism, Hubert Meredith-Jones, New York City, assignor to the Columbia Nut & Bolt Co. of the same city. No. 1,071,775. Filed June 24, 1912.

Automobile Lamp, Oscar O'Neal, Fremont, Mich. No. 1,071,783. Filed Nov. 8, 1912.

Number Display Device, Elgin Stoddard, San Francisco, Cal. No. 1,071,821. Filed June 5, 1912.

Explosive Engine, Elmer E. E. Sutphin, Davenport, Ia. No. 1,071,823. Filed July 26, 1912.

Carburetor, Frank H. and Frederick O. Ball, Plainfield, N. J. No. 1,071,858. Filed Jan. 11, 1912.

Tire Pressure Indicator & Signal, Charles C. Cleveland, Boulder, Col. No. 1,071,880. Filed April 6, 1912.

Lamp Structure, Charles E. Godley, Detroit, assignor to the Edmund & Jones Manufacturing Co. of the same city. No. 1,071,907. Filed Sept. 1, 1911.

Top Raising and Lowering Device, Chester K. Hahn, Columbus, O. No. 1,071,914. Filed Dec. 24, 1910.

Tire Pump, Joseph E. LaForce, North Grafton, Mass., assignor to the Alsten & Goulding Company, Worcester, Mass. No. 1,071,929. Filed June 24, 1912.

Piston Ring Remover, William C. MacKinnon, Newark, N. J. No. 1,071,934. Filed Jan. 7, 1912.

Internal Combustion Engine, Paul Spranger, Gera-Reuss, Germany. No. 1,071,967. Filed April 25, 1911.

Motor Starter, Albert A. Stillman, Syracuse, N. Y. No. 1,071,969. Filed May 23, 1910.

Cranking Device, James B. Eastes, Konawa, Okla. No. 1,071,990. Filed June 26, 1911.

Clutch, Frederick S. Ellett, Elmira, N. Y. No. 1,071,992. Filed April 15, 1912.

Wrench, Walter Herbert Cook, London, England. No. 1,072,090. Filed March 30, 1912.

Fender, Samuel Fleischmann, Indianapolis, Ind., assignor of one-half to Joseph Braun of the same city. No. 1,072,108. Filed May 22, 1911.

Automatic Headlight, Cicero T. Hammack, Knoxville, Tenn. No. 1,072,114. Filed March 22, 1912.

Wheel, Arthur F. Hawksley, Fairhaven, England. No. 1,072,226. Filed April 14, 1911.

Resilient Tire, Frank Reed, Omaha, Neb. No. 1,072,260. Filed Aug. 28, 1912.

Engine Starter, Gregory John Spohrer, Franklin, Penn., assignor to the Wilson Motor Starter Company of the same place. No. 1,072,267. Filed June 29, 1911.

Gas Engine Primer, Claude A. Brooks and Evan G. Kinley, Topeka, Kan. No. 1,072,304. Filed April 5, 1912.

Gas Engine, Charles E. Sargent, Chicago. No. 1,072,366. Filed Feb. 8, 1911.

Carburetor, Herbert W. Alden, Hartford, Conn., assignor to the Columbia Motor Car Company of the same city. No. 1 072,376. Filed April 15, 1905.

Motor Starter, John F. Kelly, Chicago. No. 1,072,385. Filed Jan. 26, 1912.

Convertible Body, George C. Plummer, Washington, D. C., assignor of one-half to Frank E. Plummer of the same city. No. 1,072,394. Filed Oct. 21, 1912.

COMING EVENTS.

September.

Sept. 26-27—Track races, Peoria, Ill.
Sept. 26-29—Convention, State Firemen's Association, New Bedford, Mass.
Sept. 27—Track races, White Plains, N. Y.
Sept. 27—Track races, San Marcos, Tex.
Sept. 27-28—Track races, Bakersfield, Cal.
Sept. 28—Hill climb, Mont Verdun, France.
Sept. 29-Oct. 4—American Road Congress, Detroit, Mich.

October.

Oct. 3—Track races, Trenton, N. J.
Oct. 3-4—Track races, Oklahoma City, Okla.
Oct. 4-11—Around Lake Michigan tour, Chicago, Ill.
Oct. 6-18—Show, St. Louis, Mo.
Oct. 11—Track races, Springfield, Ill.
Oct. 12-17—Convention, American Institute of Metals, Chicago, Ill.
Oct. 12-17—Convention, Carriage Builders' National Association, St. Louis, Mo.
Oct. 13-18—National fire prevention conference, Philadelphia, Penn.
Oct. 15-25—Electrical Show, Grand Central Palace, New York.
Oct. 17-27—Automobile Salon, Grand Palais, France.
Oct. 18-19—Track races, St. Louis, Mo.
Oct. 24—Convention, American Iron & Steel Institute, Chicago, Ill.
Oct. 27-28—Convention, Electric Vehicle Association of America, Chicago, Ill.

November.

Nov. 2-3—Road race, El Paso, Tex.-Phoenix, Ariz.
Nov. 4-5—Road race, Los Angeles, Cal.-Phoenix, Ariz.
Nov. 4-5—Road race, San Diego, Cal.-Phoenix, Ariz.
Nov. 6—Track races, Phoenix, Ariz.
Nov. 8-12—Track races, Shreveport, La.
Nov. 7-15—Olympia Show, London, England.
Nov. 8-15—Show, Atlanta, Ga.
Nov. 24—Vanderbilt Cup race, Savannah, Ga.
Nov. 27—Grand Prize race, Savannah, Ga.

December.

Dec. 9-12—Convention, American Road Builders' Association, Philadelphia, Penn.
Dec. 10-12—Convention, Retail Implement & Vehicle Dealers' Association, Milwaukee, Wis.
Dec. 11-20—International exposition of safety and sanitation, American Museum of Safety, New York City.

January.

Jan. 3-10—Pleasure car show, Grand Central Palace, New York City.
Jan. 24-31—Pleasure car show, Coliseum, Chicago, Ill.
Jan. 26-31—Show, Scranton, Penn.
Jan. 31-Feb. 7—Show, Minneapolis, Minn.

February.

Feb. 2-7—Pleasure car show, Buffalo, N. Y.
Feb. 9-14—Truck show, Buffalo, N. Y.
Feb. 22-March 5—Show, Cincinnati, O.
Feb. 24-28—Show, First Regiment Armory, Newark, N. J.

March.

March 7-14—Pleasure car show, Mechanics' Building, Boston, Mass.
March 17-21—Truck show, Mechanics' Building, Boston, Mass.

DESIRABLE ACCESSORIES FOR THE DEALER.

(When Writing, Please Mention The Accessory and Garage Journal.)

Talking Horn.

A signalling device which presents interesting features, in that it may be utilized as a signalling horn or to produce sounds closely resembling the human voice, is the Talking Horn, manufactured by the Talking Horn Company, Middletown, N. Y. It resembles in appearance the conventional types of signalling members, but is manually operated, a small handle being fitted. When this is moved to certain positions, then rotated to the left, it is stated that it will talk, producing one of three phrases, "Hello Mama," "O Mama" and "Mama." The maker of the device claims that the resulting effect is pleasing to the pedestrians and that sound can be heard for a considerable distance. By rotating the handle anticlockwise a plain sound is produced. The positions for the different phrases are lettered on a dial under the handle and it is stated that with a little practise one can manipulate the handle without reference to the marks. The device comes finished in brass or nickel to match the car. The company also produces the O. B. horn, similarly operated, but without the talking feature, and one adapted to the motorcycle.

Cutler-Hammer Switch.

The Cutler-Hammer Manufacturing Company, Milwaukee, Wis., is producing a neat, compact single switch for lighting purposes, designed primarily for use with low voltage systems. It has a current carrying capacity of 10 amperes at 80 volts; operates with a quick make and break, and is a simple three-piece mechanism. The insulating material is both fire and water proof, and the mechanism cannot jar loose. The position of the push bar indicates whether the switch is open or closed, and a feature of the design is that it may be operated in concealed places, it being possible to tell by touch whether the switch is on or off. Pushing the button opens the circuit, thereby avoiding opportunity of accidentally closing the circuit in the day time and running down the battery when the lighted lamps would not be noticed. The face plates are supplied separately, have bevelled edges and are applied after the switch is installed and without cutting.

Se-Ment-Ol.

Se-ment-ol is manufactured by the Northwestern Chemical Company, Marietta, O., and is a colored powder like material which is soluble in water. When poured into a radiator it will dissolve easily and will remain in a fluid state until it comes in contact with a leak in the cooling system, when it will congeal, cementing the cavity. It takes but a short time for the cement to set, after which the radiator is flushed out with clean water. It is a chemical preparation and is held not to injure the cooler or impair its efficiency. Much of the deposits caused by the use of hard water is removed by its use. It comes in a small package and is inexpensive.

Noera Oil Gun.

The Noera Manufacturing Company, Waterbury, Conn., is marketing an improved oil gun which is provided with a crooked handle, facilitating its operation. The gun is 1.25 inches in diameter, eight long, and is constructed of a high grade brass, nicely polished. It will handle equally well, light or heavy oils, and is provided with a double plunger, one set drawing in the lubricant and the other forcing it out to the part to be lubricated. The Noera oil gun is also made with a round handle.

Old Sol Universal Lamp Bracket.

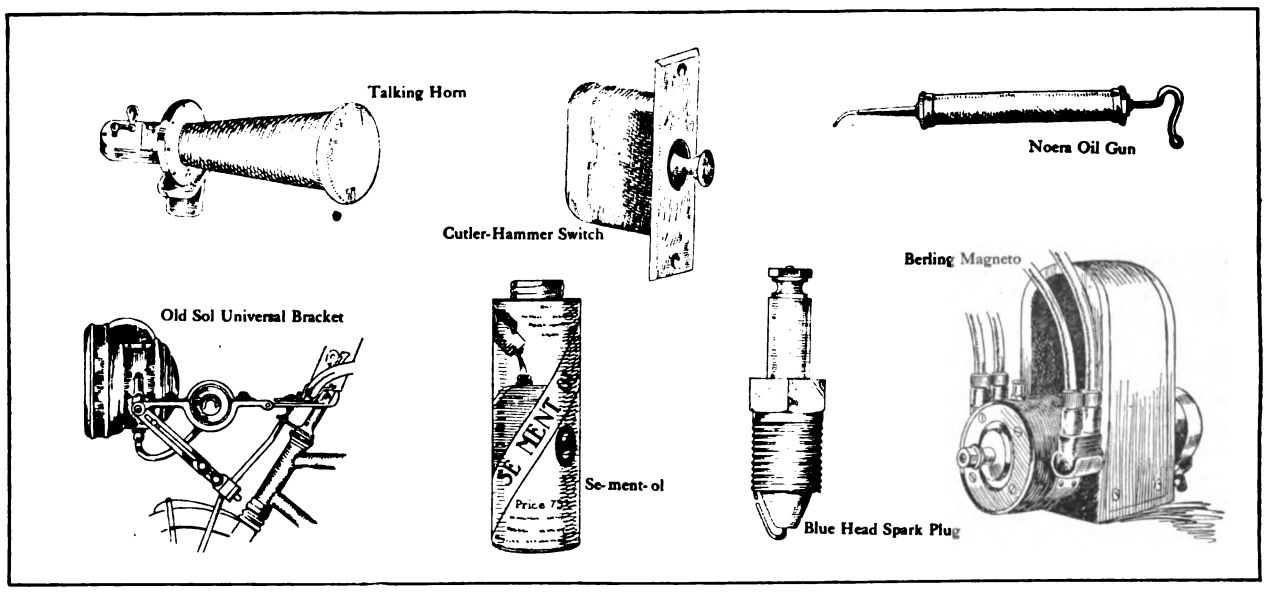
The Old Sol universal adjustable lamp bracket is the product of the Hawthorne Manufacturing Company, Bridgeport, Conn., and is designed especially for motorcycles. The maker states it will fit any standard make of machine. The bracket with the rigid truss type of clamps permits of mounting a gas tank, generator or storage battery and all makes of lamps. When the tank bracket is installed the company supplies bands for holding the tank in position. A flat plate punched with a hole and equipped with a locking device and bolts is furnished with the generator type.

Greenfield BX Cable.

The Sprague Electric Works of the General Electric Company, New York City, manufactures the Greenfield flexible steel armored cable, also known as the BX cable. It is a weather proof construction, possessing great mechanical strength, maximum flexibility and ability to withstand chafing. It is constructed with single or twin conductors.

Blue Head Spark Plug.

The Blue Head spark plug, manufactured by the Perpetual Spark Plug Company, 330 East Drinker street, Dunmore, Penn., is a popular priced plug and differs from ordinary design in that it is practically of one-piece construction. The central electrode is baked in the porcelain and the latter is placed in the shell by a similar process. This eliminates joints, gaskets, etc., making for a gas tight design. One of the features of the plug is the shape and location of the spark gap. The wire is bent upward to within a short distance of the shell, the maker stating that the construction prevents short circuiting by oil, also makes for easy cleaning.



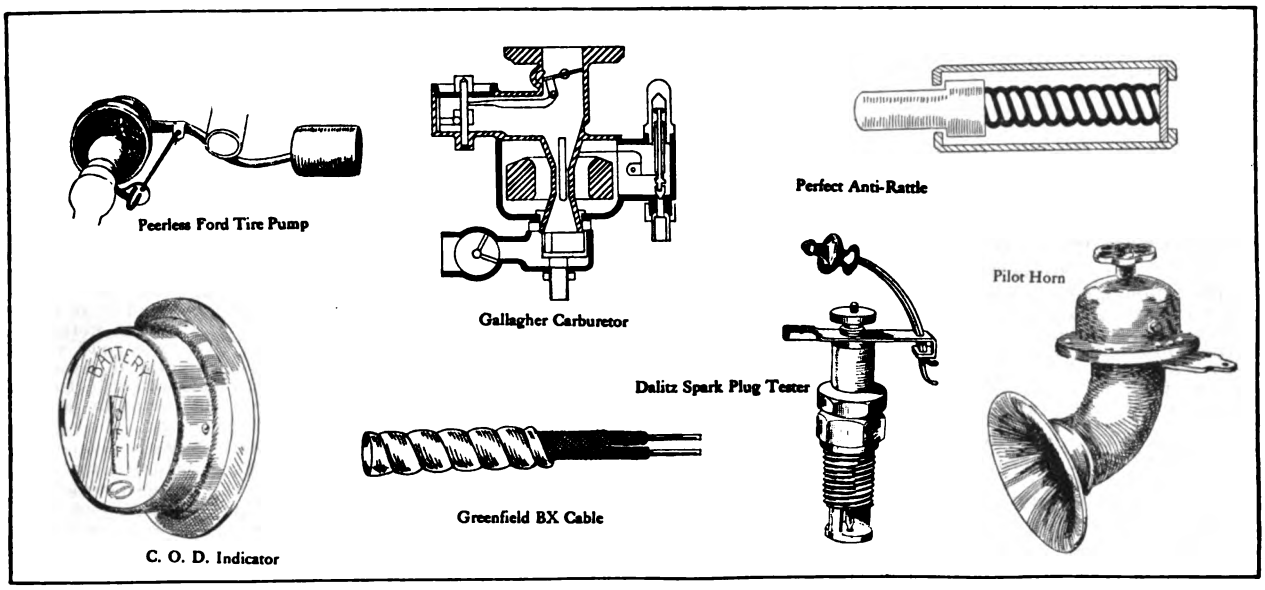
Berling Magneto.

A large spark, compactness of design and simplicity are emphasized with the Berling magneto, produced by the Ericson Manufacturing Company, 1119 Military road, Buffalo, N. Y. It is constructed for motor car and stationary engines, motorcycles, etc., and is held to be water, oil and dust proof. It is of the true high-tension type, and it is claimed that it will start a motor with the spark retarded and that throughout the best of material and workmanship are incorporated. The frame is a solid unit and all parts are easily accessible. The high-tension cables are so mounted that opportunity for short circuits by water is eliminated. The type N is supplied in one, two and four-cylinder models.

Gallagher Carburetor.

Among the features claimed for the Gallagher carburetor, made by the Gallagher Carburetor Company, Inc., 1876 Broadway, New York City, are: That it is mechanically operated without springs, cams or balls, and that there are no automatic movements to be affected by fuel and atmospheric changes. The supply of air and fuel is regulated mechanically and all parts are adjustable to meet requirements of service. Two jets are utilized, one being a fixed member, the other a mechanical, the latter coming into service when the throttle is opened. The fuel supply to this jet is operated independently from the fixed member by a mechanical needle which comes in contact with the nozzle when the throttle is closed, but rises when the throttle is opened, admitting

Digitized by Google



gasoline in proportion to the air. The fixed nozzle is supplied with fuel by a set needle valve and it has its own air intake. It is utilized for starting purposes and for low motor speeds. The needle valve controlling the flow of gasoline to the float chamber is adjustable by simply removing a screw cap. Provision is made for hot air or hot water heating, or both. It is stated that the carburetor is easily adjusted and provides maximum efficiency with a minimum consumption of fuel.

Peerless Ford Power Tire Pump.

Power tire pumps on the motor car are a valuable addition to the equipment, saving as they do the work of pumping by hand. The Peerless Accessories Manufacturers, 1926 Wabash avenue, Chicago, is marketing a design for model T Ford cars which is driven from the extension of the crankshaft of the motor and is attached by drilling a single hole. A special fan pulley is furnished to replace the old member, and it is claimed that the power pump may be installed easily. The pump cylinder is cast iron and the piston rings are carefully fitted. All bearings are brass. The pump is operated by a rod extending to the front of the radiator. The company claims it is the first pump to be driven from the engine shaft. It is moderately priced.

C. O. D. Indicator.

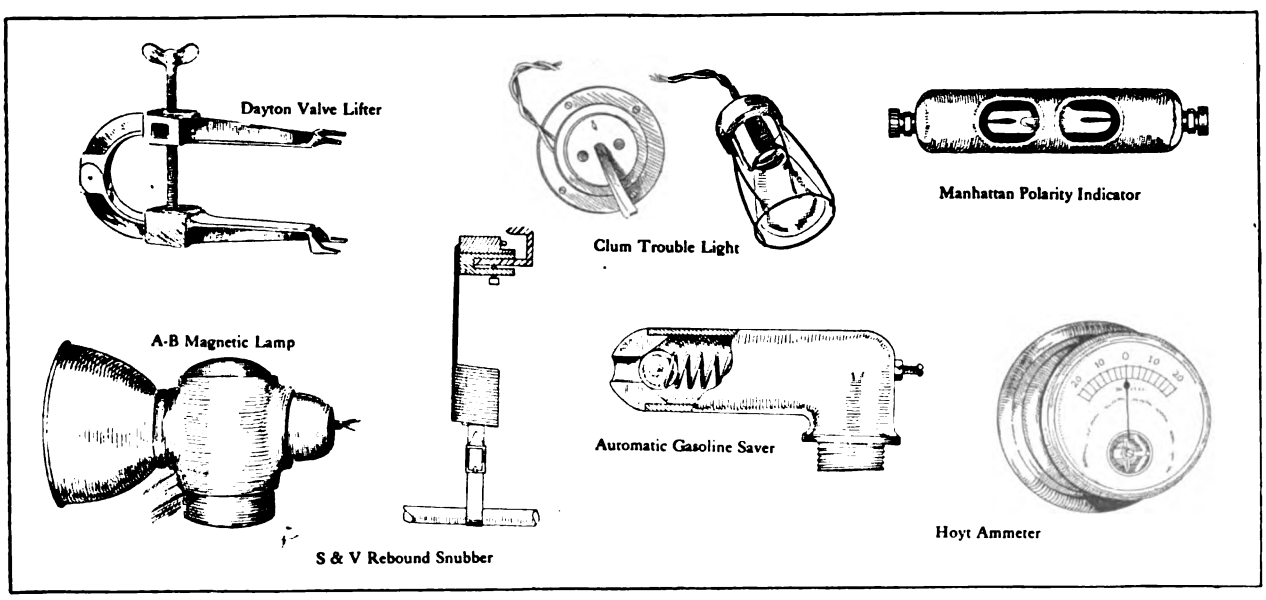
The Roller-Smith Company, 203 Broadway, New York City, maker of electrical equipment, has brought out a new current indicating device which is termed the C. O. D., from its three indications, "Charge," "Off" and "Discharge." It is designed for service with electric lighting and motor starting systems and to indicate whether the battery is being charged, discharged or the generator is inoperative. The device is located on the dashboard and has a rectangular dial opening through which in the condition shown appears the word "Off." When current flows from the generator through the indicator to the cells of the battery the word "Charge" immediately appears, no matter how slight the rate of current. When the battery is called upon to supply electricity to the lamps, for example, the word "Discharge" appears. It is claimed that no springs, cams, levers or mechanical multiplying means are employed, there being but one moving part. The circuit through the instrument is of heavy copper strap of a cross section greater than that utilized for the ordinary wiring circuit, so that losses are negligible, and there is no possibility of a burn out.

Perfect Anti-Rattle.

The Adams Manufacturing Company, Kansas City, Mo., is marketing the Perfect Anti-Rattle, which is designed to be placed between the door and jamb of a motor car body and to eliminate existing rattles due to warping or faulty fitting of the door. The device comprises a barrel member in which is a spiral spring. The design also includes a bumper or plunger as shown in the accompanying illustration. The barrel is constructed of brass and fits tightly into the hole bored in the door jamb. When the door is closed the spring pushes the bumper against the door, holding it firmly and eliminating, it is said, all rattling.

Dalitz Spark Plug Tester.

The usual method of locating a missing cylinder is to short circuit the second wire at the spark plug with magneto ignition or to hold down a vibrator with the coil and battery system. When using a screw driver for testing, one is likely to receive a shock unless care be exercised. The Dalitz Manufacturing & Sales Company, 803 Union street, Seattle, Wash., is marketing the Dalitz spark plug tester and terminal, which is a simple device for attachment to the plug. It comprises a flat strip of metal, having at one end a terminal for the reception of the secondary wire, and an opening at the other in which is inserted a movable arm of metal. This arm is equipped with a non-conducting handle, preventing any possibility



Digitized by Google

of shocks when using the device. To cut out the ignition to a cylinder the movable arm is slid downward until its end comes in contact with the base or shell of the plug. This effectually grounds or short circuits the current, preventing it from reaching the air gap. The device may be utilized for a number of other purposes, including that of testing the strength of the secondary current. This is performed by moving the arm in proximity to the base of the plug and noting the intensity of the spark. The tester may also be employed to note the compression of each cylinder when in operation, by the strength of the explosion. Another use for the device is locking the ignition. This is obtained by grounding each arm when the car is left unattended.

Clum Trouble Light.

The Clum Manufacturing Company, Milwaukee, Wis., has brought out a trouble light attachment which is designed for service with its standard model lighting switch, providing a means for attaching an inspection light without any additional wiring. The lamp is operated by a simple socket and plug connection, as shown in the accompanying illustration.

Pilot Horn.

The Pilot horn is the product of the Nonpareil Horn Manufacturing Company, 75 Wooster street, New York City. It is mechanically operated, dispensing with batteries, wires, etc., and there is no other expense involved than its first cost. It is operated by a small, conveniently located hand wheel, a slight turn of which produces a low and pleasing tone. The sound may be increased to a loud blast by increasing the speed of rotation, and the maker states that this construction permits a wide range of sound as desired. It is furnished with brackets for attaching to either the right or left hand side of the car, and is also made with a straight projector and a fore door bracket. The finishes are: All black, black and brass, black and nickel. A design for the steering column is constructed, a special bracket being made.

Dayton Valve Lifter.

The Dayton Malleable Iron Company, Dayton, O., is marketing a new valve lifter which is a U shaped member with integral tapered points. It may be utilized in the conventional manner or to compress the spring by placing the points between the coils. It is operated by a wing headed screw bolt having sufficient leverage to compress the spring with a minimum of effort, and one of the features of the device is that both hands may be used in displacing the locking mechanism of the valve, the tool remaining in a locked position. The maker states that it will fit all types of motors. It is moderately priced.

Manhattan Polarity Indicator.

In charging storage batteries, and in wiring some circuits, it is essential that polarity be observed, and this is not always easily determined as the identification marks may be obliterated. The Manhattan Electrical Supply Company, 17 Park Place, New York City, is manufacturing the Manhattan polarity indicator which, when connected in the circuit, will instantly detect the negative and positive poles. It is very compact, being 3.5 by .75 inch, and a nickel plated shell encloses and protects the glass tube from injury when carried in the pocket or in the tool box. It is made for battery service, also for service with current ranging from 50 to 600 volts.

A-B Magnetic Trouble Lamp.

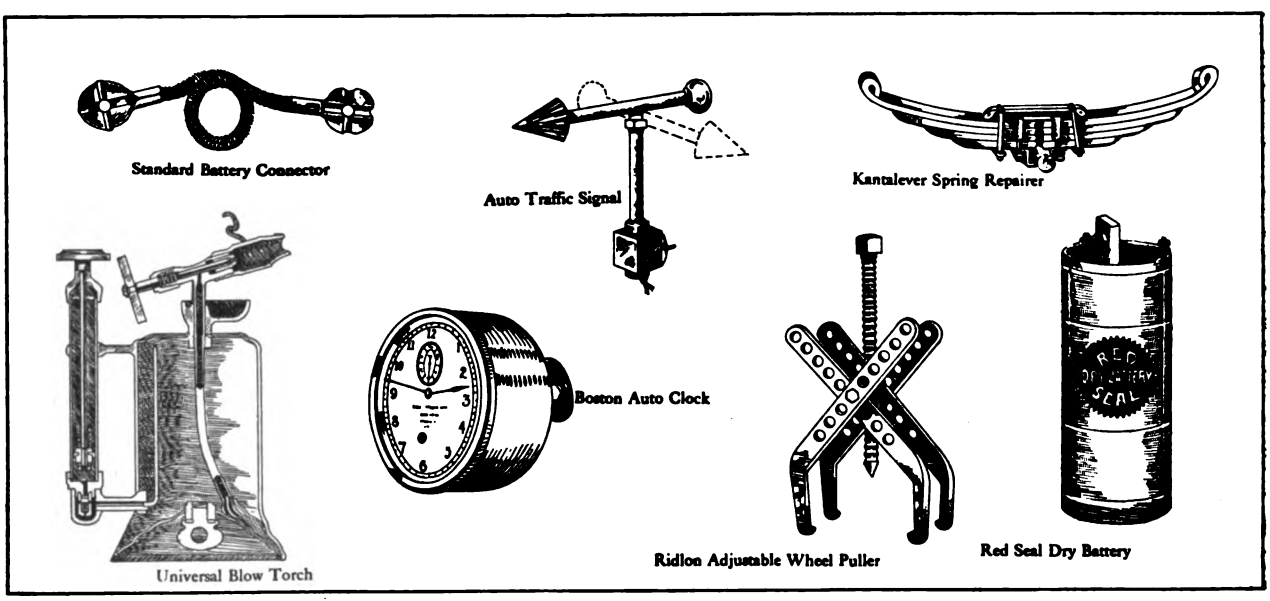
The Adams-Bagnall Electric Company, Cleveland, O., is marketing a handy trouble electric lamp that differs from the conventional designs in that it is of the magnetic type. It is equipped with a flexible lamp cord and terminals for attachment to the storage battery, and when the base of the lamp is placed in contact with iron or steel, it will stick. This is due to magnetism and it is claimed that the magnet has a pull of 13 pounds. The device makes for convenience in that it may be placed as desired, to project the rays onto the work and to permit the use of both hands when making adjustments or repairs. The magnet is covered with aluminum and the silver plated reflector is 2.5 inches in diameter. The light weighs but 13 ounces.

S & V Ford Rebound Snubber.

Sunvold & Larson, Sacred Heart, Minn., is manufacturing a rebound snubber designed especially for model T Ford automobiles. It comprises a strap, coil spring and a device for attaching to the frame and it is stated that it may be fitted without the drilling of holes, etc. The function of the snubber is to eliminate road shocks and to prevent undue recoil, which results in breakage of the springs. The S & V design is applicable to both the front and rear of the Ford car and comes in pairs or a set of four. It is moderately priced.

Automatic Gasoline Saver.

A device which is stated will save 25 per cent. of the fuel and increase the efficiency of the motor is the Automatic gasoline saver, the product of the Automatic Gasoline Saver Company, 1777 Broadway, New York City. It is utilized with the carburetion system and comprises a hollow circular metal member having an air inlet at the bottom. A metal ball seats in this opening and normally closes the aperture by the pressure of a spiral spring. The movement of the ball from its seat is regulated by the spring and by the suction of the piston of the motor. Means are provided for suitably tensioning the spring to regulate the amount of air admitted. The principle involved is that of atomizing any particles of fuel not properly vaporized by the carburetor, thus permitting less fuel to be used.



Hoyt Ammeter.

Owing to the demand for a miniature switchboard type of ammeters and voltmeters, for service with lighting and motor starting systems, motor boats, etc., the Hoyt Electrical Instrument Works, Penacook, N. H., has brought out what is known as the type 22, which is very compact, being but 2.25 inches in diameter. They are designed for service with direct current and operate on the D'Arsonval principle. Jewel bearings are incorporated and they combine all the qualities of the larger instruments for which this company is noted. The voltmeters and ammeters are constructed in four sizes, for 10, 15, 30 and 50-volt systems. The indicating hand registers both charge and discharge with the ammeter types.

Standard Battery Connector.

In wiring dry cells, either in series or multiple series, it is important that the connections be tight if maximum efficiency is to be secured from the batteries. The Fitzgerald Manufacturing Company, Torrington, Conn., is producing a new design termed the Standard battery connector, which is constructed to grip the locking nut or terminal of the cell, and it is stated that the nuts will not jar or work loose. The company also manufactures another design with which locking nuts are not necessary. It is attached by simply springing apart the terminal loops, which when released grip the post.

Red Seal Dry Battery.

In these days of magneto ignition the motorist is prone to neglect the dry cells utilized for starting or as

Digitized by Google

an auxiliary. As these members are only occasionally employed it imperative that they be of serviceable quality and not subject to deterioration. The Manhattan Electrical Supply Company, 17 Park Place, New York City, is the maker of the well-known Red Seal dry cells, which are especially designed for ignition systems in motor car, motor boat, etc. The maker states that the Red Seal cell will show a greater amperage after service than any other form and that it does not deteriorate by standing idle. It is made both in round and square cartons and each of these is produced in three sizes to meet the requirements of service. The square type is placed in a box of non-conductive material to prevent the possibility of short circuits where the cell is subject to considerable vibration.

Auto Traffic Signal.

The Fawkes Auto Company, Minneapolis, Minn., is manufacturing the Auto Traffic signal, which is designed for attachment to the front or rear of the car, or both. It comprises a form of rotating arrow, the head of which is electrically illuminated. It is operated by a small lever on the steering column connected up with a steel rod which passes under the hood and which is furnished with drop-forged universal joint connections. By it the operator of the machine is enabled to signal an approaching vehicle, also to warn those in the rear of the direction to be taken by the car upon which it is fitted. The signals are furnished in black and nickel and are supplied for any make of car.

Kantalever Emergency Spring Repairer.

It is decidedly inconvenient to be caught on the road some distance from home with a broken spring. While temporary repairs may be effected with blocks, etc., considerable care must be exercised in the operation of the car. The Motor Car Equipment Company, 55 Warren street, New York City, is marketing a practical device called the Kantalever emergency spring repairer, which, when applied properly, is stated to be able to sustain a broken spring for an indefinite period. The Kantalever may be utilized for any type of break, including that of the main leaf near the spring horn, as the device is provided with an opening through which a bolt may be inserted, practically providing a new horn. The repairer can be applied to any broken section as suitable clamping bolts, etc., accompany the device. The Kantalever is made of 50 point carbon steel and is guaranteed not to break under the strain of any car load.

Universal Blow Torch.

The Westinghouse Electric & Manufacturing Company, East Pittsburg, Penn., is marketing a new gasoline blow torch, presenting a number of interesting features which, it is claimed, adapts it to all conditions of service. The burner is constructed particularly heavy so that it will retain its heat and keep the torch burning in cold or windy weather. The drip cup is made especially deep, making it possible to start the torch easily. Another feature is the provision made for automatic cleaning, the needle at the end of the valve stem removing any deposits when the valve handle is turned. The handle of the valve is provided with fibre which does not get hot or require a long stem for cooling, as does an iron handle.

Boston Auto Clocks.

The Boston Clock Company, 16 State street, Boston, is marketing a line of high-grade automobile clocks, one of which, the model C, is shown in an accompanying illustration. One of the features of the timepiece is that it is adjustable to various angles by a ratchet and nut arrangement located at the back. The design of the clock approaches makes of speedometers, being very neat in appearance. It is an eight-day timepiece, having seven jewelled escapements, Breguet hairsprings, cut steel pinions, compensation balances, dust and water proof cases, etc. It is made in three sizes, having three, 3.5 and four-inch dials. An outside patented stem-winding and stem-setting device is listed as slightly extra.

Ridlon Adjustable Wheel Puller.

J. R. Ridlon, 550 Surf street, Chicago, is manufacturing the Ridlon adjustable gear and wheel puller. It comprises a 12-inch screw with a .75-inch standard thread upon which travels a 1.5-inch conical block. On each of the opposite sides of this block are a pair of pulling arms, retained in position by a shoulder screw. Each arm member has nine openings, through which the shoulder screw may be placed, providing nine different adjustments. The pulling arms have a hook end placed at an angle of 135 degrees to the long section of the arms, so that when the long part is at 45 degrees to the screw, the hook end will be parallel with it. This position allows the hook to bear against the gear with its entire face, insuring a firm grip.

OTHER NEW ACCESSORIES.

(Not Illustrated.)

Basline Autowline.

The Edwards Manufacturing Company, Cincinnati, O., is marketing the Basline Autowline, which differs from the conventional devices of this nature in that instead of a rope a yellow strand wire member is utilized. This steel wire is but .25 inch in diameter, and it is stated that it can pull a 4000-pound car up a 20 per cent. grade. The complete equipment weighs but five pounds and it may be coiled up compactly and placed under a seat. The Autowline may also be employed to extricate a car from deep mud or a rut by attaching it to the wheel and hub, using the latter as a capstan, the other end being secured to any stationary object at the roadside.

Boston Combination Grease Gun.

One of the advantages of the Boston combination grease gun made by the Randall-Faichney Company, Boston, is that it is adaptable for handling gasoline as well as light or heavy oils and greases. When oils and light greases are being employed, the Boston is used as an ordinary grease gun. For heavy greases, a lock nut is screwed down firmly and the T handle rotated, which movement forces the piston forward on a heavy square screw thread. The grease is forced out in ribbon form, which, it is stated, packs the gearcase, transmission, differential, etc., much better and more quickly than with ordinary guns. The Boston comes in various sizes ranging from three to 18 ounces capacities, and the equipment includes oil and grease tip and plug for closing. The finish is brass, lacquered.

B. R. Shock Absorber.

The B. R. shock absorber is marketed by the Lattig & Townsend Sales Company, 1431 Spring Garden street, Philadelphia, and it is claimed that both the compression and recoil of the car spring is compensated for. It is also stated that the absorbers require no attention or adjustment after installation. The B. R. device is of the clock spring type, the same width as the car spring, has six turns spaced .25-inch apart between convolutions, and is six inches in diameter. The absorber is placed under the top mainspring, and the top and bottom bolts are inserted through the shackle. A centre bolt is then placed between the slotted portion of the shackle and suitable clamps secured, as outlined in the illustration, to prevent shifting of the spring and to care for the rebound.

Endura Sheet Packing.

The Endura Manufacturing Company, Philadelphia, has brought out a new form of sheet packing which is made especially for service with hot or cold water connections, oil, gasoline, coal tar, etc. Endura packing is a vegetable fibre chemically treated, and having exceptional tensile strength will withstand a very heavy pressure without giving. It cuts very easily, is light in weight and is held to be as tough as rawhide. It is further claimed by the maker that the wetter it is the tougher it gets. One of the features of Endura is its light weight, making for economy, as it is sold by weight.

Essex Spring Bumpers.

The Essex Rubber Company, Inc., Trenton, N. J., is manufacturing the Essex rubber spring bumpers, which are made in two forms, round and oblong. They are designed to be attached to the top leaf of the lower half of the car spring, and to prevent undue compression of the spring when the wheels encounter obstacles. The bumpers are secured by special straps, and it is held that they are very durable, being made of a high-grade rubber. They are made in three sizes, small, medium and large, the width being 1.5, 1.75 and two inches, respectively. They are moderately priced.

Noark Enclosed Fuse.

The H. W. Johns-Manville Company, Madison avenue and 41st street, New York City, is marketing a special fuse for service with electric lighting outfits. It is termed the Noark, because there is no arc or flash in the event the fuse blows out, as the fuses are designed to do when a predetermined voltage is exceeded. This protects the lamps, etc. The Noark fuse is of the enclosed type, and in the event of its blowing, danger of fire igniting gasoline vapor is eliminated. The fuses are very compact and all working parts are gauged to a 10,000th of an inch to insure reliability of operation. They are constructed in various forms.

R. C. W. Master Vibrator.

The R. C. Wells Manufacturing Company, Fond-du-Lac, Wis., is marketing a master vibrator termed the R. C. W. It is designed for synchronizing the spark of multi-cylinder motors, and may be employed with batteries and a low-tension magneto, or both. By its use separate vibrator adjustments are eliminated and the operation of the engine is improved considerably through accurate timing of the spark. The vibrator comes in a neat mahogany case with a neat, substantial kick switch and a removable plug for locking the ignition.

Desmond Back Pressure Tire Gauge.

The Chicago-Racine Aluminum, Brass & Iron Works, 230 West Huron street, Chicago, is manufacturing the Desmond back pressure tire gauge, which is adapted for service with power and hand tire pumps. It is incorporated in the hose line between the source of supply and the tire, and the pressure in the tube may be taken instantly by pressing a small button. This indicates the amount of air by a hand on a calibrated dial.

ISSUES BALL BEARING MANUAL.

Free Booklet on Care, Repair and Maintenance of Ball Bearings by New Departure Concern.

Unlike the owner, the repairman, dealer or garage man is obliged to have an intimate knowledge of the components of the motor car, in order to advise his customer in the matter of new parts, repairs, care and maintenance. Many times some of the more inconspicuous parts are overlooked and among these are the bearings supporting rotating shafts. As is known by the mechanic, there are a number of different types of bearings utilized in the modern automobile, but all repairmen are not thoroughly familiar with the principles involved, methods of removing and replacing, cleaning and adjusting.

The New Departure Manufacturing Company, Bristol, Conn., has compiled a ball bearing manual which is distributed to the trade, and which explains the construction of the various types of ball bearings, these including the regular annular single row forms, cup and cone, double row, etc. These forms are illustrated and the components are shown separately and assembled.

A section of the book is devoted to suggestions on removing and replacing the different types of bearings, and sketches illustrate the construction of proper tools for the work. The importance of proper lubrication, a formula for making a grease, etc., and simple cleansing fluids are also described.

The adjustment of bearings is explained in detail and many valuable suggestions are given, as well as illustrated. Description and dimension data and price lists are included. The manual is well printed, substantially covered and may be obtained free of charge by writing Department C of the New Departure Manufacturing Company, Bristol, Conn.

STARRETT RATCHET WRENCH.

L. S. Starrett Company Brings Out New Wrench Set, Including a Drilling Attachment.

The L. S. Starrett Company, Athol, Mass., well known to the trade as maker of high grade tools, is introducing a wrench set which includes, in addition to the usual sockets, a ratchet wrench permitting rapid action with only a short arc swing, a valuable tool in replacing and removing nuts, bolts, etc., and where ordinary tools cannot be utilized. A feature of the set is the drilling attachment, which will take any twist drill from .125 to .5 inch. A reversible screw driver, extension, etc., are also included. The company is issuing a new catalogue of its tools, No. 20 G. T., which will be mailed free on request. It contains many valuable suggestions to the repairman and mechanic.

NEW FORD MASTER VIBRATOR.

New York Coil Company Brings Out 1914 Model Unaffected by Electric Lights.

The New York Coil Company, 338 Pearl street, New York City, with western branch at 1429 Michigan avenue, Chicago, has brought out a new master vibrator for model T Ford automobiles. The 1914 model differs from the previous design offered by this concern in that it is claimed that at low motor speeds a hot spark will be delivered to the plugs and that the use of electric lights does not affect its efficiency. It is also stated that the design of the vibrator is such that it cannot stick and that the motor will start on the first quarter-turn. The case is highly polished and the removable cover is locked by easily operated yet positive clasps. The switch provides for the use of dry cells or battery if desired. The coil retails for $10 and the company has an interesting proposition and a liberal discount for dealers.

FOGG HORN FOR FORD CARS.

Motor Specialties Company Brings Out New Signalling Device Operated by the Exhaust.

The Motor Specialties Company, Waltham, Mass., is manufacturing a special exhaust horn operated by the exhaust and designed especially for model T Ford automobiles, although it may be fitted to small cars. It is a compact, well designed signalling device, simple in construction, and being fitted between the engine and the muffler its efficiency is not affected by a leaky muffler. The signal proper is so arranged that the sound is thrown forward, not backward, insuring a volume of tone even when the motor is running at slow speeds. There are few moving parts, no opportunity for back pressure or for clogging. It can be installed without interfering with the use of the cut-out. It is guaranteed for the life of the car and the maker has an attractive proposition for the trade.

FEATURES FORD ACCESSORIES.

American Auto Supply Company Issues New Catalogue Devoted to Ford Specialties.

The American Auto Supply Company, 1741 Broadway, New York City, has completed what is said to be the largest illustrated catalogue dealing exclusively with model T Ford accessories ever published. It includes many new specialties designed especially for the car mentioned and comprises a large number of pages. Low prices and standard quality of merchandise are emphasized by the company, which offers special inducements to the trade. A postal addressed to the American Auto Supply Company, 1741 Broadway, New York City, will insure any dealer, repairman and garage a free copy of the book.

ADDITIONAL PROPOSED NEW GARAGES.

(Continued from Page 19.)

George E. King, Atchison, Kan., has awarded the contract for a one-story garage 78 by 150 feet to cost $12,000.

James Taylor, Philadelphia, has plans for a garage 68 by 105 feet, at 62nd and Osage streets, to cost about $10,000.

E. J. Kreitsburg, Philadelphia, is estimating on plans for a two-story stone residence and garage for Fred Necker at Drexel Hill, Penn.

John C. Norton, Bryn Mawr, Penn., is preparing plans for a two-story garage for George Chichester at Ardmore, Penn., to cost about $5000.

J. Richard Jackson, Philadelphia, is estimating on plans for a two-story brick addition, 55 by 100 feet, for the Sweeten Automobile Company.

The St. Paul Building Company, 460 Rice street, St. Paul, Minn., has the contract for a $15,000 garage at Seventh and Cedar streets, for Joseph Levi.

Peter Reinberg, 7 South Dearborn street, Chicago, will erect a private garage in the near future.

Aller Bros., 1414 South Halsted street, Chicago, is planning to erect a one-story garage.

The Jacob Hoffman Brewing Company, 211 East 55th street, New York City, has plans for alterations to its garage and brewery to cost $22,000.

M. Morster & Co., Philadelphia, will erect a garage in the rear of 2011 North Fifth street for H. H. Christ, to cost $250.

George F. Pelham, 30 East 42nd street, New York City, has about completed plans for a four-story garage.

Fred Putnam Platt, 1123 Broadway, New York City, is preparing plans for a one-story garage.

William H. Eddleman & Sons, Philadelphia, is estimating on plans for a garage to be erected at Balo, Penn., for Charles Lawser.

Richard Martin, 2458 Bedford avenue, Brooklyn, N. Y., has plans for a one-story garage, 20 by 85 feet, to cost $2000.

John Schrodt, of Schrodt & Merges, Hudson avenue, below Green street, Albany, N. Y., will erect a one-story garage, 69 by 90 feet, to cost $6000.

Nathan Harris, 79 North avenue, Rochester, N. Y., is to build a one-story garage, 24 by 80 feet, which will cost $5000.

Charles Cline, the Winstead, Rochester, N. Y., will erect a one-story garage, 20 by 24 feet.

Howard Chadwick, 141 Parkwood boulevard, Schenectady, N. Y., will soon start work on a one-story garage, 42 by 60 feet, to cost $4000.

Boyd & Berry, 11 Grampian way, Dorchester, Mass., has started plans for a one-story garage, 65 by 150 feet, to cost $10,000, to be built at Ashmont, Mass.

J. A. Miller, Wilkinsburg, Penn., is planning to build a one-story garage to cost $4000.

W. E. Cronenweth, 923 Wood street, Wilkinsburg, Penn., will erect four one-story garages to cost $400 each.

The Roland Park Company, 408 Roland avenue, Baltimore, Md., is planning to build a garage.

George A. Boyd, Philadelphia, is estimating on plans for a two-story brick garage to be erected at Broad and Kerbaugh streets for George Laskey.

The George H. Martin Company, 1421 Second avenue, Baltimore, Md., is contemplating the erection of a two-story garage to cost about $25,000.

Patrick Murnan, 9 South High street, Columbus, O., will remodel a factory into a two-story garage at a cost of $5000.

C. A. Thompson, Springfield, Ky., is erecting a garage on East Main street.

H. N. Longfellow, Trenton, Mo., has completed plans for a garage and apartment building to cost $20,000.

J. J. Jones, 118 North Topeka avenue, Wichita, Kan., has preliminary plans for an eight-story automobile exchange, 100 by 100 feet.

Klentop & Huffel, Alliance, Neb., is planning to build a one-story garage, 50 by 140 feet, to cost $9000.

Gascoigne & Goddard, 201 Devonshire street, Boston, Mass., has the contract for a one-story garage, 47 by 120 feet, for Charles B. Lewis, Wellesley Hills, Mass.

August A. Winckhofer, 263 South Eighth street, Newark, N. J., has awarded the contract for a one-story garage, 50 by 100 feet, to cost $9000, at East Orange, N. J.

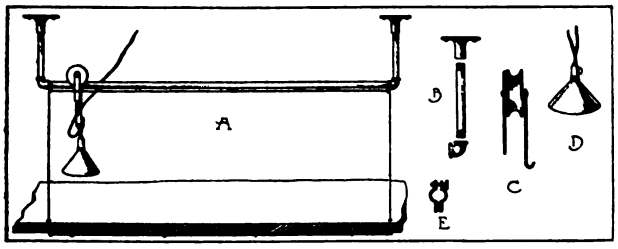
Digitized by Google

MECHANICAL NOTES FOR GARAGEMEN.

ONE of the chief requisites of the repair shop is a well-lighted work bench. The majority of installations provide a drop light, and if the bench is very long, two or more of the lamps may be fitted. The disadvantage of a fixed light is that the workman is often obliged to move the work under the lamp, and when he wishes a tool at the other end of the bench must swing the light in the direction of the object sought.

In an accompanying illustration is shown a method of constructing a light rack over the bench, the sketch at A depicting the operation of the light, and it will readily be seen that it is possible for the workman to be at the extreme right of the bench and roll the lamp to him by means of the cable located under the bench, as shown in the drawing. Some benches would not be adaptable to its use.

The rack is easily constructed and the material required is not expensive. It consists of small gas piping, two standards and a like number of elbows. This material could be replaced by round iron, drilling and threading the parts to fit plates which are secured to the ceiling or to



Working Plan of Adjustable Light for Work Bench: A, Showing How Light May Be Moved as Desired; B, Supporting Arm; C, Pulley; D, Lamp; E, Cable Carrier.

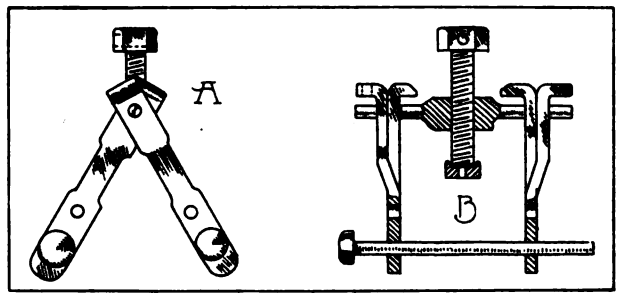
the wall, according to the location of the work bench.

A supporting arm is shown at B, while the pulley member is illustrated at C. The latter is provided with a hook for attaching the lamp cord and has an extension on the opposite side to retain the pulley on the rod. It is not necessary to fit the cable carrier shown at E, as the light could be moved by hand as desired. The cable was fitted in the installation noted by the writer, and the inventor of the plan states that it was extremely handy when he wished the use of the lamp at the other end of the bench. In addition to making for convenience, the device makes for economy, as one light may be utilized in place of two or more.

INGENIOUS GEAR PULLER.

Many times it is difficult to draw timing gears, etc., from their shafts owing to the lack of a suitable tool. Sometimes the wheel is lightly constructed with delicate spokes and to attempt to draw the gear with the ordinary tool usually results in buckling or throwing it out of alignment.

In an accompanying illustration is shown a gear puller, the maker of which was awarded first prize in the mechanics' competition conducted by



An Ingenious Gear Puller: A, Showing Construction of Device; B, How Four Points of Contact Are Obtained.

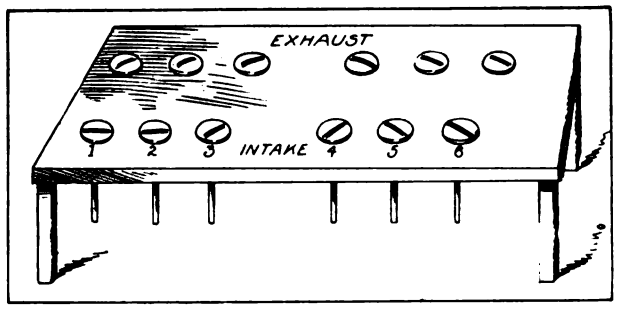
Commercial Motor, an English motoring print. It is stated by the maker that it will remove a gear without injuring it, as an even pull is obtained at four separate points of the rim when required. This is accomplished by inserting two three-quarter pins through the arms of the top, on which the wheel can be placed.

When the gears are solid and will withstand more strain, the other end of the dog, with the bent-over legs is utilized in the usual manner. When the gear has openings the reversible dog may be used as well. One of the features of the device is that it may be taken apart and stored easily.

VALVE RACK.

The complete, and sometimes the partial, overhaul of the power plant includes the removal of the valves, and when these members must be laid aside for any length of time, they are apt to become mixed if the work is intrusted to a green helper. The usual practise is to leave them in the cylinders, but this has its disadvantages in that care must be exercised in handling the units.

In an accompanying illustration is presented a suggestion for a valve rack which can be constructed of wood and may be made a permanent fixture on the work bench or a portable unit as desired. All that is required is to drill 12 holes to take the valve stems and the openings are



Suggestion for a Valve Rack to Simplify the Work of Replacement in the Overhaul of the Motor.

marked from 1 to 6. For T head motors the upper row of holes could be utilized for the exhaust valves and the lower for the intakes.

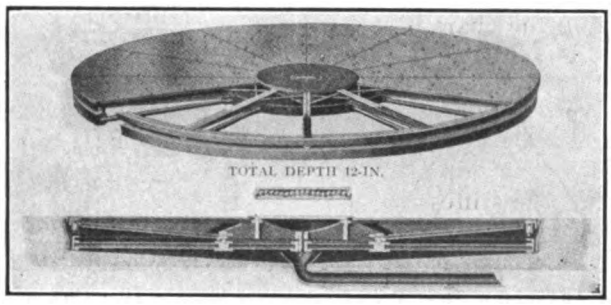
GARAGE AND REPAIR SHOP EQUIPMENT.

THE advantages of turntables in the garage are numerous. Not only do they permit of utilizing all the floor space, but they make for



Universal Turntable, Having Ball Bearings and Means for Draining, Is Constructed in Varying Capacities.

safety, in that accidents due to placing the machine in its proper space on a crowded floor are avoided. This is particularly true where the garage is a converted building and of such dimensions as to compel the driver to make many changes of gears in positioning his car. Considerable time is saved through the installation of a turntable not only in entering and leaving the building, but the washer is able to handle the machine without starting up the motor.

The Canton Foundry & Machine Company, Canton, O., manufactures a wide variety of turntables adapted to both public and private service and in various sizes and capacities. One of the features of the Universal design, shown in an accompanying illustration, is the inexpensive foundation required and the means employed to take care of the accumulation of mud, etc., removed from the vehicle in the washing process. The pit is but 12 inches deep, a concrete base, slightly larger than the turntable, and grooved so as to carry all water and debris from the centre to the periphery of the table and into a concrete gutter or drain, which is covered with removable plates.

It is held that the Universal operates so easily that it may be turned by a child. This is due to the Serpentine, patented, ball bearing race course, so constructed that foreign elements are prevented from interfering with the movement of the balls. By referring to the lower view in the illustration it will be noted that the top of the table rests on seven balls at the summits, the remaining balls revolving in pockets filled with lubricant. As the table moves the balls at the "high spots" roll and are replaced by others coming up, eliminating friction.

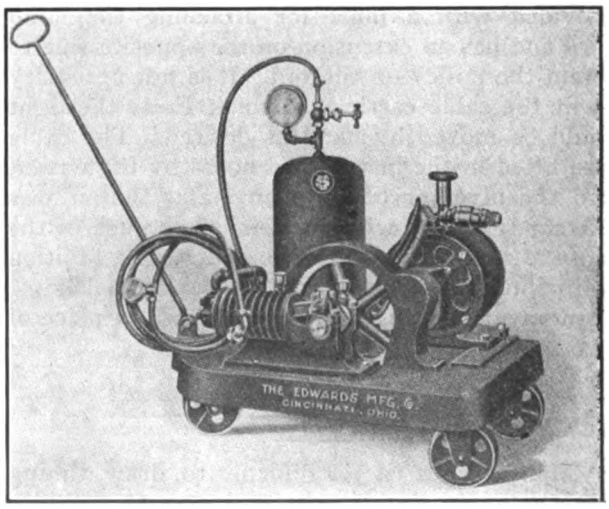
The superstructure is of structural steel built in truss form and reinforced. The top plates are No. 7 gauge steel, securely braced. The table has a checkered iron removable centre with No. 7 gauge steel plates extending to the outer rim, neatly fitted and sloping slightly to provide for proper drainage. The 12 top steel plates are removable and are reinforced by angle irons at proper intervals, firmly riveted crosswise underneath and resting on structural trusses. The table canot tilt, as the slightest depression throws caster wheels on the outer rim to the rim track.

The Universal is made in 12, 14, 15 and 16-feet table diameters, each having a supporting capacity of 8000 pounds, and 16 and 18-foot diameter tables with capacities ranging from eight to 10 tons for truck service. The company makes a specialty of installations and will submit data and specifications on request. The product of the concern is described and illustrated in a catalogue which is mailed free.

EDWARDS PORTABLE TIRE PUMP.

The Edwards Manufacturing Company, Cincinnati, O., is producing the Edwards portable electric tire pump shown herewith. It is designed both for public and private garages, is simple in design, and throughout the best of material and workmanship are employed. The motor, compressor and tank are mounted on a neat base having three wheels and a convenient handle. The air tank is 12 inches long and six in diameter, and is equipped with a petcock at the bottom, permitting of blowing out any condensation that may exist, also for pumping into the tank direct.

The motor is a .5 horsepower unit, constructed for either alternating or direct current, 110 or 220 volts, 60-cycle, single-phase. The compressor is of the air-cooled type, geared to the electrical unit, with pinions fully enclosed. Eight feet of high grade .5-inch hose with gauge, tank pressure gauge and 20 feet of electric cord and socket are included in the equipment. The switch is located on the motor. Lubrication is provided by means of grease cups on the cylinder and crankshaft bearings. It is stated that the outfit will pump a 34 by four-inch tire from flat to 70 pounds in 90 seconds. The weight of the equipment is



Edwards Portable Electric Tire Pump, a Simple and Compact Outfit.

130 pounds. The company issues a catalogue on portable tire power pumps, grinders, drills, etc., which will be forwarded on request.

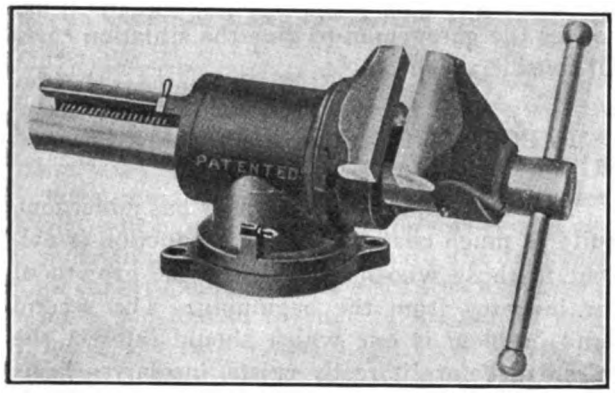
F. & R. PATENT VISE.

The Fulton Machine & Vise Company, Lowville, N. Y., is manufacturing the F. & R. patent vise in the machinist's pattern. It has the advantage of two complete swivels, a combination of the two giving the most desirable positions for the use of a mechanic. The vise, which is presented in an accompanying illustration, is locked at any angle by two separate methods. One is by clamping the work within the jaws, which tightens the frictions, the other by the use of the position pins. With both in use it is stated that the vise is positively locked in any position. The jaws are always held in place, when the work is removed, by the position pins, if the operator requires, by the use of which the vise is made stationary at any angle. Cast steel faced tempered jaws are utilized. The vise is made with openings varying from two to nine inches and in six sizes, the weights varying from 6.5 to 155 pounds.



F. & R. Patent Vise Especially Adapted for Motor Car Repair Work.

WINSOR VALVE REMOVER.

A New Design Adaptable to Any Motor, Moderately Priced and Well Constructed.

The varying design of motors compels the repairman and dealer to carry in stock a number of valve lifters to meet the requirements of different valve construction. A new tool of this nature, which presents interesting as well as practical features, is the Winsor, shown in an accompanying illustration, and made by the Winsor Manufacturing Company, 55 Eddy street, Providence, R. I.

It differs considerably from the conventional valve lifter in that the operator can swing the lever after the valve spring has been compressed, enabling him to change his position as well as to reach the pin or key locking the spring. This is accomplished without any slipping as the tool is positive in its action.

As will be seen by the illustration the tool consists of a barrel A, levers B and C, and a chain. The barrel is one of its interesting features. It is threaded to fit the spark plug opening of the valve cap into which it can be fitted with the fingers. Through the barrel extends a spindle, which is also threaded, and which is employed to hold the valve on its seat, it being screwed down easily by the fingers. Both the levers B and C have adjustable positions; that is, the chain may be attached to provide for different thickness of the cylinders, exhaust and intake manifolds, etc., and varying lengths of valve springs are compressed by lengthening or shortening the chain as required.

The barrel member B rotates freely on the part inserted into the valve cap and being threaded into the last named member prevents slipping. It will be noted that the lever C is sufficiently long to provide the necessary leverage to compress the stiffest valve spring and with but little exertion.

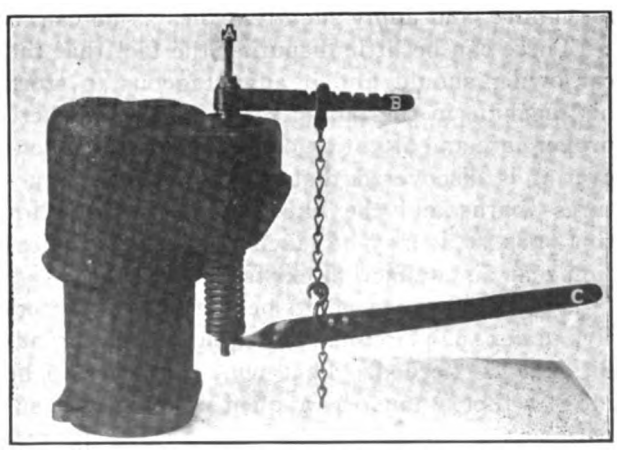
The Winsor valve lifter is constructed of the best of material and its dimensions are such as to insure long life. Extra barrels are constructed to fit different sized spark plug openings, and the tool comes finished in black enamel and nickel plate. Liberal discounts are offered to the trade.

NEVER LOOSEN LOCK NUT.

L. L. Swenson, Ottuma, Ia., has invented a lock nut device, termed the Never Loosen, which comprises a split nut having threads for engagement with the bolt threads and adapted for binding engagement on the face of the nut proper, preventing turning of the nut. The locking action is secured by the twisting of the locking nut before the threads are cut. The nut proper is constructed of hardened tempered steel so that when applied to the bolt it will have a tendency to resume its normal shape, thereby locking both the nut and the bolt.

VULCAN CHAIN PIPE VISE.

J. H. Williams & Co., 150 Hamilton avenue, Brooklyn, N. Y., is manufacturing the Vulcan chain pipe vise, which is constructed of bright steel throughout and is claimed to be unbreakable. It is also compact in design and may be set up readily for service. It has drop forged steel jaws, tempered for file sharpening. The vise is made in three sizes with pipe capacities of from .125 to eight inches.



Winsor Adjustable Valve Lifter Which Has Positive Action and Which Can Be Rotated with Valve Spring Compressed.

Advertising Copy for the ACCESSORY AND GARAGE JOURNAL requiring submission of proof must be received by 5th of month to insure publication in issue of the 15th of month.

Advertising Copy, proof not required, accepted to morning of the day before publishing day (unless such day is Sunday or holiday, when previous day is limit) of each publication.

Entered as second class matter Dec. 30, 1911, at the postoffice at Pawtucket, R. I., under the Act of March 3, 1879.

SYSTEM AND ITS APPLICATION.

Conditions often arise over which the garage or service station proprietor has no control, but which result in dissatisfaction on the part of the car owner. However, it should be the aim of any business man to discover, if possible, the reason for failure, and apply such remedies as he can.

There can be little disputing the fact that the car owner should find it advantageous to store his machine in the public service station, where proper care and attention can be assured. Whenever it is discovered that several outside structures—barns and the like—are being hired for this purpose, it may be taken as sufficient indication that dissatisfaction exists.

System is conceded to be the proper corrective under such circumstances, but something additional is needed. That which appears to be ideal in theory must be applied under proper supervision in order to produce the results desired. Therefore, the first step is to adopt a system which best meets the needs of the business, and the next is to know absolutely that its every provision is rigidly supervised and enforced.

It is only logical to assume that the concern which makes it a business to look after many cars can give the required care and attention much more reasonably than this can be accomplished by the individual. If the car owner is not convinced of this, it must be due to the character of treatment which he has been receiving, and it behooves the garageman to give the situation careful consideration.

IMPORTANCE OF SALESMANSHIP.

That the selling of automobiles has undergone quite as much change as their production is evident to those who have watched the growth of the industry from the beginning. The second hand problem is one which should interest the salesman before it really exists, insofar as he is concerned. That it is possible of solution in this manner cannot be denied.

Manufacturers have been concerned with the advisability of announcing new models and have reached no definite agreement upon the subject, largely because there has been a noticeable decrease in the number of owners who seek to "trade in" their cars at the end of the season. Perhaps this can be held to apply more largely to the owners of the higher priced machines, since it is noted that many of these no longer keep such cars in constant service, relying upon machines of lower price for ordinary, every day work.

It follows that the man who is engaged in the disposal of automobiles must study his market more closely than ever before. There is still plenty of opportunity to secure new business, and while it may take rather more energy to make a sale, there is something to be gained in the realization that when the sale is made there is no necessity for doing the work all over again in order to dispose of the second hand machine taken in trade. It is a situation in which salesmanship is of the utmost importance.

WATCH THE LEGISLATURE.

Garagemen and dealers would do well to give greater consideration to those who seek for their support as candidates for the state legislature. It would appear that there was a concerted movement among legislators to consider anyone connected with the automobile industry as legitimate prey from whom they may expect new revenue whenever additional funds are required.

Garagemen and dealers cannot help but have an interest in those restrictions which apply directly to their business, and they should have concern for any proposition which means an additional tax upon the resources of those with whom they seek to do business. The time to begin activity is during the season in which men run for office.

SERVICE STATION SYSTEM OF MERIT.

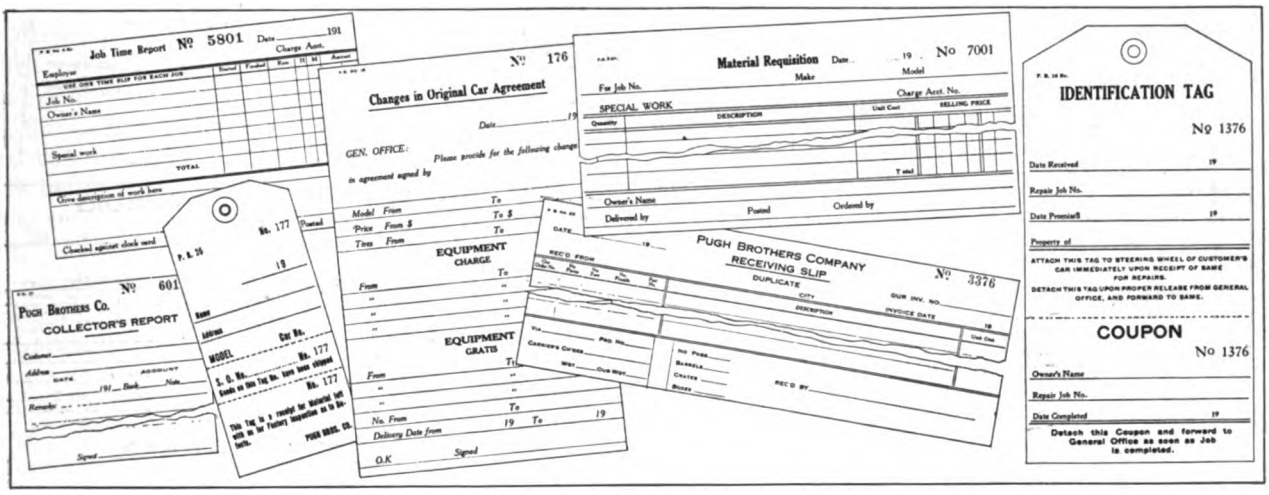
A Plan Devised to Absolutely Control Every Detail of the Business Through the General Ledger---How the Various Forms Act as a Cross Checking Scheme.

IN THESE days of service to the automobile owner, as best understood by the word, the progressive concern seeks new features that will increase the efficiency of that department. The object must be to render the character of service that will be satisfactory to the owner and at the same time absolutely safeguard the interests of all concerned, preventing slackness with resultant leaks and loss of revenue to the garage and assuring the patron that he pays for exactly what he receives—no more and no less.

There is, of course, such a thing as having too much system. That selected should be so simple of comprehension that it will run itself. It should never be a load for a concern to carry, but it should carry the concern. Three things to overcome are carelessness, temptation and laziness. Two results for which all are striving are more trade and larger profits. To secure these one must have a suitable system, providing for information, protection, accuracy, courtesy and confidence, as five of the cardinal principles necessary for success in conducting an automobile business.

A system designed to provide these results is that utilized by the Pugh Bros. Company, 53 Mathewson street, Providence, R. I., one of the largest distributors in the East. This concern handles such standard makes of cars as the Overland, Marion, American and Palmer-Singer, and Willys Utility and Federal trucks. When it is considered that a full service is given the owners of these vehicles, it can readily be seen that an organization of some magnitude must be maintained. The company began on a small scale in 1904 and so satisfactory has been its growth that its plant was recently enlarged by an additional 30,000 square feet and probably will again be increased in the near future. The most modern automatic machinery and a corps of expert mechanics insure that patrons shall receive service of the highest standard in every respect.

The present high grade system, which has been commended as one of the most complete that has been inspected by experts in this line, was devised by I. D. Billings, accountant, of Providence, who placed it in operation several months ago. The main idea is to absolutely control every detail of the business through a general ledger, from which the balance sheet is taken. The cost of sales is based upon the invoice price of cars and equipment therewith; that of parts and repair sales on the percentage of material and labor, such percentage to be adjusted at the end of each fiscal year, a physical inventory forming the basis of this adjustment for material and the total payroll, for labor.



Some of the Blanks Utilized in the System Devised by I. D. Billings, Accountant, Providence, R. I., for Pugh Bros. Company of That City.

In an article of this nature it would, of course, be impossible to explain in minute detail the complete workings of this system, the endeavor being to bring out in a general way the principal methods of procedure in its operation. A complete control of the stores is maintained through distribution of purchases and the withdrawing of all materials for all purposes on material requisition.

No material or supplies are delivered by the stock keeper except on a numbered requisition blank (No. 7001 illustrated herewith) properly signed by the foreman of the department in which the work is to be performed, and the stock clerk will not honor such blank from which the job number or class is omitted. To do so might cause confusion, inasmuch as the blank could not be used to check against other blanks received in the office during the course of business. Each morning the stock keeper forwards all stock requisitions of the day previous to the main office, together with statements of credit given to such departments as returned material obtained

Digitized by Google

on requisition and found not needed. For the return of such stock a credit blank (No. 54), similar to the requisition sheet, is issued to the department returning such stock, and this is likewise returned to the main office by the various departments, thus serving to keep correct all records, inasmuch as they form a cross reference at the office.

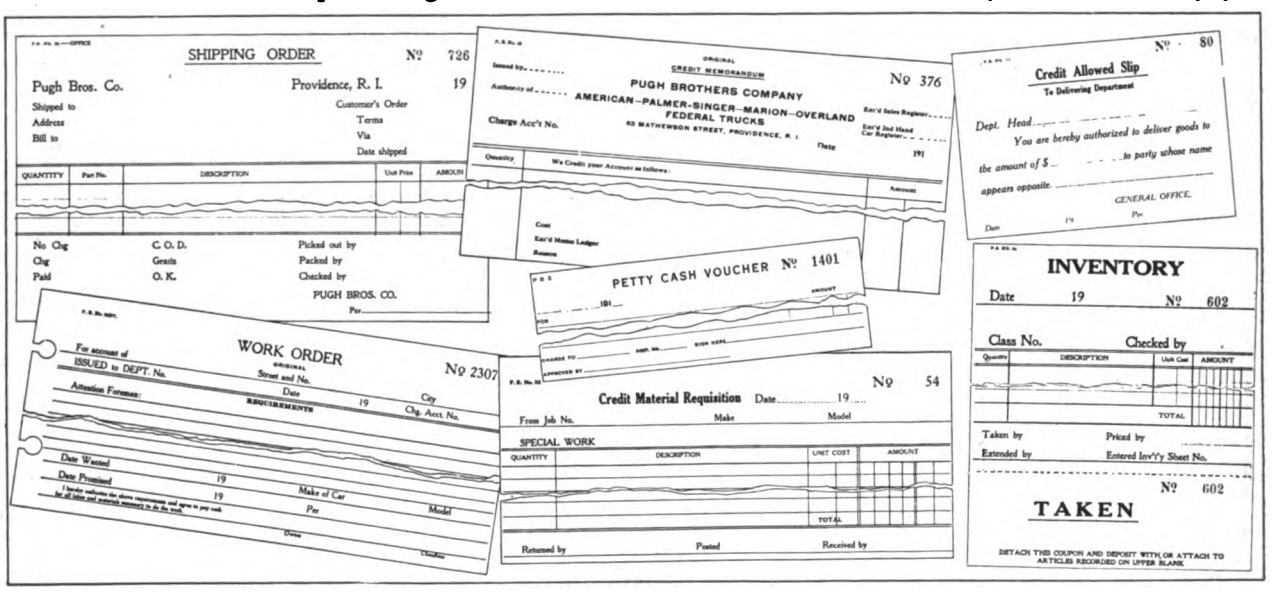
A time report blank (No. 5801) is furnished for all employees, one slip being used for each job worked upon. This slip is adapted to all departments and contains spaces for the job number, owner's name, special work and a description of same. The time work was started and finished is recorded and can easily be totalled when the job is completed.

These time reports are kept for a day and each employee turns them in at the general office on the following morning. The office force extends the time elapsed, supplies the rates, inserts the relative values chargeable to each job, checks the total time reported against the employee's time card and then posts the items with proper equity to the cost summaries. Thus it will be seen that a continuous accumulative record of all costs is maintained at the general office and is ever ready to be summed up at the required time with very little labor, since the record is at all times up-to-date. In addition to this advantage, each job record is kept separately in a numbered job envelope so that it can be referred to instantly in case of question. With the other records of cost, etc., there is constantly a cross reference, which prevents the possibility of mistake.

When a car is brought in for any repair, a work order is made out and forwarded to the department in which the work is to be done. The foreman of the department attaches to the automobile or part to be repaired an identification tag (No. 1376), which is made up in two parts, the lower to be separated at the conclusion of the job and forwarded to the general office. Each part is numbered identically, so that as soon as the detached coupon is received at the office, together with the time reports, material requisition, etc., the bill to the customer is made up and is ready for presentation without delay upon his call for the job.

No repair work of any nature is performed without the necessary work order (No. 2307) from the general office concerning such work. This order gives the necessary instructions for the job, with the date wanted, date promised and other necessary data, and at the bottom is a space to be signed by the owner of the car or his chauffeur, authorizing the work and agreeing to pay for same. This order is filled out in triplicate, the original being yellow, the second copy, white, and the third, blue. The original is forwarded to the foreman of the department and retained by him. The duplicate is filed in the office in numerical order, while the triplicate is filed in the office in alphabetical order, thus providing for an effective cross reference in case any item should be questioned by a patron.

These blanks are always used for every job.



Additional Blanks Forming a Portion of the Pugh Bros. Company's System for Conducting a Service Station.

Whenever work is performed in an emergency before or after regular hours, Sundays and holidays, it is done as usual, but on the opening of the office the latter is notified and supplies the necessary order, which is treated in the regular manner. When the coupon from the corresponding identification tag has reached the general office the final material requisitions and time slips relative to the job are secured from the workroom and posted to the duplicate copy of the corresponding work order, in the space provided on the reverse side. The coupon being the signal that the job is finished, allows the immediate billing of the job, ready for the customer.

For the reason the work order number becomes the job number for the proper indexing of the material and labor reports incident thereto, it is insisted that a work order be secured before any job is started. The arrangement provides the advantages of an alphabetical and numerical control by the office of all repair work in process; an automatic supplying of job numbers to all repair jobs; the relieving of the foreman of much cleri-

Digitized by Google

cal detail ordinarily carried in his mind, and the automatic signal to the office of all completed repair jobs.

When the customer has paid his bill a coupon representing such settlement is presented to the patron, who must deliver the same to the foreman, such coupon being the authority to the department to release the car or part upon which work has been done. The foreman then detaches the identification tag from the work before it leaves the shop and both tag and coupon are forwarded to the office. All these various records are carefully preserved and filed in a job envelope as a complete record of that job.

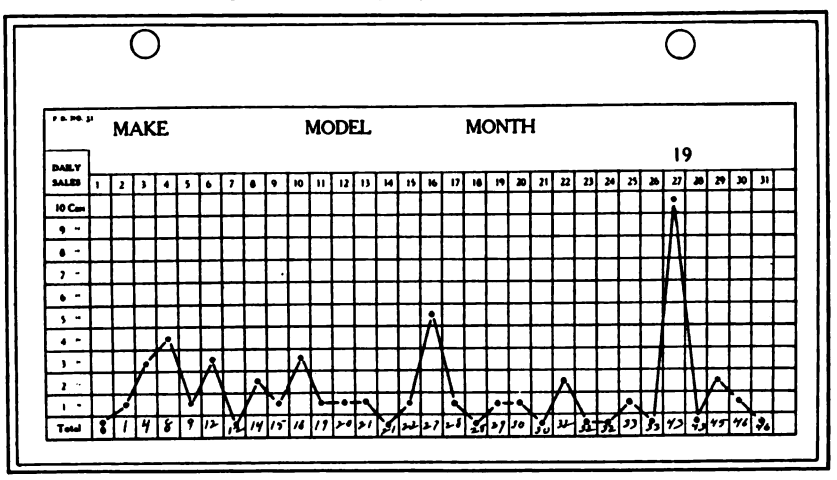
It will be seen that absolute control of all work is maintained by the office, which is always in a position to give information upon request without the necessity of wasting time in visiting the numerous departments to ascertain the status of a particular job about which an inquiry may be made. The time of employees is kept, the dispensation of material is known, and the several forms and tags supply cross references that make it impossible for a mistake to occur or that dishonesty shall creep in.

Oftentimes a regular customer wishes supplies in haste and desires credit. In this event a form (No. 80) is used which is intended to establish the control of all goods being sold to customers on credit, entirely within the general office. These forms are printed and numbered in numerical sequence in padded blocks of 25, which are distributed at convenient points in the building for availability. When a customer desires material on credit he is supplied from the nearest point of location with a credit slip, which he presents at the general office for authority to so purchase.

The general office passes upon the customer's rating and fills in the form authorizing the head of the proper department to deliver goods to the customer. The latter presents it to the foreman and receives the goods. A charge sales slip is made out and when it is forwarded to the office the credit allowed slip accompanies it. There are two mains points to this procedure, namely, authorizing of credit based upon the condition of the customer's book account, and insuring the proper initials and the name of the customer being set forth upon the charge sales slip.

Collectors' reports (No. 601) are turned in at the office every day and records made of the returns. In the matter of a salesman signing a contract with a patron for the purchase of a car, it often happens that the purchaser changes his mind relative to some features of his car. To save the annoyance of making out an entirely new contract, a numbered blank (No. 176) provides for the necessary changes in the agreement, as to model, price, or tires and equipment. Space is provided for equipment the company may see fit to furnish gratis and this sheet is attached to the original agreement, thus giving a complete history of the sale.

For the matter of control of shipments, both outgoing and incoming, the system provides completely. When a customer brings in a broken part, which requires its shipment to the factory either for repair or replacement, a small yellow tag (No. 177) is filled out with the name, address, model and car number thereon, this being attached to the part. This tag is numbered at the top. When the part is turned in a coupon at the bottom of the tag is detached and presented to the customer as a receipt for the material left with the firm for factory inspection. This coupon bears the same number as the tag attached to the part. A feature of this tag is a third reference, provided by another small coupon which is detached at the office when the part is shipped. This is filled in with the shipping order number, and since the coupon is numbered identically with the customer's receipt and tag shipped with the part, an inquiry shows that the part has been



Pugh Bros. Company's Sales Report Form, Showing Fluctuation in Daily Sales for the Month.

shipped, the small coupon being filed in the office numerically.

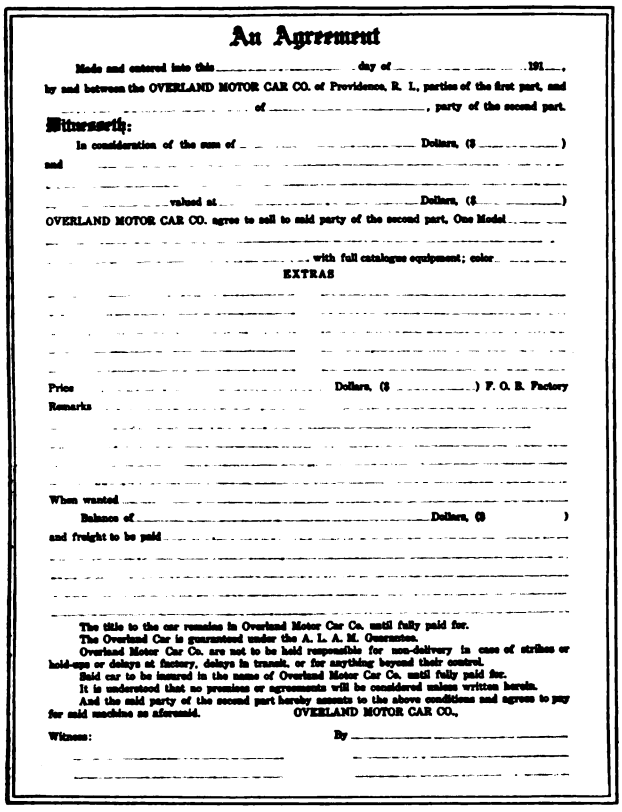
All shipments made by the company, whether to customers or of parts, etc., to the makers, are accounted for by a shipping order (No. 726), which contains a description of the goods, quantity, value, date and other necessary information. This and the receiving slip (No. 3376), which provides for similar notation in case of shipments received, are made in duplicate and filed in their proper places. It will be noted that the shipping order provides for three signatures, thus insuring a triple check upon each lot of goods which leaves the concern.

The credit memorandum (No. 376) provides for a record of all items for which patrons of the company should receive credit for goods returned, overcharges, etc. This is made out in duplicate, one copy going to the party to whom credit is due, while the other remains on file in the office. Sometimes it is found convenient to utilize this blank in what is termed inside work, when, instead of making a regular journal credit entry, the original is filed with the account in question

Digitized by Google

to explain any overcharge or other necessity for crediting that account which may exist.

The sales department is governed by a system of forms which are made out by the salesmen, setting forth prospects visited, sales made, commissions due and all data relative to their work. A special form is kept at the office for the recording of daily sales of the month. This form is numbered vertically with the number of days in the month, while horizontally, beginning at the bottom and extending to the top, are numbers up to 10, which ordinarily serves to care for the number of sales made in any one day. As the form is ruled, each number has a row of squares running up and down the sheet. The number of sales on a given date is recorded by a dot in the corresponding square and at the end of the month a continuous line is drawn from one dot to



An Agreement

Made and entered into this ..... day of ..... 191..., by and between the OVERLAND MOTOR CAR CO. of Providence, R. I., parties of the first part, and ..... of ....., party of the second part.

Form of Contract Utilized by Pugh Bros. Company.

the next in order, until the whole sheet has been traversed. This line will show the fluctuating sales of the entire month at a glance.

In the ordinary course of business express charges, expenses for supplies used, etc., are paid as they occur. To account for these disbursements, a petty cash voucher (No. 1401) is used which is numbered and filed. These vouchers serve to account for all moneys expended and are the amounts apportioned to the proper accounts.

A system of inventory has been devised which is very effective and the possibility of mistake is slight. Previous to the taking of inventory tags (No. 602) are attached to every piece of stock and property in the entire building. When those designated for this task fill in the spaces on the part marked "Inventory," with the required information, that section is detached from a similarly numbered coupon at the bottom, upon which is printed the word "Taken". This indicates that the other portion of the card has been filled in and detached. At the conclusion of the inventory a responsible party inspects the whole building to see that no articles have been overlooked. This is quickly revealed by any tags which may not have been detached. It is impossible to take an item twice, because should an individual neglect to detach and deposit the tag, it would be discovered in the general office and adjusted. The tags are numbered in sequence and a record of those distributed is kept. Failure to return one would at once be detected.

In fact, there is no weak spot in the system that is discernible and several features of it have been adopted by other interested concerns. Every possible contingency appears to be provided for and the several departments are thoroughly safeguarded, both against error and imposition, since all responsibility is assumed at the general office. The various records maintained, singly and in duplicate and triplicate, serve as effective cross references, so that the likelihood of dishonesty or other adverse factor entering into the business is decidedly remote.

The sizes of the various forms illustrated are as follows, the width and height being given in that order and in inches:

Material requisition	6 x 3
Credit material requisition	8 x 5
Job time report	6 x 4½
Identification tag	4 x 8
Work order	8½ x 5
Credit slip	5 x 3¼
Collector's report	4 x 6
Changes in agreement	5 x 8
Yellow shipping tag	2⅜ x 4¾
Shipping order	8½ x 9
Receiving slip	9 x 5½
Credit memorandum	8½ x 7
Petty cash voucher	6 x 3
Inventory tag	5 x 8
Agreement	8½ x 11
Sales report	9½ x 5½

PARTS FOR GROUT CARS.

Having purchased the entire automobile stock of the Grout Automobile Company, Orange, Mass., at the recent receiver's sale, A. F. Kirkpatrick, formerly sales manager of that concern, announces that he is prepared to furnish parts for Grout cars. All goods will be shipped C. O. D. In addition Mr. Kirkpatrick will conduct a general repair business in one of the buildings formerly occupied by the company. The main buildings of the company were sold to the Orange National Bank for $19,010 plus mortgage and interest of $3000. It is understood that they are to be occupied by a new concern—not a motor car company.

CUTTING SALE UNCONFIRMED.

The Security Trust Company, receiver for the Cutting Motor Car Company, Jackson, Mich., announces that the court has declined to confirm the sale of the assets of the company, held Aug. 19. In addition, it states that an involuntary petition in bankruptcy recently was filed against the company, and that the company has demanded a jury trial, although no date has as yet been set for the hearing. In the meantime, the receiver is continuing the operation of the service department.

INTERESTING TRADE CATALOGUE.

The Motor Car Supply Company of Chicago has compiled a new catalogue which is sent free to the trade only, the company conducting a wholesale business. The book contains descriptions, illustrations and prices of automobiles, motorcycle and bicycle supplies, and one section is devoted to machinist's tools and supplies. The company guarantees prompt service and makes special inducements to the trade with which it deals direct. A postal addressed to the Motor Car Supply Company, 1451-1455 Michigan avenue, will receive prompt attention.

TRADE INFORMATION EXCHANGE BUSINESS PROPOSITIONS.

Opportunities Are Offered Below for Agents to Secure New Lines, for Manufacturers to Extend Their Representation, and for Producers to Get in Touch with Those Who Are in the Market for Equipment and Supplies. All Are Opportunities for Live Men and Firms Seeking Profitable Relations.

The Following Details of Trade Opportunities Presented by Members of the Trade Information Exchange Are Published Without Names, These Interested Desiring the Negotiations to Be Strictly Confidential. Replies Should Be Addressed by the Number Given and Sent to the Exchange with Postage for Forwarding.

Through the Trade Information Exchange, The Accessory and Garage Journal is in a position to supply at request a number of the best pleasure car and power wagon agency propositions that can be secured. These agency openings are for machines of all kinds, makes and prices. When writing, state preference, prices and full details concerning that which is desired. All correspondence will be treated as confidential. No charge will be made for the service rendered.

CAR AGENCIES WANTED.

8250—Iowa Concern is interested in securing the agency for some small light six-cylinder pleasure car, a very light four, and a cyclecar, the price range to be from $350 to $1700.

9204—Nebraska Dealer would accept agency for pleasure cars selling from $450 to $750.

8542—Ohio Company is interested in securing the agency for pleasure cars selling at $950 to $2250 and commercial vehicles from $1250 to $1500.

8636—Tennessee Firm, now handling the agency for two lines of pleasure cars, expects to be in the market shortly for still another line.

9275—Indiana House, engaged in the distribution of pleasure cars and accessories, desires the agency for commercial vehicles selling from $950 up.

8523—Kentucky Concern would accept the agency for pleasure cars selling at between $750 and $1000.

8627—Rhode Island Company, with well established accessory business, is interested in securing the agency for motor trucks rated at from 1500 pounds to 2.5 tons.

8729—Tennessee Concern, engaged in the manufacture of carriages and wagons, and motor truck bodies, would take the agency for pleasure cars selling at $1000 to $2500, and commercial vehicles ranging in price from $900 to $3500.

9253—House in District of Columbia, recently incorporated to operate a general garage, is interested in the agency for pleasure cars selling from $400 to $1000, and trucks from $1000 to $2000.

8531—Rhode Island Garage desires agency for pleasure cars selling between $900 to $2500, and for motor business wagons rated at from one to 1.5 tons.

8621—Ohio Concern, handling three lines of pleasure cars, desires agency for power wagons selling at $500 to $1250.

8672—Massachusetts Firm, well established, but not heretofore dealing in cars, would accept the agency for pleasure cars selling from $500 to $6000 and business wagons from $500 to $5000.

ACCESSORY AGENCIES WANTED.

3843—Chicago House, recently incorporated, desires exclusive selling agency for automobile specialties in all the Central States.

3867—Massachusetts House, engaged in the painting business, is interested in securing the agency for automobile equipment, and pleasure and commercial car accessories and supplies.

3862—Ohio Garage is in the market to represent makers of automobile equipment, and pleasure and commercial car accessories and supplies.

3825—Iowa House, handling two lines of cars, desires the agency for pleasure and commercial car accessories and supplies.

3872—Tennessee Company, a recent entrant to the automobile field, desires the agency for pleasure car accessories and supplies.

3552—Kentucky Concern, recently incorporated, desires the agency for tires.

3792—Indiana House, recently incorporated, would take the agency for pleasure car accessories and supplies.

3892—Kansas Garage, established but a short time, desires the agency for pleasure car accessories, supplies and equipment.

3863—Ohio Company, maintaining a garage, is interested in the agency for automobile equipment, and pleasure car and motor truck accessories and supplies.

3854—Tennessee Company, recently established, will handle a full line of automobile supplies and accessories.

3856—Indiana House, occupying a new modern garage, will accept the agency for automobile equipment, and pleasure car and business wagon accessories and supplies.

3826—Canadian Dealer, well located in a large city, is interested in the agency for automobile supplies.

EQUIPMENT NEEDED.

6735—Kentucky Concern is in the market for a motor generator set and rectifier, and air compressor.

6738—Tennessee House is interested in garage and repair shop supplies of all kinds.

6737—Indiana Company is in the market for repair shop equipment.

6786—Ohio Garage is interested in information concerning garage and repair shop equipment and supplies, including machine tools, etc.

6789—Kansas House, recently incorporated, is in the market for garage and repair shop supplies and equipment, and machine tools.

6792—Garage in Washington, D. C., is interested in information concerning machinery for garage use, as well as repair shop supplies and equipment.

6756—Indiana Supply House desires information concerning garage and repair shop equipment and supplies, including machine tools, etc.

6782—Iowa Concern, in a large city, is in the market for garage and repair shop equipment, including machine tools.

6781—Ohio Company is in the market for a line of garage equipment and supplies.

6783—Massachusetts Company is interested in information concerning garage and repair shop equipment and supplies, including machine tools, etc.

MISCELLANEOUS OPPORTUNITIES.

7444—Virginia Hardware Concern is in the market for a business wagon rated at from 1500 to 2000 pounds.

7449—New Jersey House desires addresses and information concerning makers of tops for differing kinds of bodies.

7461—New York Dealer requests information concerning various makes of oils, and quotations on barrel or half-barrel lots.

7474—Massachusetts Man has perfected a new carburetor and is desirous of communicating with manufacturers of carburetors or others who might be interested in its production.

7476—North Carolina Board of Commerce is seeking to interest some one in locating an automobile repair shop in its city.

7480—Georgia Concern, interested in the manufacture of cyclecars, seeks information from makers of wheels, axles, steering gears, frames, bodies, etc.

7484—New Jersey Man is seeking information relative to the details and prices on mohair tops and fore doors for touring cars.

BUSINESS DIFFICULTIES.

The Union Savings Bank & Trust Company, Cincinnati, O., as trustee for the holders of $150,000 of bonds, has taken possession of the plant and property of the Sandusky Auto Parts & Motor Truck Company, Sandusky, O. It is understood that the latter concern finds itself in financial difficulties because of the recent failure of the Michigan Buggy Company, Kalamazoo, Mich.; property and cash reaching a total of some $150,000 being tied up thereby. The plant will be kept in operation.

The K-R-I-T Motor Car Company, Detroit, Mich., has been granted an extension of time until Feb. 1, 1914, and in the meantime the affairs of the concern are to be administered by a committee representing four of the creditors, the Union Trust Company and two members of the company. One hundred creditors were represented at the meeting, their claims totalling some $800,000, but all were satisfied that the company could proceed and make money.

The Great Western Automobile Company, Peru, Ind., has called a meeting of its creditors for the purpose of discussing plans whereby additional capital and an extension of time may be secured. The company is said to be in need of funds to meet current liabilities, although it is anticipated that production will be continued.

The Searchlight Protective Association, composed of representatives of the creditors and officials of the Searchlight Gas Company, with plants in Warren and Canton, O.; Chicago, Minneapolis, Bexar county, Tex., and Harrison, N. J., has purchased this property at receiver's sale for $175,000.

The Security Trust Company, receiver for the R-C-H Corporation, Detroit, has issued a statement showing liabilities of $1,998,114.16 and assets of $866,552.89.

The Pilgrim Garage Company, 107 West Brookline street, Boston, assigned for the benefit of creditors, to Bernard J. Killion.

Taxi Motor Cab Company, Boston, Mass.; petitioned into bankruptcy last March; schedule of liabilities, $211,-592; assets, none.

Tobin Whichway Signal Company, 48 Walker street, New York City; liabilities said to be $13,000; assets, $2000.

Edward Bean, New Haven, Conn.; garage; claims of $3000.

Jeremiah Surrette, 50 Gould street, Stoneham, Mass.; dealer; liabilities, $3300; assets, none.

La Buire Import Company, 1947 Broadway, New York City; liabilities, $4131; assets, $3246.

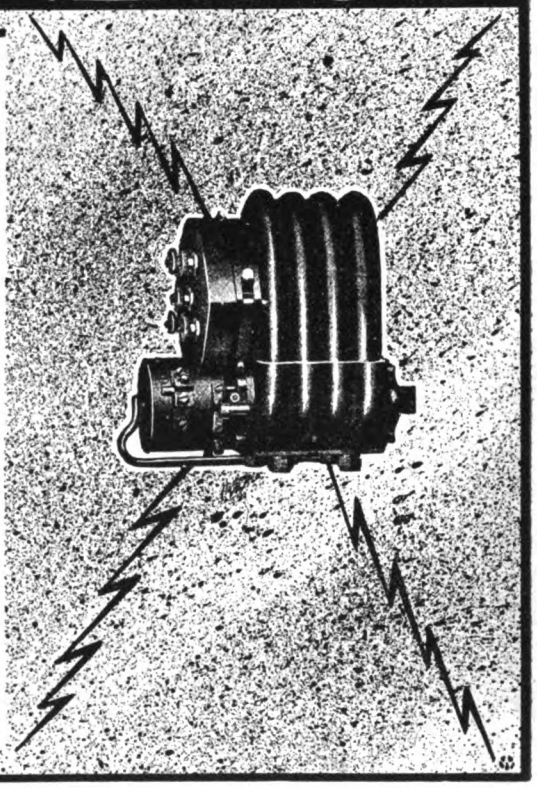
HECO MAGNETOS

INSURE A STEADY SPARK AT ANY R. P. M.



HECO MAGNETOS are the product of experts specialized in the electrical business. They embody all that the electrical industry knows about magnetos.

By our special method of winding the secondaries we are able to positively guarantee them against burning out or breaking down.

HECO MAGNETOS supply a spark of equal intensity for any number of revolutions per minute.

We also make the well-known HECO COILS and HECO COMBINATION PRIMERS and SPARK PLUGS. Let us send you our complete catalog.

Repair Tires

BIG PROFIT—SMALL CAPITAL

MEN, tire repairing is a mighty profitable business. And it requires very little capital to buy complete equipment. You can get an Akron-Williams—the **BEST** made at $125.00 and up.

You have an unlimited field. 40 million dollars was spent this year for tire repairs.

With the big profits, you can pay for equipment the first year and make money besides.

Quality Means Success

Your success depends upon the quality of your work. Quality work depends on quality equipment. So you should equip with Akron-Williams. Then your success is assured.

Akron-Williams Best Made

The fact that these leading **Tire Makers** use Akron-Williams equipment, proves it is the **best.**

Akron-Williams equipment is used by Firestone, Goodyear, Diamond, Hartford, Republic, Pennsylvania, Revere, Consolidated, Empire, U. S., Hood, and many others—27 out of the 30 leaders.

Localized Heat

That's a big feature of Akron-Williams repair outfits. The three separate steam chambers give heat just where wanted—an exclusive, patented feature.

We Make Everything

used in tire repairing. And we make tire repair plants of any capacity.

Get Our Book

Write today for our Catalog No. 12. It tells all. Get started in this profitable business. The demand is increasing every day.

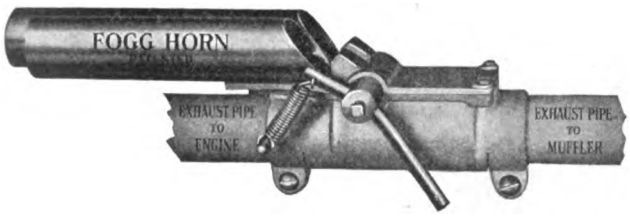
THE FOGG HORN
FOR FORD CARS



Made for people with SMALL CARS who want to make a BIG NOISE.

ATTACHED between MUFFLER and ENGINE by any repair man, in thirty minutes' time. Is not affected by LEAKY MUFFLERS and throws the sound ahead instead of leaving it behind.

Note the simplicity of Construction, the few moving parts. Blows at low speed without racing motor. Will not clog or cause Back pressure.

The ONLY EXHAUST HORN made that will blow satisfactorily on all FORD CARS.

Can be placed ahead of cut-out and can be used when cut-out is open.

Guaranteed for life of car. Attractive proposition to the trade. Write for descriptive matter.

You're Never Cornered with a Starrett Ratchet Wrench

It will turn any standard nut or bolt in all sorts of difficult places—places where the ordinary monkey wrench is useless. For working about an auto, there's no tool like it. The ratchet permits rapid action with only a short arc swing. The extension reaches into otherwise inaccessible places. With this wrench you need never be stalled because of a breakdown that requires a drill, for the drilling attachment furnished with the wrench takes any twist drill from 1/8" to 1/2" and makes repairs of this kind easy. A reversible screw driver makes it handy for turning screws of various sizes, too.

Send for catalog No. 20 G.T. and see the whole Starrett line of fine tools. It's worth while.

Why don't you carry a line of Starrett Tools?

THE L. S. STARRETT COMPANY

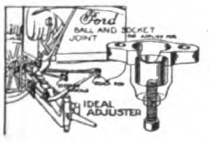
Equip Your FORD with IDEAL ADJUSTERS
BALL AND SOCKET JOINT

Easy to Install
Easy to Adjust
Made Especially for the FORD Car



Stop All Noise and Rattle
FORD Radius Rod and Steering Rod

The largest size is used for adjusting front end of radius rod, and enables you to take up at any time all lost motion on these parts, also eliminates the rattle and noise. All this is done by a turn of the setscrew which tightens the bearing on the inside.

The small size is used for adjusting the ball and socket joints on the steering gear connecting rod.

We guarantee all adjusters for the life of a car and they are so simple they can not work out of adjustment or need repair.

WILL FIT ANY FORD MODEL. Will give territory and special discount to dealers. **List Price, Large Size, $2.00; Small Size, $1.75.** If unable to purchase from your dealer, order direct. Manufactured by

JOHN A. VANSICKLE, 2122 East Washington St. INDIANAPOLIS, IND.

FORD SPECIALTIES

Radiator Compound—This is especially prepared for us and it will absolutely stop and prevent further leaks in Automobile Radiators and it will not interfere with the circulation of the water or clog the pipes in any way. This solution does not harden until it strikes the atmosphere and when it leaks, the outside of the hole is permanently sealed.

Price per can, large enough to treat two Fords **$1.00**

Steering Gear Bushing Set—Consisting of four large and two small bushings as shown in cut. Ford No. 2713-2714. These bushings are turned from high grade bearing bronze and a set will outlast three of the kind you are familiar with.

Price for complete set of six **$1.00**

Ford Piston Rings—These rings are made from the very best close grained gray iron and each ring is cast individually instead of being cut from a pipe shaped casting. They are carefully machined and accurately ground to size. They are superior in every way to the ring you are familiar with and they cost no more.

Price **17c**

Emergency Brake Shoes—These shoes are made of the best material and the machine work is better than on the regular shoes.

Price, gray iron....$1.00 pair
Manganese bronze..$2.50 pair

Ford T Hub Caps—There are very few Ford owners that run a season without mashing a hub cap and it is a good policy to carry an extra one in your tool box. Our caps are guaranteed to fit and are made from heavy gauge brass.

Price ..... **35c each**

Valve Grinder—The cut shows our new steel grinder for Ford cars. This is by far the best device on the market for this purpose and is made throughout of high grade steel, nickel plated, mahogany handle. This is the only grinder on the market that will fit on the last valve of the Model T Ford and it will last a lifetime.

Price **75c**

Ford Hood Cover—This is one of the most necessary accessories we have ever marketed for the Model T Ford. The cover is made from high grade dull finished rubber cloth and is padded with three thicknesses of very heavy felt. The front curtain rolls up and is fastened by curtain catches, same as used on the Ford tops. The hood is held in place by means of catches which snap to hood hooks. Do not confuse this cover with the cheap oil cloth kinds that are worn out and shabby after a month's use. These covers keep out the cold and keep in the heat and this will make your car start 100 per cent. better in cold weather, and as a matter of fact the APCO Hood Cover acts the same as a vacuum bottle or a fireless cooker, and in the coldest weather, a car will not chill through over night. It will also prevent water from going between the hood hinges and on to the plugs.

Price **$5.00**

Priming Plug

This plug is exactly the same as our APCO Ford Special as shown in cut except that a pet cock is threaded into the side for the quick admission of gasoline into the cylinders. This plug is equal to any $1.50 plug on the market and is guaranteed satisfactory or money refunded.

Price . . . $1.00

The Hand Klaxon, $10

THE HAND KLAXON is not entirely new. It is a development of the original Hand Klaxon manufactured in 1909 and since then gradually discontinued owing to the large demand for motor driven Klaxons.

The Hand Klaxon operates on the Klaxon principle of a steel diaphragm set in violent vibration by a toothed wheel. In the electric Klaxon this wheel is rotated by means of an electric motor; in the Hand Klaxon by a train of gears that attain high speed under pressure on the push-rod.

The Hand Klaxon has the true Klaxon note and is sold under the regular Klaxon Guarantee of permanent satisfaction.

Klaxon quality is built into the Hand Klaxon. With the Klaxon reputation to sustain it is obvious that we cannot afford to put the Hand Klaxon on the market unless it is vastly superior to any other mechanical signal at present in use.

The price of the Hand Klaxon is $10. Orders accepted November 1st; deliveries will begin December 1st.

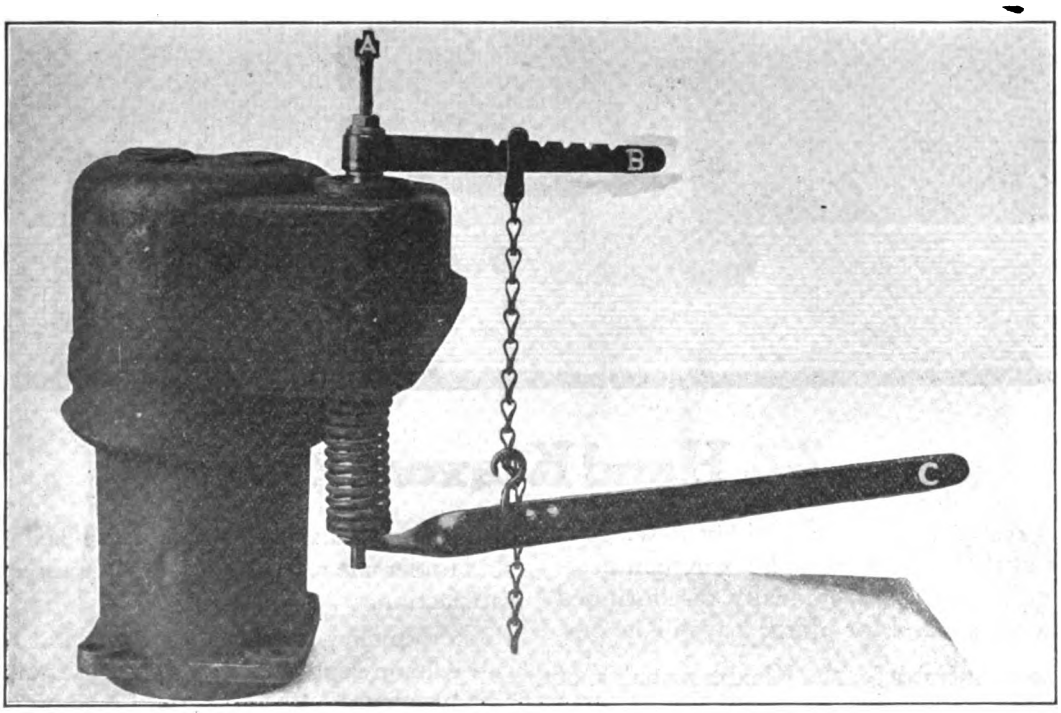
Winsor Patent Adjustable
MOTOR VALVE REMOVER

A perfect and practical tool, adjustable to nearly every motor and easily operated without wrenches, etc. Can be adjusted in a few seconds by the fingers. Positive in action. **No Slipping.**

TO THE TRADE

You have been looking for a valve remover that can be used on all makes of motors. One that is practical, simple and efficient. The demand is constant and universal among pleasure car owners. Such a tool is absolutely essential to the maintenance and operation of commercial vehicles. The market is unlimited and you want the best. The WINSOR PATENT ADJUSTABLE VALVE REMOVER as shown is the one accessory you can sell readily and because it is the best it will keep your customers satisfied. Thousands sold monthly to repairmen, garages, pleasure and commercial car owners and users. Will last a lifetime, is guaranteed and a money maker for those who sell it.



TO USE: Remove spark plug, insert Barrel A and screw down spindle with fingers which prevents valve from lifting. Attach adjustable chain to Lever B which revolves around the spindle A. Hook chain to adjustable Lever C. A slight depression, because of the enormous leverage obtained, will compress valve spring, permitting of easy removal of locking mechanism. Note the length of Barrel A and Lever B, accommodating every type of motor.

Made in sizes to fit all spark plug openings. In ordering, state size of spark plug.

LIST PRICE

Enameled black, each $2.50 Nickel plated, each $5.00 Extra barrels, each $1.50

VOL. III. PAWTUCKET, R. I., OCTOBER, 1913. No. 6.

ANNUAL MEETING OF ALCO STOCKHOLDERS.

Adverse Action on Proposition to Appoint Investigating Committee—Financial Statements Reveal Industry's Healthful Growth.

IT WOULD appear that the decision of the American Locomotive Company to abandon the manufacture of Alco cars and trucks was definitely determined by the action of the stockholders at the annual meeting of the company in New York City, Oct. 21. Since announcement of this decision was made by the board of directors in August, a number of circumstances have arisen, as a result of which there has been some question as to the possibility of a reversal in policy.

Several stockholders, headed by Isaac M. Cate, were present or were represented at the annual meeting to urge the appointment of an investigating committee composed of men outside the company, which should take up the whole question of management, etc. This proposition was defeated by a substantial majority. President Marshall delivered a statement answering many of the criticisms, and promised to explain, in the near future, other points raised during the meeting.

The Packard Motor Car Company's Truck Plant in Detroit.

Some of these were brought up by President Seelye of Smith College, Northampton, Mass., who represented the holdings of that institution in the company. Mr. Seelye desired particularly to learn why it had become necessary to devote a large sum from the profits of the company toward a deficit in the automobile department. Mr. Marshall promised to take up this matter in his forthcoming statement.

PAYS STOCK DIVIDEND.

Packard Motor Car Company Increases Capital to $16,000,000.

At the annual meeting of the Packard Motor Car Company, Detroit, the stockholders approved the recommendation of the directors for the distribution of a stock dividend of 40 per cent. in common stock among owners of such stock in the company. In addition, the capital of the company was increased from $10,000,000 to $16,000,000, by adding $3,000,000 to the common and a like amount to the preferred, thus raising the total of each from $5,000,000 to $8,000,000, Practically all of the stockholders acquiesced in the plan of waiving their right to subscribe to the

Digitized by Google

$1,000,000 of new common which will remain after the stock dividend, and similar action was taken with respect to the $3,000,000 of the new preferred stock.

President H. B. Joy explains that this action is merely the execution of a plan which has been in evolution for about two years. The stock dividend will be the first payment made to owners of common stock in about four years, during which earnings have been applied to increasing capital investment by making additions to the plant and other improvements. Mr. Joy adds that about $1,000,000 of Packard stock is owned by Packard employees, who have availed themselves of the opportunity to acquire it at par.

The annual report of the company shows the following:

ANNOUNCES MONDEX-MAGIC CAR.

Aristos Company to Produce Two Models Utilising New Sleeve Valve Motor.

Announcement has been made by the Aristos Company, New York City, that it will produce the Mondex-Magic cars in two models, a four-cylinder and a six. The chassis, which will be built by the Palmer & Singer Manufacturing Company, Long Island City, N. Y., and will be fitted with Magic sleeve valve motors, under license from the Motor & Gear Improvement Company, New York City, which has the American rights.

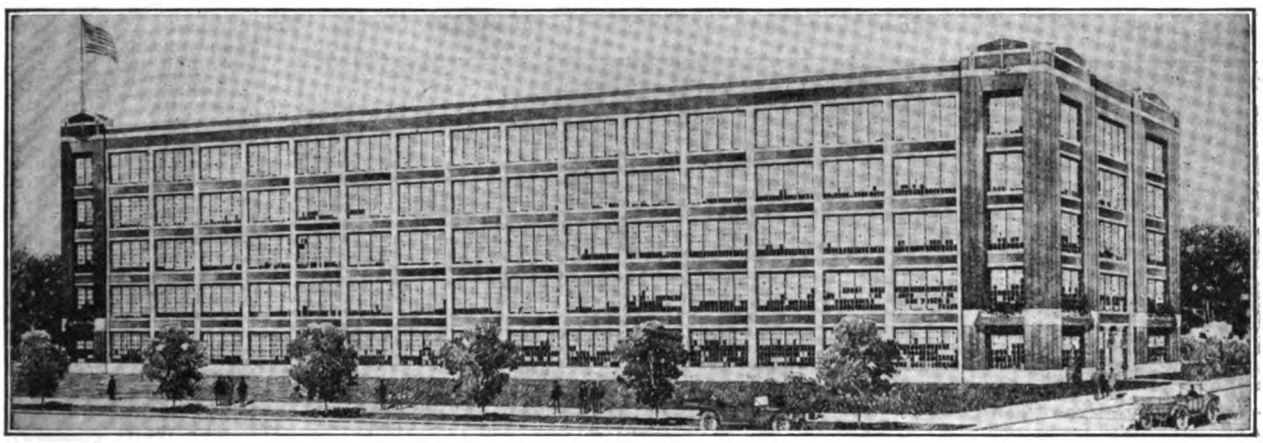
NEW BUILDING IS COMPLETED.

Gray & Davis Has What Is Claimed to Be Largest Plant of Its Kind in the World.

The new building of Gray & Davis, just completed on the Cambridge, Mass., side of the Charles river is claimed to be the largest factory in the world devoted exclusively to the production of electric lighting and motor starting systems. The new plant, built of reinforced concrete with tapestry brick exterior, has a total floor space of 180,000 square feet, and will afford employment for nearly 1000 men.

The main structure is five stories high, 380 feet long and 60 feet wide, with a 10-story extension on the rear, each story of which is half the height of those in the main building. The extension will include the lockers, wash rooms, pattern vaults, etc.

Heavy duty machines, presses, stamp mills, etc., buffing and hardening rooms will be on the ground floor of the main building, and the raw material comes in on this floor and will be distributed on a miniature railroad. General offices, private offices of the heads of departments, stockroom, wiring room and battery department will be located on the second floor. The third floor will contain the assembling and light machine work departments, and half the space will be devoted to testing and inspection rooms. The small parts and detailed electrical work will be done on the fourth floor, with space afforded for the experimental department. The top floor will include the electrical engineers' department, draughting rooms, chief engineer's office and a restaurant and rest rooms for the employees.



Recently Completed Factory of Gray & Davis, Inc., on the Bank of the Charles River in Cambridge, Mass.

ERECTING BIG ADDITION.

C. A. Shaler Company to Provide Increased Production Facilities for Garage Steam Vulcanizer.

Work has been started on the erection of a three-story addition to the present plant of the C. A. Shaler Company, Waupun, Wis., which it is anticipated will give ample floor space and facilities for practically doubling the output of the company. The new structure will be devoted to the manufacture of the garage steam vulcanizer, which was placed on the market about a year ago.

TO CONTINUE WARREN PRODUCTION.

Understood That New Concern Has Been Organized with A. D. Dunk at Its Head.

The Warren Motor Car Company, a close corporation, a report from Detroit states, will be organized to continue the manufacture of Warren cars. It is understood that A. D. Dunk, president of the Auto Parts Company, will be head of the new concern, which has purchased the stock of the old Warren company, and that the policy will be to continue the models along the same lines as before, with a smaller production.

BIG COMBINATION IN MINNEAPOLIS.

Standard Motor Company Organized to Take Over Two Concerns in the Middle West.

The Standard Motor Company has been organized in Minneapolis with a capital of $6,000,000 and has plans under way for the erection of an automobile manufacturing plant to cost $3,000,000. According to the statement the company will take over the Minneapolis Motor Company of Minneapolis and the Colby Motor Company of Mason City, Ia. F. E. Kenaston, president of the Minneapolis Threshing Machine Company; M. J. Scanlon of the Brooks-Scanlon Lumber Company and the Scanlon-Gibson Lumber Company, and P. M. Starns, vice president of the American Timber Holding Company, are mentioned as among those interested in the new concern.

ELEVEN NEW MEMBERS.

Motor & Accessory Manufacturers Announces Several Additions to Its Ranks.

Announcement has been made by the Motor & Accessory Manufacturers, New York City, of the election of new members as follows: Cleveland Tanning Company, manufacturer of leather, Cleveland, O.; Racine Manufacturing Company, automobile bodies, Racine, Wis.; Benford Manufacturing Company, spark plugs, timers, oil gauges, lighters, screw machine work, etc., Mt. Vernon, N. Y.; Gemmer-Detroit Starter Company, air pumps, garage plumbing outfits and air starters, Detroit; McGraw Tire & Rubber Company, tires and inner tubes, East Palestine, O.; J. M. Shock Absorber Company, J. M. Shock absorbers, Philadelphia, Penn.; F. S. Carr Company, rubberized top and seat covering material, Boston, Mass.; Torbensen Gear & Axle Company, axles, Newark, N. J.; Taylor Instrument Company, thermometers, barometers, hydrometers, etc., Rochester, N. Y.; Reynolds-Browne Company, automobile lamps, Chicago, Ill.; Knight Tire & Rubber Company, tires and inner tubes, Canton, O.

TO PRODUCE McFARLAN LINE.

New Concern Organized to Take Over Business Formerly Conducted by McFarlan Carriage Company.

The McFarlan Motor Company has been organized in Connersville, Ind., to take over the manufacture of the McFarlan cars, formerly produced by the McFarlan Carriage Company. Heretofore the product has been distributed through a selling concern known as the McFarlan Motor Car Company. The capital of the new corporation is $100,000 and the incorporators are Alfred H. McFarlan, Edward W. Cotton and Burton M. Burrows. A petition in bankruptcy was filed recently against the McFarlan Carriage Company.

The American Motors Company, Indianapolis, Ind., has elected the following officers for the ensuing year: President and general manager, J. I. Handley; vice president, F. E. Smith; chairman and treasurer, V. A. Longaker; assistant treasurer, J. D. Bright; secretary, J. E. Kepperley.

GENERAL NEWS OF THE MANUFACTURERS.

The Gaulois Tire Corporation, New York City, importer of the product of one of the largest tire manufacturers in France, announces that it will give its customers full benefit of the tariff reduction from 35 per cent. to 10 per cent.

The H. W. Johns-Manville Company, New York City, announces that it has taken over the manufacture and distribution of the Mezger Soot-Proof spark plug, and in the future this product will be known as the J-M (Mezger) Soot Proof. By the terms of sale R. M. Owen & Co., will retain its interest in the spark plug. C. A. Mezger, Inc., New York City, was the former maker.

The Moon Motor Car Company, St. Louis, Mo., on account of the large increase in business and consequent demand for calls on prospective dealers and owners, has found it necessary to add four new salesmen to its travelling staff. The new men are J. A. O'Brien, assigned to northern Iowa and Minnesota; W. K. Ellis, the rest of Iowa, Nebraska and the Dakotas; L. R. Collins, Illinois and Kentucky; G. E. Bonney, Missouri and Kansas.

The B. F. Goodrich Company, Akron, O., reports that the branch factory established in France some three years ago is making a fair profit on European goods.

The Crow Motor Car Company, Elkhart, Ind., is issuing a neat wall folder calling the attention of automobile salesmen to the selling points in the Crow Elk-Hart line.

The International Motor Company, New York City, maker of the Mack, Saurer and Hewitt trucks, has inaugurated a new selling policy in which the customer pays 25 per cent. of the purchase price upon delivery, and the remainder in 12 monthly payments.

The Stromberg Motor Devices Company of Chicago, Ill., is to open a new branch at 146 West 56th street, New York City.

The Blaisdell Machinery Company, Bradford, Penn., it is reported, will soon take up the manufacture of gas engines. C. A. Roberts, for some time connected with the National Transit Company, Oil City, Penn., and later president of the Bellefonte Engineering Company, is now connected with the Blaisdell concern.

"Noon Hour" at the Factory of the Electric Storage Battery Company, Philadelphia, Showing About 1000 Employees Gathered at Allegheny Avenue and 19th Street.

The Cadillac Motor Car Company, Detroit, at the close of business on Sept. 30 had manufactured and shipped 2778 of its 1914 models. This is four times as many cars as were manufactured and shipped during the similar period of the 1913 season.

The Firestone Tire & Rubber Company branch managers and salesmen's convention was held in Akron, O., Oct. 7-10. Representatives of the company from all over the country attended the conference.

William C. Riley, president of the Valley Iron Works of Williamsport, Penn., has taken over the Hatfield Motor Truck Company of Elmira, N. Y., and will operate the business in the future.

Fred I. Johnson, Fitchburg, Mass., is president and general manager of a new company that has been formed to manufacture automobile tires without rubber.

The Goodyear Tire & Rubber Company, Akron, O., through President Sieberling, denies reports of any intention of merging its interests with those of the United States Tire Company.

W. F. Perez, Chicago, inventor of an automobile fender, has organized a company with a capital of $250,000 to manufacture his invention. Interested in the company with him are Carl C. Jensen and others.

The Thomas B. Jeffery Company, Kenosha, Wis., has installed a new double toggle drawing press, with capacity of 1500 tons, for the production of the cowls over the dash of Rambler Cross Country models.

A. R. Welch, well known in the automobile world through his connection with the former Welch Motor Car Company, is connected with a new company that has been formed in Detroit for the purpose of manufacturing cyclecars.

The General Service Engineers, Detroit, has entered the cyclecar manufacturing industry.

The Ford Motor Company, Detroit, has opened a South American selling and service branch in Buenos Aires. E. H. Hampton will be in charge as manager.

The Hampton Kerosene Carburetor Company, New York City, has secured property for a factory site at the foot of Gordon street, Perth Amboy, N. J.

The Lozier Motor Company, Detroit, reports that the directors have subscribed for $500,000 of the company's stock in order to finance the increased operations planned for 1914.

The Mercer Automobile Company, Trenton, N. J., maker of Mercer cars, is issuing a house organ under the title of Mercer Magic. W. A. Smith, advertising manager, is director of the new publication.

The John W. Blackledge Manufacturing Company, Chicago, Ill., calls attention to the fact that the name of its Velvet auxiliary springs has been changed to Velvet shock absorber. The general offices of the company are located at 2110 Michigan avenue, Chicago, while the New York branch, which looks after the trade in the East, is at 74th street and Broadway.

Charles H. Besley & Co., Beloit, Wis., has broken ground for new buildings which will triple the size of its shops. The concern produces grinding and polishing machines.

The Board of Trade, Waterloo, Ia., is negotiating with the Denver Motor Truck Company, Denver, Col., to locate its gasoline-electric truck plant in that city.

The Firestone Tire & Rubber Company, Akron, O., has established a separate sales and shipping department to take care of its increasing foreign business, with C. O. Brandes in charge as manager.

The Electric Storage Battery Company, Philadelphia, is well known to motorists because of its production of Exide, Hycap-Exide, Thin-Exide and Ironclad-Exide batteries for electric vehicles. The company has been engaged in this field since 1888, and that its factory force is sufficiently large to justify its claim as one of the leading battery makers in the country is indicated by the accompanying illustration. The company maintains branches in New York, Boston, Chicago, St. Louis, Cleveland, Atlanta, Detroit, Denver, San Francisco, Los Angeles, Seattle, Portland, Ore., and Toronto, Can. All told there are some 886 Exide battery distributors.

The White Company, Cleveland, O., is building an addition to its plant at East 79th street. The main building will be enlarged by the erection of a new building to be 30 by 240 feet, at a cost of $10,000.

The Sheffield Motor Works, Sheffield, Eng., has closed a contract with the United States Light & Heating Company, Niagara Falls, N. Y., and hereafter will equip all its cars with the U-S-L starting and lighting system.

The Walker Tire Chain Company has been organized in Bridgeport, Conn., to produce a new anti-skidding device invented by Charles Smith and John Anderson. H. F. Rhorman, Zanesville, O., is vice president.

The Grant-Lees Machine Company, Cleveland, O., has just completed a new addition to its factory and now has production facilities almost doubling what they were a year ago.

The Champion Spark Plug Company has been awarded a permit for the erection of a new factory building at Avondale and Upton avenues, Toledo, O.

The Stromberg Motor Devices Company, Chicago, is to open a factory branch at 146 West 56th street, New York City.

The Perfection Spring Company, Cleveland, O., has leased a building on East 65th street and will utilize this as an addition to its plant.

Henry J. Arnold and associates have started a plant in Denver, Col., for the manufacture of a substitute motor fuel for gasoline.

The Abbott Ball Company, Elmwood, Hartford, Conn., has awarded the contracts for a one-story addition to its plant.

G. L. Berg, Seattle, Wash., has invented a new headlight, termed the Pathfinder, and a company has been organized with capital stock of $35,000. William Piggott and G. D. Colwin are associated with him in the enterprise.

The F. L. Moore Truck Company has moved from Los Angeles, Cal., to a new factory at Torrance. The new building is of concrete and steel, 100 feet by 500 feet, with glass sides and top.

The John W. Brown Manufacturing Company, Columbus, O., has started work on additions to its plant for the manufacture of lamps for Ford cars.

George M. Dickson, General Manager, National Motor Vehicle Company.

The National Motor Vehicle Company, Indianapolis, Ind., reports the fiscal year ending Sept. 1, 1913, was the best in the 14 years' history of the company. So well pleased were the stockholders that a resolution of thanks and congratulations was passed, which gave a large measure of the credit for this good showing to George M. Dickson, general manager of the company.

The Bundy-Goebel Manufacturing Company, has been formed in Detroit for the production of the Tell Tale, a gasoline gauge.

The Chicago Pneumatic Tool Company, Chicago, has declared a quarterly dividend of one per cent., which was payable Oct. 25.

The Cincinnati Car Company, Cincinnati, O., is to erect an assembling depot near its main plant on Spring Grove avenue at a cost of $30,000.

REMOVALS AND NEW BUILDINGS.

Max Rosen, Newburg, N. Y., is interested in the establishment of an automobile factory in that city.

The Gadabout Motor Corporation is said to be negotiating with the chamber of commerce in Poughkeepsie, N. Y., for a factory site in that city.

The Siebers & Raisch Pattern Works, 686-690 National avenue, Milwaukee, Wis., has established a branch factory in Waukesha, where motor and aluminum castings will be the chief product.

The Ruby Manufacturing Company, Jackson, Mich., has opened offices at 604 Press building, where estimates and full particulars concerning the Ruby steel constructions can be secured for the asking.

The Galena Signal Oil Company, Kansas City, Mo., has established a general distributing branch at Superior, Wis., where a $15,000 warehouse and office building will be erected.

The Ford Motor Company, Detroit, has awarded the contract for a new building at Highland park to the Selfen Brock Construction Company at an estimated cost of $500,000.

The Edward G. Budd Manufacturing Company, Detroit, has sold its plant to the Peter Smith Heater Company. The machinery, stock and apparatus of the Budd company is being moved back to Philadelphia.

H. R. Schoch, Philadelphia, Penn., is preparing to erect an automobile construction plant at Hunting Park avenue and Stokley street, at an approximate cost of $100,000. Mr. Schoch will manufacture automobile bodies and parts and assemble motor vehicles.

The H. R. Johnson Economizer Company, 1436 Spring street, Philadelphia, Penn., is said to be contemplating the erection of a factory in Toronto, Ont.

The Lord Baltimore Motor Truck Company, it is reported, is having plans prepared for the erection of a large truck plant at Canton, near Baltimore, Md., to be two stories high, 600 by 125 feet.

The William C. Robinson & Son Company, Philadelphia, has established an agency in San Francisco, Cal., for the distribution of Autoline, a lubricating oil produced by it.

The Service Recorder Company, Cleveland, O., manufacturer of travel recorders for motor trucks, has established new branch agencies in Ponce and San Juan, Porto Rico. H. E. Gates is in charge.

The Ford Motor Company is to erect an assembly building at a cost of $400,000, at the corner of Brookline street and Charles River road, in Cambridge, Mass. The building will be five stories high, 455 feet long, built of concrete with steel reinforcements throughout.

The Meeley Rubber Company, Philadelphia, has erected a new rubber goods plant at 680 North Broad street.

The Cameron Manufacturing Company has completed the moving of its plant to West Haven, Conn., and expects soon to have the new plant in operation.

The Pharis Tire & Rubber Company, Columbus, O., is adding two buildings to its plant, one 73 by 100 feet and the other 22 by 40.

The Grant Motor Car Company, Detroit, is reported to have plans for the removal of its plant to Dayton, O.

The National Tire & Rubber Company, East Palestine, O., has had plans and specifications completed for a new factory building. The new structure will be two stories high, of reinforced concrete, 44 by 252 feet, and will include the main building and power plant. Equipment, in the way of engines, boilers, heaters, pumps and the like, will be required.

The Fisher Motor Company, Walkerville, Ont., has purchased and taken possession of the entire plant and machinery of the Tudhope Motor Company at Orilla, Ont.

The Ford Motor Car Company is to erect an assembling plant at Houston, Tex., at an approximate cost of $200,000. The Central Contracting Company, Detroit, has been given the contract, and the building is to be completed by April 1, 1914.

The Chalmers Motor Company, Detroit, has taken a five-year lease on the property at 250-254 North Broad street, Philadelphia, Penn.

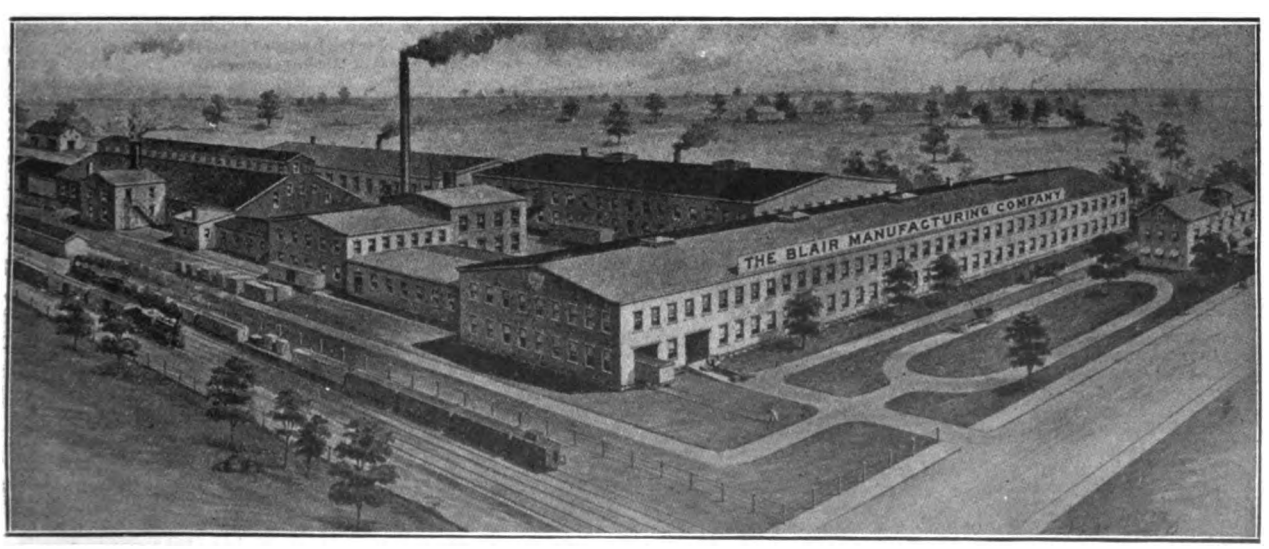
The Joseph N. Smith Company, Detroit, has purchased a site and will erect a new plant at a cost of $75,000.

The Woods Motor Vehicle Company, Chicago, Ill., has established a direct factory branch in Peoria, Ill., under the supervision of W. E. Johnston.

FINANCIAL NOTES.

The Westinghouse Electric & Manufacturing Company, Pittsburg, Penn., has declared a quarterly dividend of one per cent. on common stock, payable Oct. 30, and a similar dividend of 1.75 per cent. on preferred stock, payable Oct. 15.

The Knox Automobile Company, Springfield, Mass., has issued a statement setting forth that the business during



Factory of the Blair Manufacturing Company, Newark, O., Maker of Blair Trucks.

Digitized by Google

the month of August, 1913, showed an increase of 100 per cent. over that of the corresponding month in 1912. The factory of the company has been run continuously on a day and night schedule for the past year.

The Invader Oil Company, New York City, shows a business increase this year of 114 per cent. for February, 188 per cent. for March, 200 per cent. for April, 246 per cent for May, 231 per cent. for June, 210 per cent. for July, 218 per cent. for August, 292 per cent. for September, over corresponding months of last year. This larger business gives an average monthly increase of 212 per cent. for 1913 over 1912.

The J. I. Case Threshing Machine Company reports that gross sales for the first nine months of 1913 were $8,197,554, as compared with $7,333,655 for the first nine months of 1912.

The Hudson Motor Car Company, Detroit, has declared a stock dividend of 100 per cent., thus increasing its capital stock to $2,000,000. The annual report shows no bonded indebtedness, and that the total business done during the fiscal year amounted to $10,500,000, an increase of 50 per cent., or $3,500,000, over that for 1912.

The Hendee Manufacturing Company, Springfield, Mass., at a meeting recently, transferred its assets to a new company to be known as the Hendee Manufacturing Company. The old concern passes out of existence and the new concern is capitalized at $12,500,000, an increase of $10,000,000. The same interests that controlled the old company will control the new.

The Lozier Motor Company directors in session at Detroit voted to take up all outstanding stock to increase the manufacturing facilities of the company for 1914.

The Wagenhals Motor Car Company, Detroit, was dissolved at a meeting of the stockholders the latter part of September, and the Wagenhals Motor Company organized. The capital stock was increased from $100,000 to $500,000, and a new plant is to be built. William Pelum, W. G. Wagenhals and C. F. Ayer were elected directors. Mr. Pelum is president, Mr. Wagenhals vice president and treasurer, and Hughes E. Turner secretary.

BUSINESS DIFFICULTIES.

Arthur Crowell, automobile broker, 44 Ferry street, Malden Mass., has filed a petition in bankruptcy. Liabilities, $2205; assets, none.

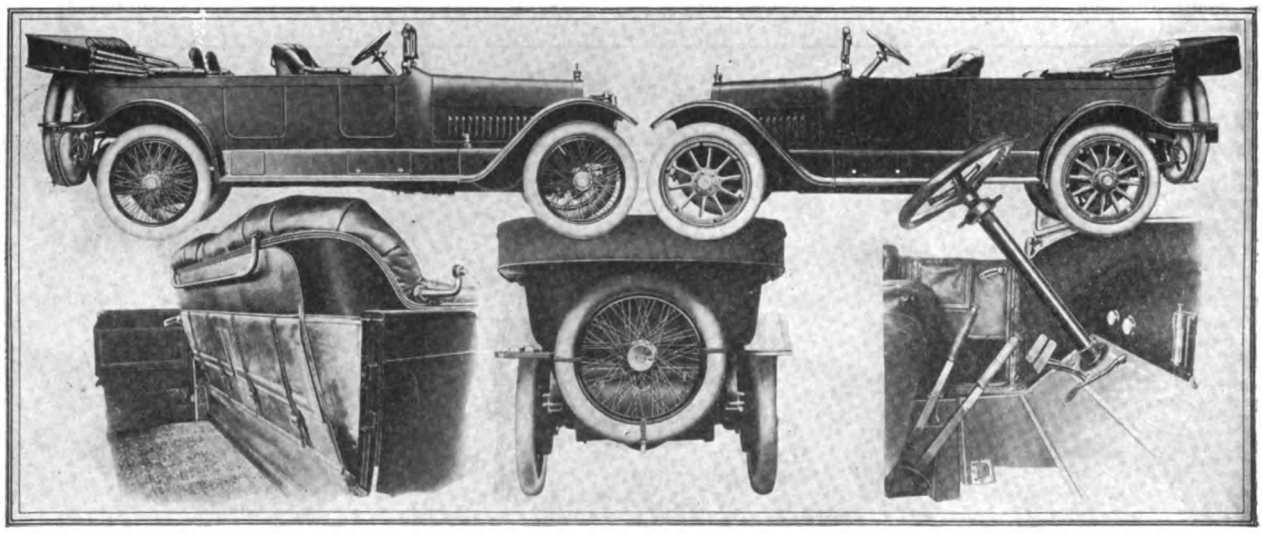
RECENTLY ANNOUNCED 1914 MODELS.

Pullman—Pullman Motor Car Company, York, Penn. Model 6-46. Remainder of the line continued. New light six-cylinder has unit power plant with bore of 3.75 inches and stroke of 5.25. Four-speed transmission with Vulcan electric gearshift. Extra long, flat front springs; three-quarter elliptic rear. Wire wheels. Price, $2400.

Havers—Havers Motor Car Company, Port Huron, Mich. Two six-cylinder models, continued from last season with but few changes, except in body design. Larger car known as 6-60, has motor with five-inch bore and 5.25-inch stroke, instead of four by 4.25. Eisemann magneto. North East starting and lighting system. Equipment very complete. Wire wheels optional.

Marathon—Marathon Motor Works, Nashville, Tenn. Distributor Herff-Brooks Corporation, Indianapolis, Ind. Champion, Winner and Runner models continued, each with touring car and roadster bodies. Improvements largely in body design. Champion and Winner equipped with electric lighting and starting. Champion motor, 4.5 by 5.125; Winner, 4.25 by 4.5; Runner, 3.5 by 4.5. Prices, Runner, $925 to $975; Winner, $1300 to $1325; Champion, $1470 to $1495.

Paige—Paige-Detroit Motor Car Company, Detroit. Models 25 and 36 continued with changes mostly in nature of refinements. Larger chassis comes completely equipped with Gray & Davis electric starting and lighting system; smaller supplies this at an extra charge. Both have unit power plants; model 25 motor, 3.75-inch bore and four-inch stroke; model 36, four by five inches. Both



Showing Some of the Features of the 1914 Stearns-Knight Line, Which Includes Three New Body Designs.

are of the L head type, with cylinders cast en bloc. Prices, model 25, $950; 36, $1275; electric lighting and starter, $75 extra.

Regal—Regal Motor Car Company, Detroit. Models T, N and NC, underslung, and C, overhung. Underslung bodies, touring car, roadster and coupe on same chassis. Overhung body, touring car. Principal changes include left hand drive, centre control, electric lighting and starting and elimination of side lights. Other changes mainly in refinement of details. Cars listed with full equipment this year. Prices, $1125 to $1600.

Buick—Buick Motor Company, Flint, Mich. Model B55. Six-cylinder touring car and roadster. Supplements new four-cylinder models, and like them has left hand drive with centre control, and the Delco combination electric lighting, starting and ignition system. Motor retains characteristic Buick overhead valves, and has bore of 3.75 inches and stroke of five, being rated by the maker at 48 horsepower. All Buicks are controlled by a single lever, operating on the ball and socket joint. Price, $1985.

Speedwell—Speedwell Motor Car Company, Dayton, O. Series H. Six-cylinder chassis with seven-passenger body. Few mechanical changes. Unit power plant. Bosch dual ignition system. Electric lighting and starting system. Left hand drive, centre control. Equipment includes: Electric horn, Warner speedometer, power air pump, Yale lock on gearshift lever, emergency gasoline supply, tire carrier of improved type, windshield integral with body, concealed tool box, and lockers under cowl. McCue wire wheels offered at an option. Either 36 by 4.5 or 37 by five-inch tires. Price, $2850.

Detroit Electric—Anderson Electric Car Company, Detroit. Models 43, four-passenger brougham with rear seat drive; 44, ladies' open victoria; 45, five-passenger brougham with front seat drive; 46, gentlemen's roadster; 47, four-passenger brougham, and 48, Duplex drive brougham. First three fitted with bevel gear rear axle. Last three have new Daimler-Lanchester imported worm gear. All are equipped with Hanlon patented rain vision window. Full aluminum bodies and fenders, and Detroit Electric shaft drive, chainless power plant continued. Price reductions on all models. Prices, $2300 to $3000.

Stutz—Stutz Motor Car Company, Indianapolis, Ind. Series E. Two chassis. E 4, four-cylinder; E 6, six-cylinder; both fitted with two-passenger, six-passenger touring and coupe bodies. Motors very much alike and both fit under the same hood. Four has bore of 4.75 inches and stroke of 5.5; six is four by five, instead of 4.25 by five as with the older six. Both are of the T head type. Four cast in pairs; six, in threes. Water jacketed intake manifold. New style of breather pipe. Individual pushrod enclosure. Clutch changed from multiple disc to cone. Electric motor starter designed by Harry Stutz and built by the Remy Electric Company. Wire wheels are offered at an option. Tires, 34 by 4.5 inches all around. Prices, E 4, $2150; E 6, $2400.

Crow Elk-Hart—Crow Motor Car Company, Elkhart, Ind. Three chassis and 10 body designs. Models D42 and D45, roadster and touring, have 35 horsepower motor four-cylinder, L head, cast in pairs. Models D52, D54, D55 and D56, roadster and touring cars, have 40 horsepower motor, four-cylinder, L head, 4.125-inch bore, 5.5-inch stroke, cast en bloc. Models D62, D64 and D66, roadster and touring cars, have 50 horsepower motor, six-cylinder, L head, 3.875-inch bore, five-inch stroke, cast in pairs. Briggs magneto on the small four, Briggs Mag-Lite ignition on the large four, and Deaco ignition, starting and lighting on the six.

Hupmobile—Hupp Motor Car Company, Detroit. One chassis fitted with five-passenger touring, six-passenger touring, two-passenger roadster and three-passenger inside driven coupe bodies. At option, all models are fitted with Westinghouse starting and lighting system, except the coupe, which has the starter only. With cars fitted with the starter, tires are carried at the rear. Changes largely in the nature of minor improvements. New and larger gasoline tank in cowl dash, with reserve tank built into the gasoline chamber. Magneto is provided with a rain shield. Prices, $1050 to $1350.

S. & M.—S. & M. Motor Company, Detroit. New concern. One chassis and four body designs—runabout, five and seven-passenger touring and limousine. Motor, Continental special, six-cylinder, 3.75-inch bore, 5.25-inch stroke, rated at 58 horsepower at 2000 revolutions. Bosch magneto, Timken front and rear axles, wire wheels with Timken hubs, Warner four-speed transmission, Gemmer steering gear, Rayfield carburetor, Mayo radiator, Parish & Bingham frame, Spicer universal joints, Firestone tires, electric starter. Springs, semi-elliptic front, three-quarter elliptic underslung rear. Left hand drive, centre control. Wheelbase, 130 inches. Weight, 3250 pounds. Full equipment. Prices, $2485 to $3500.

Marmon—Nordyke & Marmon Company, Indianapolis, Ind. Models 32, four-cylinder, and 48, six-cylinder, continued. New body designs, including three-passenger on six-cylinder chassis. New design of Northeast starting and lighting system, necessitates changes in location.

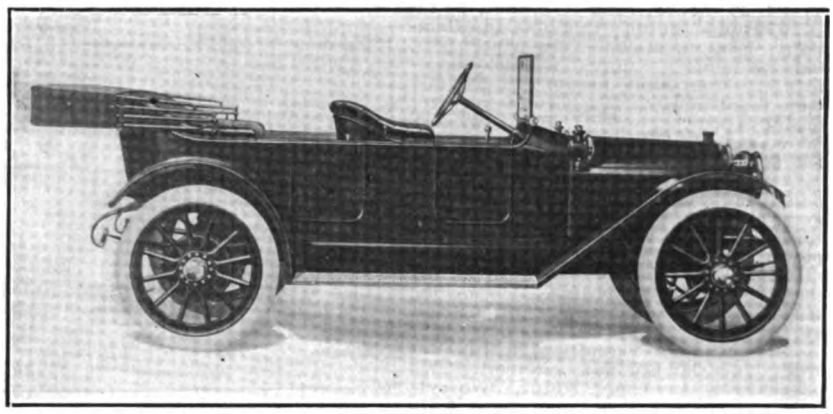
Digitized by Google

Magneto at the rear of motor instead of front. Zenith carburetor. Addition of single-cylinder motor driven air pump for tire inflation. Clutch on the four is given a wider face and slightly different spring inserts. Brake surface on the six has been enlarged in diameter and the brake adjustment is fitted with a double worm screw design. New type of front hub and steering knuckle on the six, shaped like a bullet and so arranged that the vertical spindle is directly in the centre line of the wheel. Prices, $3000 to $5000.

Flyer—Thomas Howard Company, sole factory representative, 319 Atlantic avenue, Brooklyn, N. Y. New car. Roadster. Motor, four-cylinder, four-cycle, water-cooled, cast en bloc, 2.75-inch bore, 4.5-inch stroke; barrel type crankcase, three-bearing crankshaft; vacuum feed oiling system, circulating water pump, magneto ignition. Cone clutch, 11 inches diameter, three-inch face, enclosed with flywheel. Transmission, two speeds forward and reverse. Unit power plant. Left hand drive, centre control. Springs, semi-elliptic front, full elliptic rear. Wheelbase, 100 inches. Tires, 28 by three inches, clincher rims. Wire wheels. Equipment includes windshield, two gas headlights, generator, two side oil lamps, rear lamp, tool kit, etc. Price, $495.

Howard—Howard Motor Car Company, Connersville, Ind. New six-cylinder model. Continental motor, specially designed to specifications of Chief Engineer J. C. Moore of Howard company. Exhaust system has two manifolds, two flexible exhaust pipes and two separate mufflers, the idea being that by having successive cylinders in their order of firing exhausting into alternate mufflers the possibility of exhaust gas diluting the incoming charge is effectually obviated. Bore, 4.125 inches; stroke, 5.25. Ignition, Bosch high-tension magneto and Atwater Kent system. Cone clutch. Three-speed transmission. Timken axles. Springs, semi-elliptic forward, three-quarter elliptic rear. Tires, 36 by 4.5 inches. Left hand drive, centre control. Electric lighting and starting.

Monarch—Monarch Motor Car Company, Detroit. New concern. R. C. Hupp, president. Five-passenger touring car. Motor, four-cylinder, four-cycle, cast in pairs; 3.1875-inch bore, five-inch stroke, rated at 25 horsepower; water-cooled, thermo-syphon; force feed lubrication; float feed carburetor; combined electric starting, lighting and ignition system. Leather faced cone clutch. Selective sliding gear transmission, three speeds forward and reverse. Three point suspension, motor and transmission on tubes. Drive by shaft, not enclosed; double universal joint. Semi-floating rear axle. Semi-elliptic springs forward, full elliptic rear. Pressed steel frame. Wheelbase, 110 inches. Tires, 32 by 3.5 inches. Torpedo type body, stream line, with radiator under sloping hood. Left hand drive, centre control. Equipment includes rain vision windshield, extension top, Jiffy curtains, Jones speedometer, electric horn, etc. Price, $1050.



Vulcan "27" Five-Passenger Touring Car, Having 115-Inch Wheelbase, Attractive Lines and Full Equipment.

Oldsmobile—Olds Motor Works, Lansing, Mich. Model 54. Five and seven-passenger touring car bodies. Larger motor; 4.25-inch bore and 5.5-inch stroke, instead of 4.125 by 4.75; increased rating from 40.8 to 50 horsepower. Six cylinders, still of L head type, but cast in sets of three. Valve size increased from 1.75 inches to 1.9375. Latest type Delco starting, lighting and ignition system. Cooling by centrifugal pump, instead of gear. Later type of Oldsmobile float feed carburetor. Wheelbase of five-passenger now 132 instead of 135, and of the larger car 139. Tires, 36 by five inches, on Baker straight side demountable rims. External appearance is not greatly changed, except that bodies are hung lower than formerly. Prices, $2975 to $3150.

Imperial—Imperial Automobile Company, Jackson, Mich. Models 32, 33 and 34, all four-cylinders. Model 44 now a six instead of four. An entirely new six with seven-passenger body. Models 32 and 33 on same chassis with new motor, 4.25-inch bore and 5.25-inch stroke, instead of four by 5.5. Cylinders cast en bloc. Model 34 unchanged except for refinements. Model 44 motor has cylinders cast in sets of three, 3.75-inch bore, 5.25-inch stroke. New chassis has motor cast in threes, 4.125-inch bore, 5.25-inch stroke; unit power plant; three point suspension. Multiple disc clutch, Raybestos faced. Three speeds forward and reverse. Full floating rear axle. Springs, semi-elliptic forward, three-quarter elliptic rear. Wheelbase, 137 inches. Tires, 36 by 4.5 inches. Body hung low. Left hand drive, centre control. All models now electrically lighted and started. Prices, $1500 to $2500.

Moon—Moon Motor Car Company, St. Louis, Mo. Light six-50 Streamline. Motor differs from new model 42 four-cylinder engine in being of the L head type. Cylinders cast in threes. Bore, 3.75 inches; stroke, 5.25. Maker's rating, 58 horsepower at 1800 revolutions. Multiple disc clutch. Four speeds forward and reverse, direct drive on the third. Full floating rear axle. Wheelbase, 129; tread, 56 or 60. Tires, 35 by 4.5 inches. Weight, 3840 pounds. Delco electric light, starting and ignition system. Motor tire pump. Two types of bodies, both of the streamline design, one seating five, and the other six or seven. Also, new Moon coupe on four-cylinder chassis. Motor T head, cast in pairs, 4.5-inch bore, five-inch stroke. Three-speed transmission. Body fitted with sashless windows, extra wide driving seat and special compartment for storing spare tires. Prices, $1750 to $2225.

Packard—Packard Motor Car Company, Detroit. Model 38. Two types of chassis, touring and phaeton, and 19 body styles. Changes include worm bevel gear drive, recently announced, and the following: Cylinders cast in threes. Siamese exhaust manifold with separate passage for each set of cylinders. New oiling system; all piping within crankcase and camshaft drilled to carry oil. Bosch duplex ignition system; all wiring enclosed within a compartment in unit with the water outlet manifold. Bijur electric lighting and starting system. Wheelbase increased to 140 inches. Shape of rear axle altered. Rear springs slung under axle. Brake drums increased to 17 inches diameter; brake cross shafts mounted on axle housing; brake rods within chassis. Plate clutch brake instead of band. New gearshift, eight inches further forward to allow left side entrance; new door on drive side. Tapering hood and cowl to conform. Tires carried at the rear on all models. Prices, chassis, $3100; touring car, $3850; similar reduction in all body styles.

Stearns—F. B. Stearns Company, Cleveland, O. Coupe and Sedan added to former line, fitted to either four or six-cylinder chassis. Knight motor continued. Six remains practically the same, while transmission in the four is moved from rear axle to amidships location. All models fitted with sloping hood, following so-called foreign practise; left hand drive, centre control and wire wheels, the last named being optional.

Vulcan—Vulcan Manufacturing Company, Painesville, O. Model 27. Five-passenger touring car. Motor, four-cylinder, L head, en bloc, 3.375-inch bore, five-inch stroke. Lubrication, combination positive feed and constant level splash. Thermo-syphon cooling. High-tension magneto. Unit power plant, three point suspension. Cone clutch. Selective transmission, three speeds and reverse. Semi-floating rear axle. Service brakes, external contracting; emergency, internal expanding. Semi-elliptic springs forward, three-quarter elliptic rear. Clincher rims with 32 by 3.5-inch tires. Left hand drive, central control. Price, $850.

Haynes—Haynes Automobile Company, Kokomo, Ind. Models 26, 27 and 28. First two, six-cylinder, practically only difference being in the length of wheelbase. Model 28, four-cylinder. All motors have bore of 4.25 inches and stroke of 5.5, L head type, cast in pairs. Cooling, centrifugal pump. Lubrication, force feed and splash. Stromberg carburetor. American Simms magneto. Haynes contracting band clutch. Three-speed transmission. Left hand drive. All models fitted with Vulcan electric gearshift and Leece-Neville electric lighting and starting system. Prices, $1985 to $3850.

Cole—Cole Motor Car Company, Indianapolis, Ind. Series Nine. Three models of Series Eight have been reduced to two, a four and a six-cylinder. Held to be a standardized product. Motors have same bore and stroke, 4.25 by 5.25 inches. Cylinders cast in pairs. Delco lighting and starting. Taylor Noll pump. Left hand drive; centre control. Two, four and five-passenger bodies on four; two, six and seven-passenger, coupe and limousine on six. Prices, $2350 to $4000.

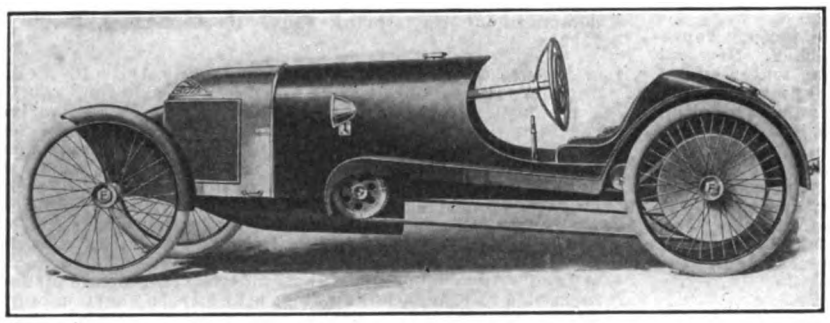
SOME RECENTLY ANNOUNCED CYCLECARS.

Victor—Victor Motor Car Company, 271 Diamond street, Philadelphia, Penn. Two passengers, side by side. Motor, four-cylinder, water-cooled, 3.25-inch bore, four-inch stroke, cone clutch, three-speed transmission, bevel driven rear axle, wire wheels, 30 by three-inch tires. Wheelbase, 90 inches; tread, 52. Equipment includes top and windshield.



Falcon Roadster Type, Produced by Concern in Cleveland, O.

Davis—Davis Cyclecar Company, Detroit. Special Spacke motor. Three-speed transmission. Wheelbase, 96 inches; tread, 36; weight, 600 pounds. Two passengers, tandem.

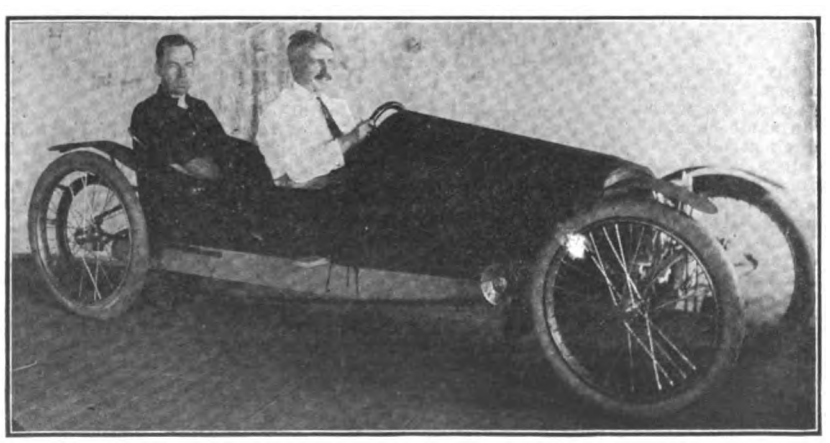
De Cross Cy Car—De Cross Cy Car Company, Cincinnati, O. Motor, two-cylinder, air-cooled, 9-12 horsepower. Magneto ignition. Friction transmission. No differential. Ash frame. Wire wheels. Tires, 28 by 2.75 inches. Tread, 36 inches; road clearance, 10 inches.

Fenton—Fenton Cycle Car Company, Fenton, Mich. Two passengers, side by side. Motor, De Luxe standard, rated at nine horsepower. Friction transmission, V belt, Cantilever spring suspension. Wire wheels. Wheelbase, 96 inches; tread, 36; weight, 500 pounds. Price, $375.

Economycar—Economycar Company, Indianapolis, Ind. Two passengers, tandem. Motor, two-cylinder motorcycle type, rated at 8-10 horsepower. Drive by silent chain and V belts. Wire wheels. Tires, 28 by three inches. Wheelbase, 106 inches; tread, 36; weight, 393 pounds. Price, $425.

Downing-Detroit—Downing-Detroit Cycle Car Company, Detroit. Two passengers, tandem. Motor, two-cylinder, air-cooled, V, 3.5-inch bore, 3.67-inch stroke, rated at 12 horsepower. Bosch magneto. Schebler carburetor. Two speeds forward and reverse. Semi-elliptic springs, front and rear. Tires, 28 by 2.75 inches. Wheelbase, 103 inches; tread, 56. Price, $450.

Imp—Imp Cycle Car Company, Auburn, Ind. Two passengers, tandem. Motor, two-cylinder, air-cooled, V, rated at 10 horsepower. Starts by crank from the seat, crank being inserted in the centre of the steering wheel. Friction transmission. Final drive by V belt. No axles; instead, two flat springs are set crosswise of the frame and fastened at the ends to yokes, between which the wheel spindle is fitted. Wire wheels. Tires, 28 by 2.5 inches. Wheelbase, 100 inches; tread, 36; ground clearance, eight inches; weight, 550 pounds. Price, $375.



The Imp, an Indiana Product, Which Starts from the Seat.

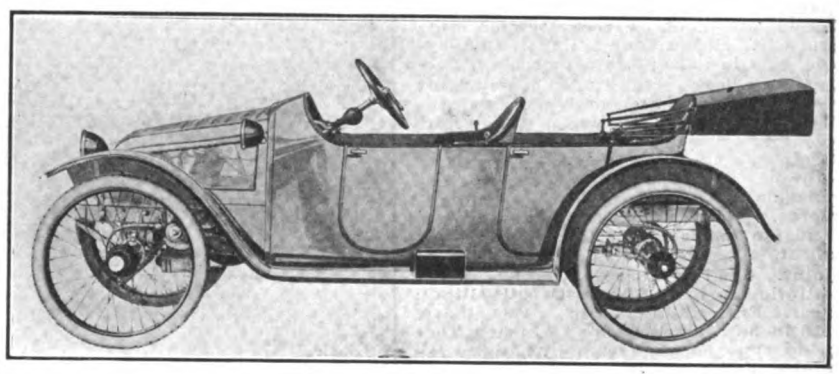
Falcon—Falcon Cyclecar Company, Cleveland, O. Two passengers, side by side. Motor, two-cylinder, air-cooled, rated at 10 horsepower. Friction transmission, drive by V belt. Semi-underslung suspension. Motor starts from seat. Automatic electric lighting and ignition system. Wheelbase, 96 inches; tread, 36; weight, 325 pounds. Price, $385.

Little Princess—Princess Cyclecar Company, Detroit. Two passengers, side by side. Motor, four-cylinder, four-cycle, air-cooled, L head, 2.75-inch bore, 3.675-inch stroke, rated at 12 horsepower. Bosch magneto. Holley carburetor. Engine starts from the dash. Planetary transmission. Wire wheels. Tires, 28 by three inches. Wheelbase, 86 inches; tread, 44; weight, about 600 pounds. Price, $400.

American—American Cyclecar Company, Bridgeport, Conn. Two passengers, side by side. Motor, four-cylinder, four-cycle, water-cooled, 2.875-inch bore, four-inch stroke. Wire wheels. Wheelbase, 80 inches; tread, 44. Equipment includes electric lights, windshield and top.

Woods Mobilette—Woods Mobilette Company, 1509 Michigan avenue, Chicago. Two passengers, tandem. Motor, four-cylinder, 14 horsepower. Friction transmission. Special spring suspension. Wire wheels. Tires, 28 by 2.25 inches. Wheelbase, 89 inches; tread, 30; maximum width, 35; height, 48; weight, about 450 pounds. Price, $350.

Twombly—Twombly Motors Company, 258 West 69th street, New York City. Models A and B. Model A motor, four-cylinder, water-cooled, bloc cylinders, 15 horsepower. Selective transmission, three speeds forward and reverse. Shaft drive. Wheelbase, 102 inches; tread, 38; road clearance, nine inches. Two passengers tandem. Model B motor, two-cylinder, air-cooled, Twombly, V type, rated at 10 horsepower. Cylinder ports are opened and closed by means of piston valves, a construction held to make for silent operation. Friction transmission. Final drive, side chains. Wire wheels. Tires, 28 by three inches. Wheelbase, 96 inches; tread, 38; road clearance, nine. Two passengers, tandem.



Woods Mobilette Tandem Design Is Made in Chicago.

Los Angeles—Los Angeles Cycle Car Company, 612 South Olive street, Los Angeles, Cal. Two passengers, side by side. Motor, two-cylinder, 3.375-inch bore, 3.875-inch stroke, rated at 10 horsepower. Friction transmission, V belts. Wire wheels. Tires, 28 by 2.75 or three inches. Wheelbase, 102 inches; tread, 44; weight, 450 pounds. Price, $395.

Voiturette—American Voiturette Company, Detroit. Two-passenger roadster, two-passenger tandem and four-passenger touring car. Motor, four-cylinder, 3.25-inch bore, 3.75-inch stroke, rated at 22.5 horsepower. Transmission, three speeds and reverse. Wire wheels. Tires, 30 by three inches. Wheelbase, 100 inches; tread, 44; weight, 820 pounds. Prices, roadster, $495; tandem, $510; touring car, $520.

Other Cyclecar Companies, which have not announced their product as yet, include: Blood Bros., Kalamazoo, Mich.; Autoette Company, Chrisman, Ill.; Carrette Manufacturing Company, 334 Monadnock building, Chicago, Ill.; Continental Engine & Manufacturing Company, Minneapolis, Minn.; Saxon Motor Car Company, 2609 East Jefferson avenue, Detroit; Zip Cyclecar Company, Davenport, Ia.

Staunton Automobile Livery & Transfer Company, Staunton, Va.; $25,000; president, N. C. Williams; secretary, T. M. Hoopes.

Stewart Transportation Company, Perth Amboy, N. J.; $2000; Walter K. Whitaker, Raymond S. Meyers and others.

Wilson Engineering Company, Buffalo, N. Y.; $20,000; C. G. Hulbert, W. F. Gagnon, W. H. Pfeiffer.

Motor Transportation Company, 62 South street, Morristown, N. J.; $20,000; to operate motor vehicles from Morristown to Madison; Edward P. Guerin, Jared T. Little and others.

Mutual Taxicab Company, Pittsburg, Penn.; $10,000; Antonio Floecker, C. E. Meyer, M. J. Dain.

Automobile Realization Company, Chicago, $90,000; to deal in automobiles and accessories; A. B. Johnston, G. B. Smith, G. F. Matthis.

Auto Salvage Company, Kansas City, Mo.; $12,000; Claude S. Peck, Bessie G. Peck, W. R. Chamberlain.

Tire Buyers, Guilford, Me.; $600,000; to manufacture and deal in tires; H. Hudson, J. H. Hudson.

Cleveland Motor Lamp & Radiator Company, Cleveland, O.; $10,000; to deal in motor car supplies; W. H.

Baker Electric Models in Perry Centennial Parade, Cleveland, O., Headed by First Machine Made, Driven by Oldest Employee of Company Costumed as Father Time.

Potsche Storage Battery Company, Chicago; $75,000; to deal in batteries, electric and automobile supplies, etc.; J. N. Lucas, A. S. Coon and others.

Edwardsville Garage & Auto Supply Company, Edwardsville, Ill.; $10,000; Thomas J. Fahnestock, Olin H. Giese, Walter Kriege.

Automobile Engine Tester Company, New York City; $25,000; to sell automobile engine testers, etc.; R. Corin and I. M. Cohen, New York City; S. Mirbach, Mt. Vernon, N. Y.

American Motor League, Philadelphia, Penn.; $100,000; to manufacture and deal in cars and accessories; E. M. Wilke, John Groetch and others.

Portland Auto Specialties Company, Portland, Me.; $5000; Frederick M. Smith, Anna T. Graham, Frank H. Purinton.

Premier Auto Novelty Manufacturing Company, New York City; $15,000; automobile accessories; Harry G. Kosch, Hyman Cohen, Charles Weiland; 194 Riverside drive.

Columb Tyres Import Company, New York City; $50,000; H. Ray Paige, A. C. Kahler; 1789 Broadway.

A. V. Specialty Company, Suffolk, Va.; to manufacture and sell Nurney auxiliary air valve; A. C. Nurney and others.

Bowling Green Rubber Company, Bowling Green, O.; $25,000; to manufacture tires; C. W. Greene, M. L. Cope, C. P. Cope, Loren Campbell, Mont Clouse.

UNCLASSIFIED.

Rio Grande Auto Company, Hidalgo, Tex.; $10,000; to operate auto livery business.

Glenbernie Transportation Company, New Bern, N. C.;

Montie, J. L. Balash, E. E. Kiesler, H. J. Monson, W. L. Ross.

Automatic Safety Signal Company, New York City; $25,000; to manufacture and deal in lamp appliances; H. Siegler, M. M. Becker, P. R. Feign.

Whiting Motor Car Company, Philadelphia, Penn.; $15,000.

Warm-Hand Steel Wheel Corporation, Poughkeepsie, N. Y.; $150,000; to manufacture steering wheels; G. E. Smith, W. S. Barton, J. C. Barton.

Spokane Motor Manufacturing Company, Spokane, Wash.; $50,000; E. A. Torrance, R. L. Dickerson and others.

Arthabaska Motor Car Company, Ltd., Victoriaville, Que.; $19,000; F. Bastien, J. O. Bastien, A. Quesnel, Jr., W. Bergeron, L. P. Crepear.

DeWitt Muffler Company, Wilmington, Del.; $30,000; to deal in parts; C. E. DeWitt, A. L. Downey, R. B. Rupert.

Auto Motor Car Company, Aberdeen, N. D.; $10,000; H. A. Page, Sr.; H. A. Page, Jr.; R. J. Cochran, W. A. Blue and others.

Sommerest Garage Company, Boston, Mass.; $15,000; J. J. Shea, L. L. Cambridge.

Zip Cyclecar Company, Davenport, Ia.; $25,000; R. W. Phelps, G. Decker French, F. W. Skinner.

Williams-Hasley Motor Car Company, Pittsburg, Penn.; $15,000; S. Hasley, S. A. Williams, W. G. Hasley.

Burns Automobile Exchange, New Orleans, La.; $10,000; general automobile business and to specialize in exchange of second hand cars; W. T. Burns, William H. Byrnes, Helen McGrath.

Taxicab Association, New York City; $50,000; to manufacture and deal in automobiles; L. H. Biglow, Jr., A. L. Loomis, A. Wichfeld.

Bond Automobile Company, St. Louis, Mo.; $10,000;

wholesale buying and selling automobiles, accessories and automobile repairing; Mark W. Bond, Caroline Bond, Charles Kist.

John J. Roche Company, Hartford, Conn.; $50,000; to deal in automobiles and supplies; John J. Roche, Carroll F. Roche, Henry W. Nichols.

Doughty Tire Company, Portland, Me.; $2,000,000; T. L. Croteau, Albert A. Richards, B. M. Maxwell.

Aurora Vulcan Company, Bridgeport, Conn.; $250,000; to manufacture automobile supplies.

Frankfort Motor Car Company, Frankfort, Ky.; $3000; T. P. Rogers, J. G. Rogers, O. C. Kenney, J. E. Manford, A. L. Manford, A. L. Bacon.

A. P. Mitchell Auto Company of Fort Worth, Fort Worth, Tex.; $15,000; F. L. Toepperwein, J. R. Walker, H. Roos.

Dimmer Company of America, Chicago, Ill.; $21,000; A. A. Pantelis, O. O. H. Weidner, John H. Lally.

C. & P. Kerosene Carburetor Company, New York City; $100,000; H. Anderson and others.

Buckeye Motor Trucking Company, Cleveland, O.; $10,000; F. E. Kulas, E. Powell and others.

AUTOMOBILE PATENTS GRANTED RECENTLY.

Pressure Gauge, Harutun B. Azadian, Syracuse, N. Y., assignor to Akabi R. Azadian of the same place. No. 1,072,415. Filed May 20, 1909.

Automobile Light Shifter, John G. Becker, Campbell, Mo. No. 1,072,418. Filed Jan. 30, 1913.

Float, Ernest D. Broderick, Detroit. No. 1,072,420. Filed Aug. 23, 1911.

Lubricant Retaining Means, Alexander T. Brown, assignor to the Brown-Lipe Gear Company, Syracuse, N. Y. No. 1,072,421. Filed Jan. 11, 1911.

Spring Wheel, William T. Crawford-Frost, Baltimore, Md. No. 1,072,433. Filed Oct. 2, 1911.

Control Lever, William C. Durant, Detroit, assignor to the Chevrolet Motor Company of the same place. No. 1,072,438. Filed April 4, 1912.

Tire Protector, Silas S. Huffman and Dur A. Huffman, Youngstown, O. No. 1,072,464. Filed March 13, 1913.

Wrench, Frederick Newell Martindale, Spraguesville, N. Y. No. 1,072,479. Filed Dec. 21, 1912.

Carburetor, George S. Pierson, Kalamazoo, Mich. No. 1,072,492. Filed July 28, 1913.

Vehicle Wheel, Charles Schwartz, Philadelphia. No. 1,072,515. Filed Oct. 5, 1912.

Device for Tire Chains, John A. Staples, Newburgh, N. Y. No. 1,072,522. Filed Oct. 5, 1912.

Electrical Measuring Instrument, Ray L. Triplett, Bluffton, O., assignor by mesne assignments to the Dillon Manufacturing Company of the same place. No. 1,072,531. Filed Nov. 28, 1910.

Wrench, Frederick Waldner, Alexandria, S. D. No. 1,072,535. Filed April 22, 1913.

Electric Battery, David H. Wilson, Chicago. No. 1,072,551. Filed Sept. 18, 1905.

Spark Plug Terminal Connector, Charles W. Beck, Rockville Centre, N. Y., assignor by mesne assignments to the Michigan Motor Specialties Company of the same place. No. 1,072,561. Filed Oct. 15, 1910.

Carburetor, Joseph Brautigam, Detroit, assignor by mesne assignments of one-half to Frank A. Rolf of the same place. No. 1,072,565. Filed July 5, 1912.

Valve Operating Mechanism, Herbert Benjamin Briggs, Tacoma, Wash. No. 1,072,566. Filed Oct. 28, 1911.

Anti-Skidding Device, Charles W. Cramer, Scranton, Penn. No. 1,072,579. Filed May 11, 1911.

Vehicle Spring Device, Robert L. Donlan, Seattle, Wash. No. 1,072,586. Filed March 7, 1912.

Heater for Radiators, William Gallagher, St. Louis, Mo. No. 1,072,595. Filed April 28, 1913.

Acetylene Welding Process, George C. Schemmel, Wapakoneta, O. No. 1,072,655. Filed July 29, 1912.

Nut Lock, Frank Smith, Quick, W. Va. No. 1,072,666. Filed Aug. 7, 1912.

Gas Engine Governor, Frank G. Burghoffer, Bellingham, Wash. No. 1,072,696. Filed Aug. 28, 1912.

Resilient Vehicle Tire, John T. Clark, Provo, Utah. No. 1,072,699. Filed Nov. 8, 1911.

Automobile Street Cleaner, David Gaul, Los Angeles, Cal. No. 1,072,713. Filed Feb. 23, 1912.

Carburetor, Robert W. Kaltenbach, Cleveland, O., assigner of one-half to Ernest J. Kaltenbach, Brooklyn, N. Y. No. 1,072,733. Filed May 31, 1912.

Two-Cycle Engine, Horatio H. Newman, Sandersville, Ga. No. 1,072,766. Filed Aug. 12, 1912.

Shock Absorber, Adolph Peteler, New York City. No. 1,072,770. Filed Feb. 20, 1912.

Gauge for Fuel Tanks, Philip M. Bush, Hartford, Conn., assignor to the Bush Manufacturing Company of the same place. No. 1,072,819. Filed Dec. 5, 1911.

Automatic Safety Brake, Lee G. Eggers, Mount Lebanon, Penn., assignor to Zeffie M. Eggers of the same place. No. 1,072,841. Filed Aug. 26, 1912.

Carburetor Mechanism, Milton L. Sammons, Kansas City, Mo. No. 1,072,875. Filed May 29, 1913.

Gauge for Fuel Tanks, Edward S. Savage, Rochester, N. Y. No. 1,072,876. Filed July 31, 1912.

Tire Support, Louis Cadwell, New York City. No. 1,072,909. Filed March 3, 1913.

Tire, Ora Dimmitt, Green Castle, Mo. No. 1,072,925. Filed Feb. 5, 1912.

Double Acting Wrench, Robert Owen, Jr., Shawnee, O. No. 1,072,980. Filed Feb. 3, 1913.

Vehicle Wheel, Jorge Guerrero, Paris, France. No. 1,073,040. Filed Dec. 26, 1911.

Automobile Heating Device, Frederick J. Moore, Brooklyn, N. Y., assignor of one-half to Philip Howard Reid, Sheepshead Bay, N. Y. No. 1,072,635. Filed March 20, 1913.

Spark Plug, Edwin C. Henn, Cleveland, O. No. 1,073,043. Filed Jan. 4, 1912.

Safety Crank, John O. Stanley, Holyoke, Mass. No. 1,073,058. Filed Sept. 28, 1912.

Motor Plow, Leslie S. Hackmey, St. Paul, Minn. No. 1,074,115. Filed Sept. 19, 1910.

Gaseous Fuel Mixer, Willis S. Parker, Philadelphia, Penn., assignor to Delomont E. Notley and Willis S. Parker, copartners, trading as the Parker Manufacturing Company of the same city. No. 1,074,136. Filed June 11, 1913.

Vehicle Spring, Lewis A. Huston, New York City. No. 1,074,178. Filed July 28, 1913.

Valve Seat, John Henry Mixer, Shale, Cal. No. 1,074,191. Filed June 20, 1912.

Hood of Motor Cars, Anton Aumuller, Munich, Germany. No. 1,074,232. Filed May 6, 1912.

Spring Wheel, Roddie C. Behrends, Easton, Ill. No. 1,074,235. Filed Jan. 2, 1912.

Lock for Automobiles, Albert Austin Bennett, Los Angeles, Cal. No. 1,074,238. Filed June 10, 1913.

Igniter, Edwin Charles Jones, Toronto, Ontario, Canada, assignor of one-half to James Pearson of the same city. No. 1,074,265. Filed March 25, 1913.

Spring Wheel, Samuel James Poyner, Pierson, Manitoba, Canada. No. 1,074,290. Filed Sept. 3, 1912.

Device for Stopping Engines, Tom Elmer Johnson, Northwood, Ia. No. 1,074,327. Filed Sept. 21, 1912.

Gearing for Motor Vehicles, Eugene Harold Avery, Bradgate, Ia. No. 1,074,341. Filed Oct. 19, 1911.

Automobile Horn, Ray H. Manson, Elyria, O., assignor to the Dean Electric Company of the same place. No. 1,074,371. Filed May 6, 1912.

Lap Robe, George Sullivan, New York City. No. 1,074,389. Filed May 19, 1911.

Magneto Ignition System, John M. Dinkins and Franklin B. Hayes, assignors of eight-fifteenths to William Taylor, all of Indianapolis, Ind. No. 1,074,416. Filed June 5, 1908.

Seat for Motorcycles, Frank G. Kimpel, Edgerton, O. No. 1,074,438. Filed May 20, 1913.

Lamp, Donald D. Myers, Lafayette, Ind., assignor to the Esterline Company, Indianapolis, Ind. No. 1,074,449. Filed April 21, 1913.

Self-Closing Funnel, Karl Heinrich Rosenauer, Frankfort-on-the-Main, Germany. No. 1,074,465. Filed March 18, 1911.

Clutch Construction, Powell Evans, Philadelphia, Penn. No. 1,074,500. Filed May 8, 1912.

Headlight Control, Harvey W. Potts, Longmont, Col. No. 1,074,527. Filed March 28, 1913.

Magneto, Carl Ebner, Stuttgart, Germany. No. 1,074,542. Filed March 9, 1910.

Carburetor, Edgar A. Riotte, Bronxville, N. Y., assignor to the Standard Motor Construction Company, Jersey City, N. J. No. 1,074,575. Filed Jan. 16, 1912.

Starting Valve Gear, Jean Romeyn, Brussels, Belgium. No. 1,073,633. Filed June 17, 1912.

Internal Combustion Engine, Paul S. Smith, Newburg, N. Y. No. 1,073,640. Filed April 22, 1909.

Internal Combustion Engine, William James Wright, Franklin, Penn., assignor to the Wright Engine Company, Pittsburg, Penn. No. 1,073,652. Filed March 5, 1912.

Combustion Engine, Guido Fornaco, Turin, Italy. No. 1,073,671. Filed Aug. 12, 1911.

Gasoline Tank, Leland F. Goodspeed, Milwaukee, Wis., assignor to the Milwaukee Locomotive Manufacturing Company of the same city. No. 1,073,676. Filed Feb. 17, 1912.

Primary Battery Cell, Julius H. Gugler and George W. Colles, Milwaukee, Wis., said Colles assignor to said Gugler. No. 1,074,677. Filed June 22, 1910.

Valve Guiding Tool, Herman, Bernard and Peter Horn, Washita County, Okla. No. 1,073,686. Filed Dec. 21, 1911.

Vehicle Wheel, John F. Mitchell, Topeka, Kan. No. 1,073,697. Filed Sept. 26, 1907.

Carburetor, Leonard Atwood, Boston. No. 1,074,727. Filed April 14, 1909.

Acetylene Gas Generator, Charles H. Long, Fairbury, Neb. No. 1,073,767. Filed Jan. 15, 1913.

Internal Combustion Engine, Luther O. Martin, Parkersburg, W. Va. No. 1,073,770. Filed Jan. 25, 1912.

Variable Speed Transmission Gearing, Joseph Michaud, Fort Kent, Me. No. 1,073,775. Filed June 14, 1912.

FOREIGN TRADE OPPORTUNITIES.

(Address Bureau of Foreign and Domestic Commerce, Washington, Giving Number, Which Will Forward Correspondence, Unless Otherwise Stated.)

11,637, Acetylene Gas Generators—In response to inquiries from the United States an American consul reports that many towns in the country in which he is located are without electric lights, and it may be possible to create a demand for acetylene lighting apparatus. He sends the names of two business men in his district with whom it might be advantageous for American firms to communicate. Correspondence with these men may be in English, but all pamphlets, price lists, descriptive matter, etc., to be of any value should be in Spanish.

11,640, Motor Power Agricultural Machinery—An American consul reports that a resident of his district wishes to get into communication with American manufacturers of complete outfits of motor power harvesting and agricultural machinery, such as motor engines, harvesters, thrashers, plows and harrows. He desires catalogues, with price lists f. o. b. New York City, or c. i. f. city of destination. Considerable machinery of this class is now being used in the country in question with very satisfactory results, but there is an opening for a large increase in the local sales, which ought to be taken advantage of. Correspondence should be in Spanish.

11,656, Copper Wire, Tubes and Sheets—A German distributor of metal wire, tubes and sheets informs an American consular officer that he is desirous of forming connections with American manufacturers of copper wire, tubes and copper sheets.

11,662, Motor Cars—A letter has been received by an American consul from a business man in India stating that he requires over a dozen commercial motor cars of 32 seats for passenger service and also some lorries (trucks) for transporting goods. He desires to be informed of the best makes of American cars, and also mentions that he would like to purchase such cars on the installment system. He states that he is prepared to give sufficient references, and corresponds in English.

11,682, Representation in Australia—A business firm in Australia informs an American consulate that it would like to get in touch with large American industrial concerns with a view to representing them in that country. The firm writes that the article is immaterial as long as it is well supported with samples, catalogues, detailed prices, freights, insurance rates, etc. However, it will undertake to handle the business of only such firms as are prepared to grant the sole agency for their products.

11,689, Automobile Tires—An American consulate has been requested by a foreign business man to place him in communication with American manufacturers of automobile tires. He desires to represent in Italy an American firm manufacturing rubber tires, with the object of importing and selling such goods on that market. He deals in automobiles, is in close touch with that trade, and states that he can find sales for pneumatic tires. Manufacturers are requested to quote terms, prices, conditions, discounts, etc., and correspondence should be in Italian or French.

11,696, Automobile Trucks—An American consular officer reports that he has been requested by a local business man to place him in communication with American firms manufacturing low priced automobile trucks. He desires to represent in Italy an American manufacturer of such trucks, particularly low priced cars, as he states there is a market for trucks costing not more than $1600. Correspondence should be in Italian or French. Prices, terms, conditions, discounts and catalogues are desired.

11,711, Catalogues of Motor Cars and Motor Boats—An American consul requests that manufacturers, especially those of motor cars and motor boats, file in his office as soon as possible their catalogues and price lists for 1914.

11,713, Motor Fire Truck—A report from an American consul in Canada states that a local board of fire commissioners has under consideration the purchase of a motor truck. It is proposed to purchase a machine that will be a combined steamer, chemical, hose and ladder truck.

11,720, Gasoline, Benzine, Automobiles and Mineral Oils—An American consul reports that a business man in Italy desires to be put in communication with American concerns handling gasoline and benzine who may be willing to ship direct. He states that he would be able to build up a considerable amount of business, and would take agencies for Sicily and southern Italy. In addition, he is interested in automobiles, motorcycles, accessories, mineral oils and greases. Offers may be sent direct or through the consulate in question.

11,734, Automobile Accessories—An American consular officer in Canada has forwarded the name of a well established firm which desires to receive from American manufacturers catalogues and price lists of automobile accessories.

11,739, Fire Apparatus—The American consular agent at Nelson, B. C., reports that the City of Nelson is considering the purchase of a motor hook and ladder truck for use in the fire department. Manufacturers of this equipment should communicate with the City Clerk, City of Nelson, British Columbia, Canada, for details regarding requirements.

11,768, Hardware, Motor Trucks, Etc.—A foreign firm informs an American consulate that it intends to push the sale of American goods throughout Europe, Asia Minor, Syria, Egypt and northern Africa. It desires representation on a commission basis of the following: Cheap motor trucks, hardware, plumbers' supplies, well drilling machinery, pipes and fittings, frogs and switches for tramcars and railroads, wire of all kinds, and tires for automobiles.

11,771, Motor Cars, Engines and Motorcycles—A report from an American consul in England states that a firm in his district would like to secure an agency for American motor cars. Another firm is open to take an agency for motor engines, motor boats and motorcycles.

11,782, Gasoline Engines, Etc.—An American consular officer in Canada forwards the name of a local firm which desires to enter into communication with American manufacturers and exporters of gasoline engines, copper paint, cordage of all kinds, gasoline, builders' supplies and cotton waste.

11,789, Motor Boats—A business man in Italy has requested an American consul to put him in touch with American manufacturers of motor boats. He desires to represent such a firm and import its boats into that country. Prices, terms, discounts, etc., are desired. Correspondence in Italian or French.

11,803, Self-Starting Apparatus for Automobiles—A well known and highly reputed firm of automobile agents in a German city informs an American consular officer that it desires to secure the representation in that country of a first class American self-starting device for automobiles, operated either by electricity or by compressed air.

11,810, Automobiles, Motor Boats and Electrical Supplies—An American consular officer in a Latin-American country reports that a resident of his district has just opened a new store for the handling of automobiles, motor boats and electrical supplies. He states that he also proposes to carry a full line of tools for carpenters, machinists, etc.

COMING EVENTS.

October.

Oct. 24—Convention, American Iron & Steel Institute, Chicago, Ill.
Oct. 27-28—Convention, Electric Vehicle Association of America, Chicago, Ill.

November.

Nov. 2-3—Road race, El Paso, Tex.-Phoenix, Ariz.
Nov. 3-8—Motorcycle show, Coliseum, Chicago, Ill.
Nov. 4-5—Road race, Los Angeles, Cal.-Phoenix, Ariz.
Nov. 4-5—Road race, San Diego, Cal.-Phoenix, Ariz.
Nov. 6—Track races, Phoenix, Ariz.
Nov. 8-12—Track races, Shreveport, La.
Nov. 7-15—Olympia Show, London, England.
Nov. 8-15—Show, Atlanta, Ga.
Nov. 22-29—Show, Providence, R. I.

December.

Dec. 1-3—Annual meeting, American Automobile Association, Richmond, Va.
Dec. 9-12—Convention, American Road Builders' Association, Philadelphia, Penn.
Dec. 10-12—Convention, Retail Implement & Vehicle Dealers' Association, Milwaukee, Wis.
Dec. 11-20—International exposition of safety and sanitation, American Museum of Safety, New York City.

January.

Jan. 2-10—Importers' Salon, Hotel Astor, New York City.
Jan. 3-10—Pleasure car show, Grand Central Palace, New York City.
Jan. 10-17—Show, Cleveland, O.
Jan. 24-31—Show, Rochester, N. Y.

ACCESSORIES, SUPPLIES AND FITTINGS.

(When Writing to Advertisers, Please Mention The Accessory and Garage Journal.)

Typhoon Horn.

The Typhoon Signal Company, Chicago, announces a new type of Typhoon electric horn known as type F, and although it is a popular priced signal, it is covered by a very liberal guarantee. It is constructed in two styles. One has a six-inch projector for mounting on the outside of the car, and this model is finished in three styles, namely: All black enamel, nickel and black enamel, and brass and black enamel. The other type is made expressly to be placed under the hood and is fitted with a long projector to project the sound. It is finished in all black. It is stated that short circuiting is prevented by utilizing a 7.5-inch flexible tubular connection for the wiring to the horn, and the construction eliminates the conventional use of terminals for attaching the leads from the battery. The signal is designed to be operated on any standard six-volt battery, and full length wire cable and push button are included in the equipment. The tone is said to be clear and penetrating, but not discordant. It sells for $4.00.

Shiller Cigarette Holder.

The Shiller Manufacturing Company, Chicago, is marketing a novelty termed the Shiller cigarette holder, which is a device that may be located in any desired position, either on the steering wheel or other convenient place on the car. The lower part of the holder is provided with a clamp for attaching to the steering wheel, for example, while the upper end clasps the cigarette.

J-M Spark Plug.

The H. W. Johns-Manville Company, New York City, is manufacturing a spark plug which carries with its sale a guarantee of 10,000 miles of service and the company states that any plug failing to give satisfaction will be replaced by a new one. One of the features of the J-M is the use of double insulation, it comprising mica and porcelain, the former being wound around the electrode. It is stated that the dual insulation, either of which is sufficient to insure perfect sparking, will withstand high voltages. The J-M spark plug is made in all sizes; is adapted to either battery or magneto currents, and sells for $1.00. The company issues a booklet on ignition which will be mailed upon request.

Pruden License Holder.

The laws of many states require that the car license be carried either in the machine or upon the person. When it is carried in the clothing and this changed, one is likely to forget to transfer it. The W. E. Pruden Hardware Company, 260 West 52nd street, New York City, is marketing the Pruden license holder, comprising a metal case so constructed as to retain the license and protect it from injury. The holder is fitted with a Corbin lock and an extra key is included. It sells for $3.00.

Rear Light Alarm.

The enforcement of the ordinances respecting the tail light has led to the marketing of a number of devices for notifying the driver when the lamp is extinguished and these are made both for electric and oil lamps. The Guaranteed Specialties Company, Kinney building, Newark, N. J., is manufacturing the rear light alarm, which is designed for electric lighting equipments, although the company states it produces an outfit to convert oil into electrical units, which permits use of its device. The rear light alarm comprises a compact, round, hard rubber box, containing an electro-magnet and a buzzer, the last named giving forth a strident sound when the filament of the tail lamp burns out or the circuit is broken. The box is provided with three terminals, one of which is connected directly to the battery, while the others are connected across the lamp terminals. A switch is also included. The device operates on a six-volt circuit and consumes practically no current as the buzzer may be cut out by the switch as soon as it sounds. The equipment comes packed in a neat box, and includes suitable length of wire, etc. Its selling price is $5.00.

Pioneer Batterymeter.

Motorists who pay attention to details realize the importance of giving the storage battery utilized with lighting and motor starting systems that care that is necessary for maximum efficiency. While the condition of the cells may be ascertained by the use of a voltmeter, makers of batteries recommend testing the specific gravity of the electrolyte, and for this purpose a hydrometer is used, an instrument permitting of fine readings not possible with the voltmeter. The Northwestern Chemical Company, Marietta, O., manufactures several types of instruments for this work and the Pioneer batterymeter No. 1 is shown in an accompanying illustration. It comprises a hydrometer enclosed in a sturdy glass tube and the electrolyte is drawn into the device by a rubber bulb. A suitable snout for inserting through the opening in the cells is also incorporated. The Pioneer batterymeter is nicely made and is guaranteed to be accurate in its readings. Its selling price is $3.50.

Ideal Automatic Hose Attachment.

There is no doubt that the water wasted in washing motor cars represents a large sum. Many owners and chauffeurs allow the water to run when cleaning the machine, by dropping the hose instead of shutting off the supply until again needed. The Gaylord Sanitary Manufacturing Company, Rochester, N. Y., is marketing the Ideal automatic water saver attachment, which is stated will earn its cost in 30 days where metered water is used. The device is secured to the conventional hose and is equipped with a lever which normally shuts off the supply when pressure is released. Being very compact and designed to fit the hand, it is a simple matter for the operator to compress the lever, which action allows the water to flow. A spray or jet nozzle is included, making it possible to vary the size of the stream and according to the character of the work. The Ideal comes in polished brass or nickel plated and sells for $2.00.

Avery Electric-Acetylene Burner.

P. C. Avery, president of the Acetylene Gas Company, Milwaukee, Wis., has brought out an auxiliary or emergency burner for electric lighting systems, permitting the use of acetylene in the event trouble is experienced with the lighting equipment. The new device comprises an acetylene burner, which may be fitted into the electric lamp socket by removing the bulb. The gas burner is connected to an auxiliary gas tank by a tube leading out through the front of the electric lamp. The glass cover is removed when the burner is in service, making it unnecessary to drill a special hole in the lamp as a lead for the tube. It is claimed that the flame will not blow out in the strongest wind. The device sells for 50 cents.

Mosler Silent Knight Plug.

Spark plug construction and location are being given more attention by engineers than formerly, and, coupled

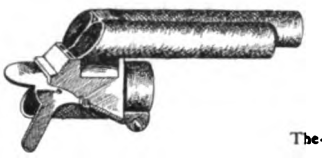
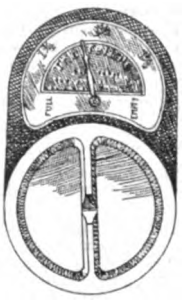
Blazer Horn





The-Tel-Tale Gasoline Gauge

with the high efficiency of the magneto, ignition troubles are reduced to a minimum. A. R. Mosler & Co., Mt. Vernon, N. Y., produces a large variety of spark plugs to meet the varying requirements of different motors and in an accompanying illustration is shown the Mosler Silent Knight plug, which embodies the well known Spitfire characteristic, namely, the protected central electrode. The plug is constructed to operate satisfactorily in splash of oil and to fire accurately under compression. It is constructed in metric sizes, platinum pointed, also in a 7/8-18 open end, two point type. Both are designed to withstand high voltages and the burning effect of magneto currents.

Hi-Po Spring Battery Connector.

Loose dry cell battery terminals are annoying and with ordinary members care must be exercised in tightening else the battery terminal will be broken. The Hi-Po Waterproof Battery Company, 1007 Atlantic avenue, Brooklyn, N. Y., is marketing the Hi-Po spring battery connector, which is stated to be self-locking. It is attached with the fingers, and it is also claimed that it will not jar or loosen in service. Another advantage pointed out in the design is that a perfect contact is obtained thereby increasing the efficiency of the cells. A feature of the terminal employed is that the wire may be secured without soldering, a patent tie making a perfect electrical connection. The construction and method of attachment to a cell is made clear in an accompanying illustration. They sell for $1.25 a hundred.

Utility Blow-Out Sleeve.

The Utility blow-out sleeve is produced in several forms by W. L. Johnson & Co., Endicott, N. Y. That illustrated is termed style D and is constructed from a one-piece heavy chrome split leather and is provided with an additional tread thoroughly studded. The last named feature prevents skidding. This type of sleeve does not require straps or laces, hooks fitting the rim. It is claimed that the sleeve cannot creep as it is held securely by inflating the tire. The leather is soft and pliable and is held to be water proof. The Utility blow-out sleeve is made in lengths varying from six to 12 inches and in sizes from three to five inches.

A. A. S. Fibre Tubing.

Hard vulcanized fibre tubing is employed for a large number of useful purposes, such as carrying the high-tension leads, wiring electric lighting systems, socket linings, bushings, etc. Being very tough and durable it can be forced in place without danger of breakage and it also may be machined and cut easily. The American Auto Supply Company, 1741 Broadway, New York City, and 1408 South Michigan avenue, Chicago, is marketing a hard vulcanized fibre tubing which comes in 24-inch lengths and has inside diameters of 1.125 and 1.5 inches. The thickness of the walls is .09375 inch. The net weight of each tube is 20 ounces. It sells for 48 and 60 cents respectively.

Blazer Horn.

The Motor Specialties Company, Waltham, Mass., is marketing a new exhaust operated horn, which is not only moderately priced, but may be attached easily and without alterations to the exhaust pipe or muffler. It is secured to the exhaust pipe by a special clamp and may be locked with a screw driver. The horn proper is stationary and one of its features is that the tubes extend toward the front of the car, insuring an efficient signal even when the motor is operating slowly. The gases are deflected to the tubes by a simple lid device which does not impede the egress of the gases, thereby eliminating opportunity of purring noises when the horn is not being utilized. The construction is simple and high grade throughout and the maker states that it will not clog. It is designed especially for model T Ford automobiles and sells for $3.75.

The-Tell-Tale Gasoline Gauge.

The Bundy-Goebel Manufacturing Company, Detroit, Mich., is producing an ingenious device for indicating the amount of gasoline in the fuel tank. The-Tell-Tale gauge is not only compact, but it is stated that it may be fitted to the fuel container in less than two minutes and that after installation requires no attention. One of the features of the device is that the tank may be filled without disturbing the gauge, a filler cap of neat appearance being provided. The gauge is oval, one section comprising a calibrated face, over which moves an indicating hand. As the gauge may be placed in plain view, as with a roadster type of car, the driver may ascertain the amount of fuel on hand from the seat by simply turning his head. The-Tell-Tale is constructed for various types and makes of machines, including roadsters, runabouts, touring, etc., and sells for $2.00.

Shino Mitten Duster.

The Pioneer Manufacturing Company, Cleveland, O., is marketing the Shino mitten duster, which is formed to fit the hand and to make easy the cleaning and polishing of the upholstery and body of the motor car. The duster is chemically prepared, and it is claimed that it will absorb all dust and that the texture of the material is so fine and soft that it will not scratch the finest of surfaces. It is also stated that crevices in the upholstery, where dust collects, are reached easily.

Radio-Escape.

The Radio-Escape, so named because it is designed to prevent evaporation of the fluids utilized in the radiator, is manufactured by the Globe Machine & Stamping Company, Cleveland, O. It is made in two styles, that illustrated being known as B, and is adapted to any type of radiator cap. It is fitted by tapping and drilling a hole and it is stated that the device is entirely automatic in its action. By its use it is claimed that evaporation is held to less than a quart for an entire season, and that it makes for economy when alcohol or other anti-freezing solutions, subject to evaporation, are employed. Type A is made for new cars.

Weld Extra Jet.

The Weld Manufacturing Company, North Chatham, Mass., announces the Weld extra jet, which is designed to make starting of the car easy in cold weather as well as to eliminate the trouble of priming the cylinders. The entire operation is controlled from the seat, a small, compact lever being utilized, which may be operated by the foot. The principle of the device is that of providing a rich mixture to the cylinders for starting and operation until the motor has become sufficiently warm to operate efficiently under the normal mixture. The Weld differs from the usual types of priming devices in that the fuel is completely vaporized, properly mixed with air and conveyed to the intake manifold in proximity to the cylinders, thereby eliminating opportunity for condensation or precipitation through long contact with the cold metal walls of the induction pipe. The extra jet takes gasoline from the float chamber of the carburetor, and, as the opening is above the fuel level of the float, leakage is not possible. The size of the extra jet is approximately .75 by 3.5 inches. Connection from the jet to the actuating handle is by means of a small brass chain. It is stated that it is attached without soldering, only two small holes being required for an .125 inch pipe. In addition to making for easy starting it is pointed out that the adjust-

Digitized by Google

ment of the carburetor will not require changing to enrich the mixture for cold weather starting. It sells for $5.00.

Liberty Bell.

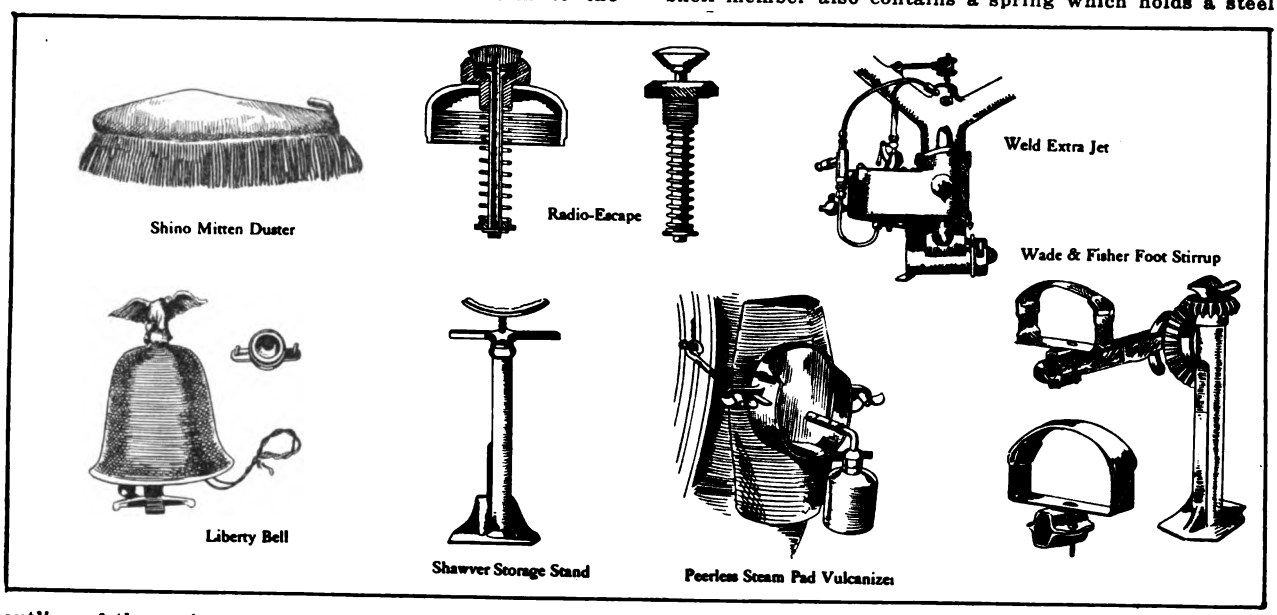
The Liberty bell, manufactured by the Liberty Bell Company, 346 The Arcade, Cleveland, O., differs from the usual electric signalling devices in that it is an actual bell having a tongue actuated on the current of four standard dry cells. It is five inches high, five across the base, and can be mounted on any convenient place on the car, and being surmounted by an eagle, presents an attractive appearance. The tone is said to be unusually pleasing and effective, being distinct but mellow. It is stated to be water, dust and fool proof and a suitable length of cord and switch accompany each signal. The construction of the bracket is such as to make for easy installation. It sells for $10.00.

Shawver Storage Stands.

The Shawver Company, Springfield, Mass., is manufacturing the Shawver storage stands, which are moderately priced and designed especially for service when the car is stored for the winter. They come in sets of four and are placed under each axle of the machine, relieving the tires of all weight. Each stand has a suitable, substantial base, and by means of a screw thread arrangement may be adjusted to various heights. It is not necessary to jack up the car as the stands are operated easily. The stands sell for $3.75 a set.

Peerless Steam Pad Vulcanizer.

The Peerless steam pad vulcanizer is produced by the Leader Manufacturing Company, 3049 West 25th street, Cleveland, O. Its face is concaved to conform to the outline of the casing and suitable side brackets are provided for the tension chain, which is secured by eye bolts locked with wing nuts. It is stated that it will vulcanize a patch on a tube or casing from a puncture to a patch nine square inches. It takes but two to five minutes' application of the hydrocarbon heater to generate sufficient heat to vulcanize thoroughly and a water pad automatically prevents burning either the patch or surrounding rubber. The equipment includes suitable material to make repairs to tubes and casings. Its selling price is $2.50.



Wade & Fisher Foot Stirrup.

Wade & Fisher, 3807 Lake avenue, Chicago, is introducing the Wade & Fisher foot stirrup attachment, which is a practical device and one designed to save considerable labor when a wheel must be jacked up to change a tire or for other work. It comprises a metal stirrup, shaped to conform to the foot and having a flexible band at the top. This band is utilized to prevent the foot from slipping when the handle of the jack, to which the device is clamped, is moved upward. The clamp is so constructed that it will fit any type jack handle and as the stirrup swivels it may be permanently attached. To operate, the foot is placed in the stirrup, enabling operation of the jack without stooping and soiling the clothing. It sells for $1.00.

Boyce Motometer Junior.

To obtain maximum efficiency from the motor the cooling water should not be allowed to boil, it being held that the best results are obtained when it attains a temperature of about 170 degrees Fahrenheit. When the motor overheats through a lack of water or oil, because of too rich a mixture, defective pump, etc., a loss of power follows and unless the trouble be remedied a large repair bill is likely to result. These conditions are not noted as a rule, until the car is stopped and an examination is made. The Motometer Company, Inc., 1790 Broadway, New York City, is marketing a Junior model of the Boyce Motometer, which is a neat, compact device for attachment to the radiator cap. It is fitted with a protected glass tube containing a red fluid which is actuated by the temperature of the water in the radiator. The dial of the Motometer is calibrated in degrees and lettered to denote the results obtained from varying temperatures, these including the maximum and minimum points, steaming and freezing, respectively. A small opening in the face of the dial permits of reading the device at night when the headlights are burning, as the red column is easily visible against the white background of the light. The Motometer is adapted to any type of radiator cap; comes finished in nickel or polished brass, and is moderately priced. Complete details of the device are set forth in a booklet which will be mailed on request. It sells for $5.00.

Apco Anti-Rattler No. 3.

The Auto Parts Company, Providence, R. I., announces a new Apco device termed the Anti-Rattler No. 3. It is one of the most practical accessories for model T Ford cars brought out by this concern, as by it play in the ball end of the steering arm and connections is eliminated and it is possible to make adjustments from time to time as needed. It replaces the usual steel cap on both ends of the steering gear connecting rod, which, when adjusted by filing the halves of the ball socket, usually result in the part binding when the wheels are turned. This is due to the difference between the worn, flat and round part of the ball. The Apco device consists of a bronze shell adjusted by means of a screw plug in the base, and with it, it is possible to eliminate all play. The shell member also contains a spring which holds a steel stud in contact with the ball, resulting in a cushioning effect, and thus in easier steering. The new device sells for $1.00. The company has also brought out a new brake lining for the service brake, a material in which all metal is eliminated. It is held by the Ford engineers that the use of a friction material containing any metal is largely responsible for magneto troubles, in that particles of the material affect the efficiency of the flywheel generator. The Apco lining is of special construction; comes in lengths to fit the brake drum and rivets are supplied with each length. It sells for 50 cents a foot.

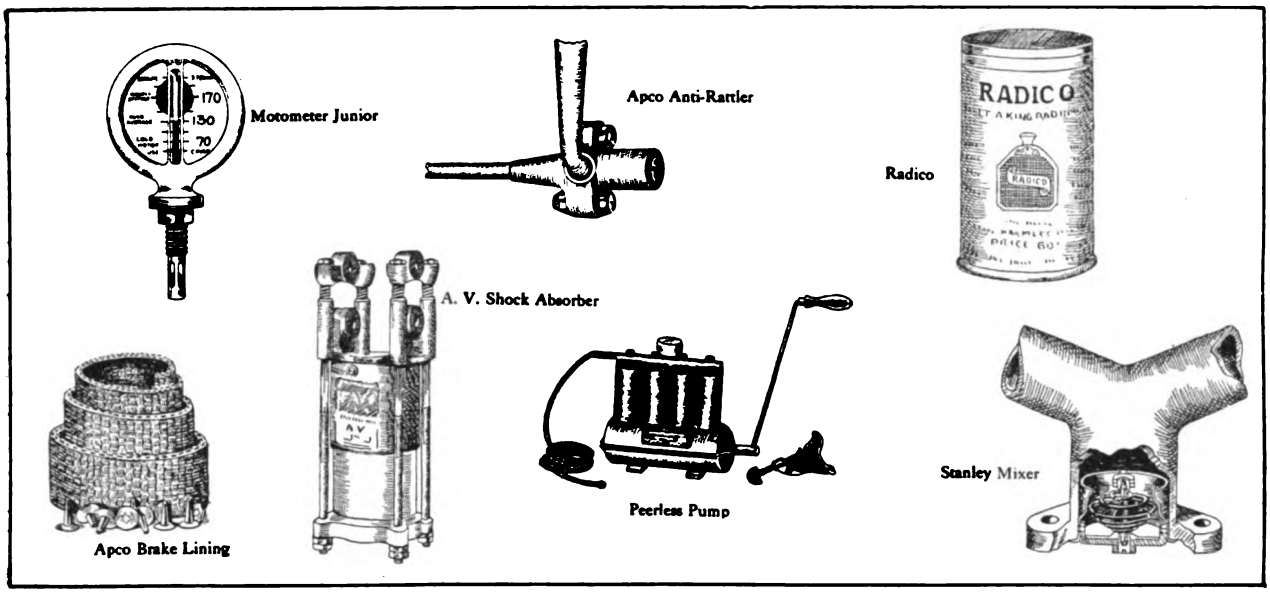
Radico.

Radico is a chemical preparation for repairing leaks in the radiator, and it is claimed by the maker, the Radico Manufacturing Company, Springfield, Mass., that the compound contains no acids or injurious minerals which would eventually corrode the metal and cause other leaks. It is also stated that a damaged cooler can be repaired in 15 minutes. The compound comes in a compact can and can be easily stored in the tool box. It sells for 60 cents.

A. V. Shock Absorber.

The A. V. shock absorber, marketed by the Hudson Export & Import Company, 140 West 42nd street, New York City, is an imported design operating on the hydropneumatic principle. A hydraulic device is utilized for the purpose of putting a load on the springs in order to prevent any bouncing effect, but this load comes into operation when the spring is compressed, not on the recoil. There are two springs, one taking the normal load, the second, which is not as long, coming into operation when the load becomes greater. The hydraulic device consists of a centrally situated cylinder in which works a small piston connected to the crosshead. Smaller holes are bored at intervals through the walls of this cylinder

Digitized by Google



and through these castor oil is forced on the down-stroke of the plunger. At the end of the down-stroke the level of the liquid rises above the top of the open ended cylinder, and the expansion of the springs, therefore, causes this oil to pass into the cylinder again, both through the small holes in the wall and also past the cup lever. The case containing the springs and forming the extension of the part upon which they rest at the base slides between the inner and outer tubes and thereby prevents any ingress of foreign elements to the working mechanism. An adjusting block is placed at the bottom, which allows the spring pad to be raised so as to place more pressure on the springs. The guides of the four slide bars are externally situated. A special form is made for use with the front springs, operating on the same principle, but the parts are arranged to replace the spring shackle in compression.

Peerless Pump.

The Peerless four-cylinder pump, produced by the Peerless Accessories Manufacturers, 1926 Wabash avenue, Chicago, is a small, compact unit, operated by a crank and designed to be clamped to the running board of the car. It requires but little effort to operate and it is stated that a large sized tire can be inflated to the maximum pressure in a very short time. Each equipment includes a clamp, suitable length of hose and a gauge. The hose connection automatically opens and closes the valve in the tire. The pump comes finished in black enamel with nickel trimmings. It weighs nine pounds. It sells for $15.00.

Polo Pneumatic Tire Alarm.

The importance of keeping the tires inflated to the proper pressure is well understood by the experienced motorist, but in the event of a small leak on the road the loss of air is not noticed until the car is stopped. The Polo Pneumatic Alarm Manufacturing Company, Clear Lake, S. D., is marketing a unique device termed the Polo pneumatic tire alarm, which comes in sets of four and is designed for attachment to the usual valve stem. When the pressure falls below a given point the alarm is sounded automatically, calling the attention of the driver to the shoe. The signal is said to be shrill and easily noted above the noises of the machine. The device is bored from solid brass, is very small and does not attract from the appearance of the car.

Pierce Speed Controller.

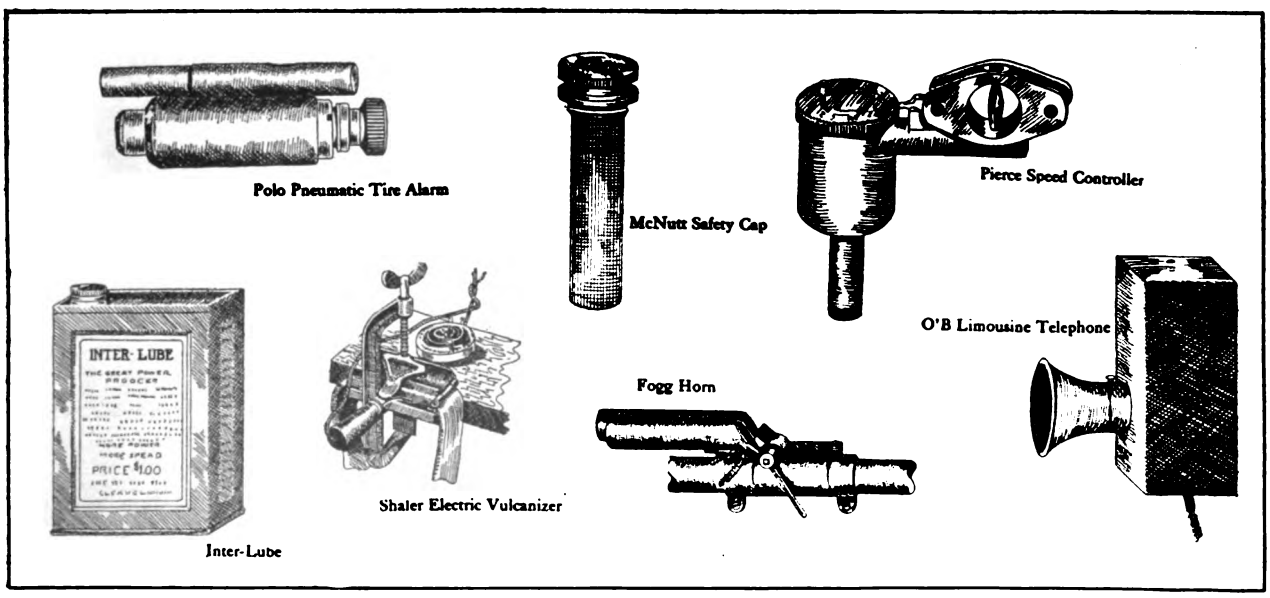
A form of governor, but differing from conventional practise in that it can be set for different speeds and locked, the owner retaining the key, is the Pierce speed controller, manufactured by the Pierce Speed Controller Company, Anderson, Ind. It is mounted between the carburetor and the intake manifold and regulates the supply of fuel by means of a butterfly valve. The last named component may be so set as to limit the vehicle speed as desired, a dial being incorporated for adjusting the mechanism and fitted with a lock. The device does not affect the speed of the engine until the set speed is exceeded. All parts are enclosed, so as to be dust, water and tamper proof. The price varies according to the finish.

O'B Limousine Telephone.

The Joseph F. O'Brien Manufacturing Company, 61 Park Place, New York City, is marketing a new limousine telephone which differs from usual construction in that a reply can be received from the chauffeur. The design of the receiver employed by the driver is made so as to be loud speaking in order that instructions may be heard in noisy traffic. The inside instrument comprises a receiver and transmitter in a unit, and a button is also incorporated for signalling the chauffeur. The system may be operated by dry cells or a storage battery and the instruments are very neat and compact, that utilized by the passenger being fitted with suitable length of flexible cord, retainer, etc.

Inter-Lube.

The Inter-Lube Chemical Company, 915 Schofield building, Cleveland, O., is marketing a liquid preparation called Inter-Lube, which is mixed with the gasoline in



Digitized by Google

the proportions of one teacupful to five gallons of fuel. It is stated that it will mix freely with the fuel without stirring, and is free from injurious chemicals and sediment. Several claims are made for the compound, among which are: Increase of mileage, more power, less lubricant required, no carbon and easier starting. A can is said to be sufficient for 50 gallons of gasoline, increasing the normal cost of the fuel about two cents a gallon. It sells for $1.00.

McNutt Safety Cap.

The McNutt Can Company, 352 Pearl street, New York City, maker of non-explosive cans and tank devices for handling and storing explosive liquids, is manufacturing the McNutt safety cap, which is a device adapted to fuel tanks on motor cars. It is in the form of a screw cap and incorporated in it is a check valve, preventing vapors from leaving the container, but permitting ingress of air as required to break the vacuum where a gravity system is employed. This check valve prevents evaporation of the fuel, as well as eliminating danger of explosion through fire. The valve member has a fusible disc which gives vent to the internal pressure when the container is subjected to fire, thereby preventing an explosion. It is stated that considerable economy is made possible through the use of the device, which is moderately priced. It sells for $2.00.

Shaler Electric Vulcanizer.

The C. A. Shaler Company, Waupun, Wis., is marketing a portable type of electric vulcanizer designed for service in the private or public garage, which may be operated on the lighting current, the outfit being constructed for direct or alternating currents and of different voltages. Plates are included for casings and tubes and a large variety of work may be performed with the equipment. The temperature is regulated by a rheostat, making the vulcanizer adaptable to all kinds of repairs, and the regulating device can be located away from the work bench, where it cannot be injured through accident. The company manufactures a wide variety of vulcanizing outfits and issues a booklet on the work, which will be mailed on request.

Fogg Horn.

The Motor Specialties Company, Cooper Lane, Waltham, Mass., is manufacturing a special exhaust operated horn designed especially for model T Ford cars, although it may be fitted to other types. It is a compact, well designed signalling device, simple in construction and being installed between the motor and the muffler its efficiency is not impaired by a leaky muffler. The signal proper is so arranged that the sound is thrown forward, insuring a volume of tone, even with the motor operating slowly. There are few moving parts, and no opportunity for back pressure or for clogging. It can be so installed that it does not interfere with the use of the usual cut-out.

Prest-o-Ceal.

Prest-o-Ceal is the product of the American Manufacturing & Distributing Company, Louisville, Ky., and is a thin paste holding in suspension the exact proportions of mineral solids and a fibre that will harden quickly. Enough of the liquid is injected into the inner tube to form a thin layer, and the material is spread evenly by the motion of the wheel.

NEW FORD MASTER VIBRATOR.

New York Coil Company Brings Out 1914 Model "T" Having a Number of New Features.

The new 1914 model "T" master vibrator for Ford cars, shown in an accompanying illustration, is manufactured by the New York Coil Company, 338 Pearl street, New York City, which concern has been building master vibrators for the past six years along with its well known line of ignition devices. It contains a number of new features and several departures in construction found in no other instrument of this type.

Instead of using hard rubber or wood, the deck is formed of a very soft quality of steel heavily nickel plated, upon which all of the working parts are secured. This construction entirely does away with the warping and changing of the parts relating to each other through dampness, heat or other causes. But one adjustment is provided, this being ratchet retained, and having an unusually long spring carrying the armature, the instrument cannot fail to produce strictly satisfactory results throughout the entire range of the adjustment screw. In reality the adjustment is provided only to compensate for the slight wear taking place at the contact points. The armature employs the hammer break principle, removing all possibility of the contact points sticking or fusing together.

New Ford Master Vibrator.

An original feature is the front plate, which is built integral with the coil, forming a substantial backing for the switch, and allowing the instrument to be utilized with dry cells or magneto. The size of the master vibrator complete is six by three by three inches. It is made with a very fine mahogany finished case and the maker states that it is unusually efficient when used in connection with electric lights. Easy starting of the motor is possible with the lights burning.

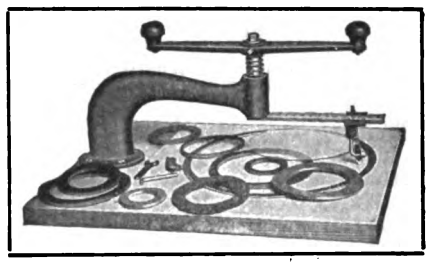
The instrument is sold with the express understanding that the purchase price will be refunded if not strictly as represented. Attractive and instructive literature will be sent all readers of the Accessory and Garage Journal upon request. The company maintains a western branch at 1429 Michigan avenue, Chicago.

SPRINGFIELD CIRCLE CUTTER.

Will Cut Accurately Glass, Sheet Copper, Gaskets, Washers, Etc., up to 14 Inches Diameter.

Cutting gaskets, washers, etc., by hand, not only requires considerable time, but frequently the material is wasted. The Shawver Manufacturing Company, Springfield, O., is marketing the Springfield circle cutter shown in an accompanying illustration, which is a device that will not only save labor and time in preparing gaskets, washers, etc., but these may be cut very accurately and in quick time.

The instrument is provided with a positive measuring scale by which the cutter proper may be set quickly to the size desired. The cutter will cut circles up to 14 inches in diameter and as the equipment includes a steel point glass cutting tool, knife for square edge work and one for bevel edge, a wide variety of work may be performed. Replacements of lamp glasses are possible with the cutter and sheet copper is also handled easily. The tool is constructed of high grade material throughout, comes with a wrench and weighs but 12 pounds. The manufacturer will supply additional details on request and has an interesting proposition for dealers, garages and service stations.



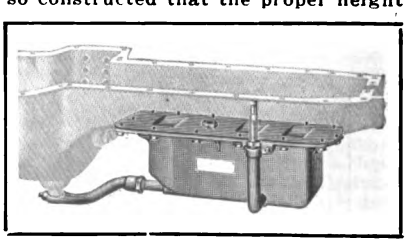
Springfield Circle Cutter.

OILER FOR FORD T MOTORS.

Denver Accessory Company Marketing Automatic Lubricator and Has Special Offer for the Trade.

The Danver Accessory Company, 18 Broadway, Pawtucket, R. I., is manufacturing the Danver automatic auxiliary oiler for model T Ford motors, which differs materially from oilers designed for this type of engine in that it is of the constant circulation type, assuring proper lubrication under all conditions of service and motor speed, and preventing an oversupply.

It replaces the usual lower crankcase, is of aluminum with bronze fittings and permits of carrying a larger supply of oil than with the regular system. Compartments are provided into which the connecting rods dip and these chambers are so constructed that the proper height of the oil is maintained at all times, irrespective of the supply in the base. The oil circulates constantly, thereby keeping it cool, and as the height of the lubricant is regulated there is no waste of oil, smoking or sooting of the plugs. The maker states that it will also prevent oil being thrown onto the spark plugs, short circuiting these members; that considerable more mileage is obtained, and that it is not necessary for the owner to carry an extra supply of lubricant on the car.



Danver Ford Oiler.

Digitized by Google

Each oiler is provided with well designed and constructed gauge having a tell tale, and this member being above the partition of the crankcase is easily read, etc. The Danver automatic auxiliary oiler can be fitted without any alteration of the crankcase and requires but a short time to install. The company is making a special offer to Ford dealers, agents, repair shops and garages, and the discounts are very liberal. Complete descriptive matter will be forwarded by addressing the Danver Accessory Company, 18 Broadway, Pawtucket, R. I.

ALLEN-FRICTION WRENCHES.

A High Grade Tool, Operating on the Friction Principle—Instant Grip One of Its Features.

The Allen Wrench & Tool Company, 4 Meadow street, Providence, R. I., is manufacturing the Allen-Friction socket wrench sets, equipped with the Allen-Friction wrench, which possesses a number of interesting and practical features. The wrench proper, which is patented in the United States and other countries, is an adaptation of the friction principle, has an instant grip and makes possible its operation in limited spaces. This feature is a valuable one in motor car work and the maker states that it will displace nuts and bolts where other types of wrenches fail.

The wrenches are made of a high carbon steel, drop forged, carefully machined, pack hardened and ground. The sockets accompanying each set are also constructed of high grade material. In addition, the company manufactures the Allen-Friction drill, which is utilized in connection with the wrench and this tool is especially adapted to automobiles, factories, machine shops, etc.

The growing demand for its product has compelled the company to remove to larger quarters, where additional machinery, etc., will enable the concern to double its output, which has been sold principally throughout the East and on the Pacific slope. The Allen Wrench & Tool Company is represented by M. A. Bryte of San Francisco, Cal.; in Europe, by Buck & Hickman, Ltd., London, England; in Paris, France, by Fenwick Freres & Co., and in Frankfurt, Germany, by F. G. Kretschmer & Co.

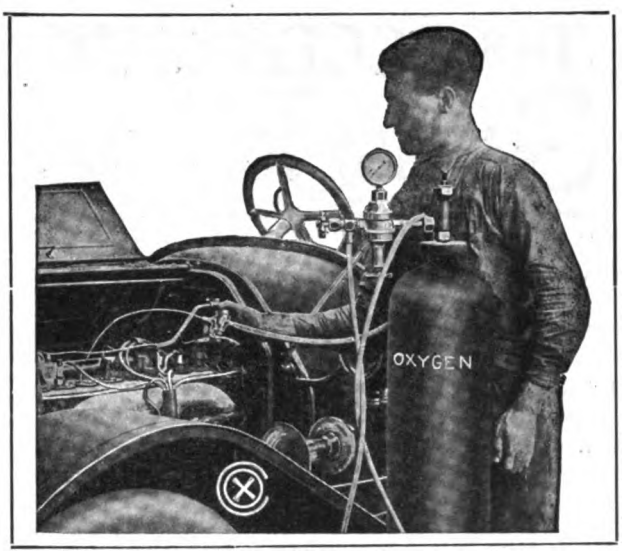
COX CARBON CLEANER.

Employs Oxygen and Consumes Carbon in Cylinders in Quick Time and at Slight Expense.

The old method of displacing the cylinders, when carbon must be removed, and scraping the deposits, involves considerable expense to the customer, to say nothing of delay in the time consumed in the operation. By using the latest process it is possible to increase the number of customers as well as to add to the profits of the garage, repair shop or service station.

The Cox Brass Manufacturing Company, Dudley avenue, Albany, N. Y., is marketing the Cox oxygen carbon cleaner equipment, shown in an accompanying illustration, and the method of operation is also outlined. The outfit includes a tank of oxygen, suitable length of hose, regulator, gauge, etc., and a flexible device for inserting in the spark plug opening. When the oxygen is brought into contact with the carbon and other deposits within the cylinder, these ingredients are entirely consumed and without injuring the metal. An advantage of the outfit is that carbon can be displaced from points a scraping tool will fail to reach.

It is stated by the maker that it requires from six to 10 minutes to clean a cylinder and at an average cost of 10 cents. The outfit is safe to handle and the tanks may be exchanged for new ones anywhere, the cost being slight. The company points out that a large number of motors may be cleaned daily, enabling the owner of the outfit to derive a handsome profit, and issues interesting data on the equipment, which will be forwarded on request. The selling price of the Cox Oxygen carbon cleaner is $25.



Showing Operation of Cox Oxygen Carbon Cleaner Outfit.

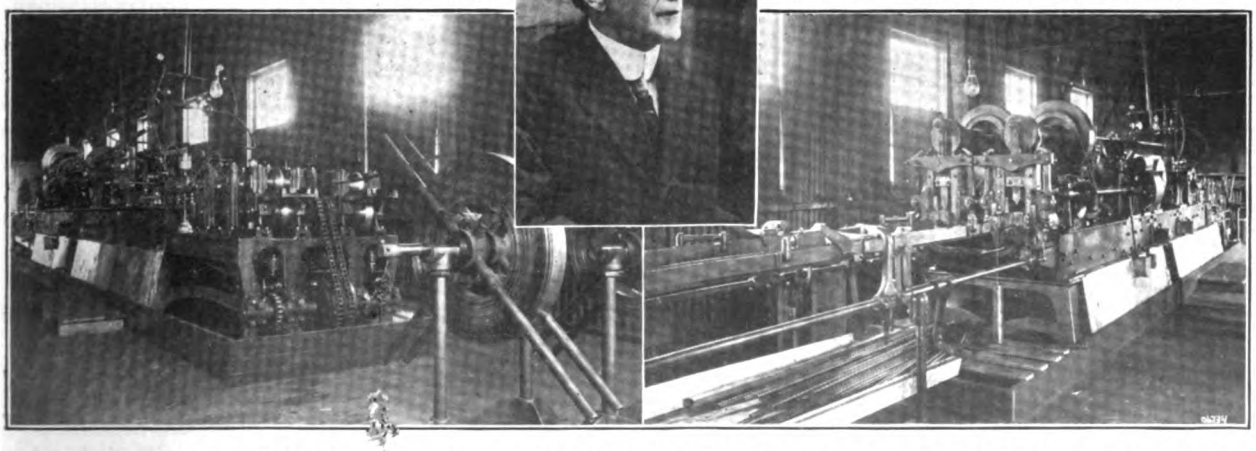
FOR PRODUCING STEEL TUBING.

Invention of Marshall B. Lloyd Expected to Have Decided Influence on This Branch of the Industry.

Representatives of seamless tube manufacturers met recently in Detroit to inspect a new machine for the production of seamless tubing. It is automatic in action and is the invention of Marshall B. Lloyd, president of the Lloyd Manufacturing Company, Menominee, Mich., who is more or less well known in the industry through his connection with the designing of woven wire fabric weaving machinery and other mechanical improvements.

The new machine is compact, occupying factory space three by 20 feet. It produces two tubes at once, being operated by two men. The hot or cold rolled steel is fed into it at one end and the tubing comes out at the other. Every step is automatic—forming, welding, straightening, sizing, polishing, drawing and cutting being performed without deterring the forward progress of the steel. It is claimed that it will turn out finished, polished tubing at the rate of 4000 feet a day, and in any size, weight, form or length desired.

The flat, metal strip is drawn through a series of small rollers which form it into the tube shape by a mandrel of peculiar construction on the inside. The tube emerges from these rollers in all appearances seamless, the edges being even and tight, and passes into a device that holds it in position to be welded, the edges being melted by the use of gases. The small, thin burr is removed by a knife, and the tube is smoothed by an emery wheel. It next passes into a large powerful vise, virtually an automatic bench, and is then sized and polished by cold rolling with water. The last operations which are performed are those of straightening and cutting.



Lloyd Automatic Seamless Tube Machine: At Left, Feeding the Flat Strip in at One End; at Right, Completed Tubing Emerging from the Other; Insert, the Inventor, Marshall B. Lloyd.

Advertising Copy for the ACCESSORY AND GARAGE JOURNAL requiring submission of proof must be received by 5th of month to insure publication in issue of the 15th of month.

Advertising Copy, proof not required, accepted to morning of the day before publishing day (unless such day is Sunday or holiday, when previous day is limit) of each publication.

Entered as second class matter Dec. 30, 1911, at the postoffice at Pawtucket, R. I., under the Act of March 3, 1879.

SELLING TALK VS. SYSTEM.

It appears to be quite the vogue on the part of a large number of general and trade magazines to supply those in the industry with so-called selling talks. Possibly, extensive office experience with newspapers and magazines qualifies a writer to advise dealers and garagemen with respect to the proper methods to be employed in disposing of cars and supplies. It may be that any man can revolutionize a dealer's business from an editorial chair, by the use of instruction books and half-formed opinions, with a few witticisms thrown in. But, from the writer's observation, men in the automobile industry are fully capable of acting as qualified salesmen.

The average dealer handles enough money each year to mean a big net profit, and, at certain times, the profit appears actually to exist on the books. However, for some reason, overhead selling expenses and maintenance charges eat up the apparent surplus. What is needed, therefore, are practical suggestions from men who have had actual experience, and such men invariably advise the adoption of some accounting system.

In order to inaugurate successful innovations in any department of the business, it is necessary to have full knowledge of all the conditions. The dealer may be depended upon to study his local field and to use all the diplomacy at his command. There is no broad highway to success, but rather, each man must analyze his own business, adopting and applying the system which shall best meet his needs. The object must be to detect the leaks that cause the profits to dwindle away, and effectually put a stop thereto.

STUDY ACCESSORY OFFERINGS.

While it is true that many car manufacturers have considered the comfort and convenience of the owner in including a large number of accessories and fittings heretofore regarded as extra equipment, there is still a respectable list of machines in use, some of them comparatively new, the owners of which it is possible to interest in refinements of this character. The garage or supply house which carefully watches the trend of the market will recognize the advisability of studying carefully the offerings in this field.

This advice applies quite as well to those who have been devoting their attention more exclusively to the repair shop, since many of the new devices are of such character that they can readily be made a source of considerable profit on the part of the repairman who exercises his latent business ability. In short, those in the trade would do well to give earnest consideration to all new lines of accessories and supplies which make their appearance.

POSSIBILITIES OF THE CYCLECAR.

If the interest thus far manifested in the cyclecar is any criterion upon which to base conclusions, then the new type of vehicle is to meet a ready market. There are several problems in connection with the production of these machines which must be worked out by engineers, and since designers have the benefit of the years of experiment which have resulted in the practical automobile, there seems to be no question that eventually these will be solved to the satisfaction of the public.

Dealers will be urged to make contracts with cyclecar manufacturers, and, like the producers, will be in no position to judge of the possibilities until opportunity has been had to test the machines in the hands of owners. At present, it would appear that the chief difficulty will lie in prevailing upon an eager buying public to await the necessary experimentation. That the cyclecar will prove a practical vehicle, in work for which it is intended, there seems to be no reason for doubting. The dealer has every reason for co-operating with the manufacturer to the end that when the new machine is ready for the market it may be in such condition as to warrant active exploitation.

REMOVING AND REPLACING BEARINGS.

MANY anti-friction bearings are damaged in the removal or during application when repairing mechanism in which they are mounted,

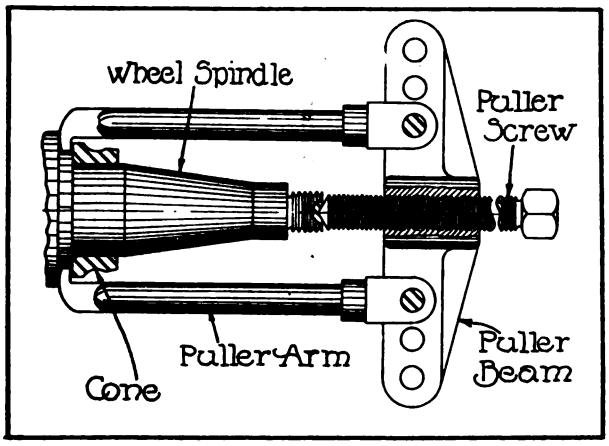

Fig. 1—Modified Form of Wheel Puller Having Two Arms and Cross Beam for Displacing a Bearing Cone.

but this results more from ignorance of their nature than deliberate intent to damage them, according to the New Departure Manufacturing Company in its ball bearing manual issued recently. A common cause of bearing failure is noted when they are driven in place by blows from an ordinary machinist's hammer applied directly to the bearing face or through the medium of a steel drift or blunt cold chisel. Ball bearings should never be driven in place or removed by the use of steel or other hard metal tools because the race members may be permanently sprung or deformed by this treatment.

Wherever the construction permits, bearings should be removed by direct application of pressure to the part that is tightly fitted. When a bearing is mounted in a wheel hub, as indicated at Fig. 2, a simple form of wheel puller can be employed to advantage. This is a substantial casting of malleable iron or bronze made approximately the same shape as the hub cap, threaded inside to fit the hub and having a substantial set screw at least .75 inch in diameter passing through the threaded boss at the centre. The screw should be long enough to pull the wheel and bearing entirely off the spindle or axle tube. A shouldered plug of steel with a depression drilled therein to locate the screw point may be pushed in the hollow tube to centralize the screw pressure. In use, the wheel puller casting or wheel is kept from turning and, as the screw advances, it pulls off the wheel and the bearing it contains.

A modified form of puller having two arms and a cross beam that can be used when a bearing cone must be removed from an axle or spindle is shown at Fig. 1. An attachment to permit it to remove a bearing of the unit type, such as a single or double-row angular, without exerting any pressure on the balls or outer race is clearly depicted at Fig. 3. This consists of a split casting adapted to be clamped loosely around the shaft back of the bearing inner race and any pressure exerted to remove the bearing is applied directly against the member which is a force fit on the shaft. When any form of hub or bearing puller fails to start the member to which it is applied by direct pull, its action may be accelerated after the screw has been tightened sufficiently to place the parts under a certain initial tension by a few sharp, well directed hammer blows on the beam or main body of the device. In all cases, where possible, the pressure applied to remove a bearing or part should be exerted directly against the portion that is a tight fit on the shaft or in the housing. In most cases it is the inner member of the bearing that is a force or press fit on the shaft; the outer member is usually a push fit in the housing and may be removed easily.

If it is necessary to force the bearing off with a series of blows, always use a brass or hard babbitt metal bar or drift, or even a piece of hard maple, hemlock or oak. Do not direct all the blows at any one point on the bearing as this tends to cramp it and will make it harder to drive off. Distribute them evenly around the entire circumference, always having successive blows at points diametrically opposite.

When driving bearings in place, it is always best to use some form of soft metal yoke member as shown at Fig. 4, or a tubular section piece as indicated at Fig. 5. With either the yoke or the other tubular form, the hammer blows are distributed evenly and the bearing is driven into place without injury to either the shaft or bearing components. When a double fork member is used, one end can be made to drive against the inner race member, while the other can be

addressing department D of the New Departure Manufacturing Company, Bristol, Conn.

DETERMINING STEEL.

A method of determining self-hardening steel from ordinary cast steel is to hold the metal against a high speed emery wheel. If the color of the spark given off be bright red, it can be taken for granted that the material being ground is cast steel. If it is a dull red, however, the steel is of the self-hardening brand, and the sparks made are very much like those given off from cast iron.

GRAPHITE AFTER VALVE GRINDING.

It is said that the use of dry graphite for finishing the work of valve grinding is decidedly beneficial as a fine surface is obtained on the seat and valve proper. The graphite is utilized after the grinding is completed and the seat and valve should be wiped dry before using the material.

CASE HARDENING HINT.

In case hardening, where the work must be uniformly hard all over, the usual treatment is satisfactory, but when only the wearing surfaces are to be hardened and other parts left soft for machining, etc., a different process will be required. Ordinary fire clay is sometimes used, but it tends to crack or peel during the heating, exposing some of the surface, which is not desired.

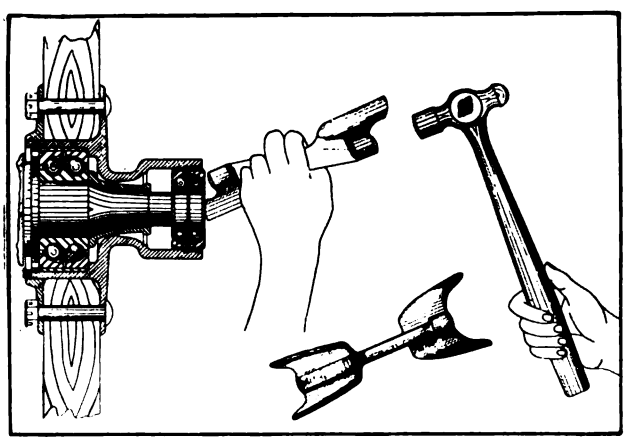

Fig. 4—Illustrating Proper Method of Driving Bearings in Place with Yoke Member of Soft Metal.

It is suggested by an experienced mechanic that a solution of copper be used on the parts desired to be left soft, in that less than one-hundredths of an inch in thickness of the copper will resist the action of any hardening compound. If plating vats are not convenient, a strong solution of sulphate of copper may be utilized.

SOFT METAL PUNCH.

In driving out shafts, etc., the ends are apt to become damaged even with the use of a copper or brass drift. The following suggestion for a drift is made by a repairman: Take a piece of weldless steel tube, 1.5 inches in diameter and nine long, and braze a wrought iron plug in one end. Next fill the tube with molten lead. It is said that it makes a most efficient punch as the lead is well supported, every blow of the hammer acts with telling effect and there is no rebound after the impact.

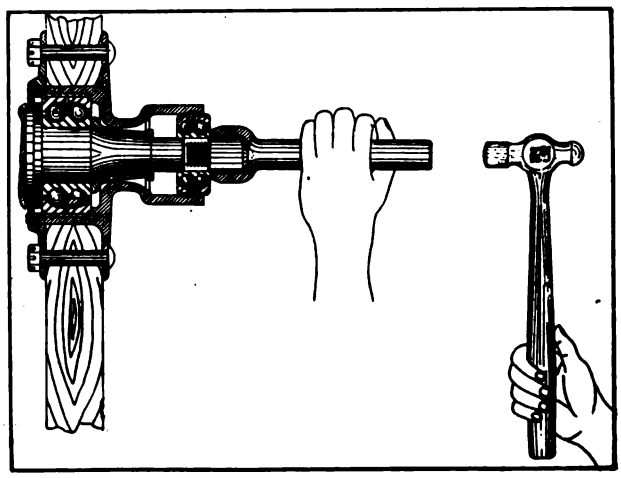

Fig. 5—Showing How the Blows of Hammer May Be Distributed Evenly with Tubular Tool.

SUGGESTS IODINE FOR CUTS.

Cut and bruised fingers are not uncommon, and owing to the dirt and oil working into these, they are difficult to heal. A repairman recommends the use of iodine instead of diluted carbolic acid, etc., stating that the former penetrates all lubricant and dirt, has a beneficial effect and causes the wound to heal more rapidly.

BUILDING UP BEARINGS.

The following suggestion is made by a workman, for adjusting the small ends of connecting rods where considerable play exists: Press the bushing out of position in the vise and sweat a layer of solder onto the outside surface. After pressing the part into position again it will be found to be smaller than before and the wristpin can be refitted.

HOW NEW TARIFF AFFECTS THE INDUSTRY.

THE new Underwood tariff bill, which was signed by President Wilson, Oct. 3, contains a number of rates which affect the automobile industry. The chief item of interest is found in the reduction of duty on automobiles valued at less than $2000, and on chassis and parts. A comprehensive list of the articles in which the industry is interested, with the old and new rates, follows:

	Old	New
Automobiles, value over $2000	45%	45%
Automobile bodies	45%	45%
Automobiles, value under $2000	45%	30%
Automobile chassis	45%	30%
Automobiles, finished parts	45%	30%
Motorcycles	45%	25%
Aeroplanes	45%	20%
Chromium metals	20-25%	15%
Iron, pig	$2.50 ton	free
spiegeleisen	$2.50 ton	free
scrap	$1.00 ton	free
ferromanganese	$2.50 ton	free
bar	6-10c lb.	5%
round rods	6-10c lb.	5%
Iron or steel, beams, etc	3-10c lb.	10%
sheets	5-10c lb.	12%
forgings	30%	12%
anti-friction balls and bearings	45%	35%
hoop, band or scroll	3-10c lb.	10%
Sheets, cold hammered	4-10c lb.	15%
sheets, galvanized	2-10c lb.	15%
pickled	2-10c lb.	15%
polished	1½c lb.	15%
sheets, cold rolled	2-10c lb.	15%
Steel, ingots		free
bars, Bessemer, etc	3-10c lb.	8%
bars, made by crucible, etc	3-10c lb.	15%
shavings	40%	20%
Iron and steel shot, grit and sand	1c lb.	30%
Wire (except gold and silver) covered	45%	20%
articles made of	40%	20%
Axles and parts of	45%	10%
Blacksmith's hammers, sledges, etc	1⅜c lb.	10%

Skins for morocco, finished	15%	free

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC.

Of The Accessory and Garage Journal, Published Monthly, at Pawtucket, Rhode Island, required by the act of August 24, 1912.

NOTE—This statement is to be made in duplicate, both copies to be delivered by the publisher to the postmaster, who will send one copy to the Third Assistant Postmaster General (Division of Classification), Washington, D. C., and retain the other in the files of the postoffice.

Name of	Postoffice Address
Editor, WILLIAM H. BLACK	Pawtucket, R. I.
Managing Editor, CARL A. FRENCH	Pawtucket, R. I.
Business Manager, WILLIAM H. BLACK	Pawtucket, R. I.
Publisher, The Automobile Journal Publishing Co.	Pawtucket, R. I.
WILLIAM H. & DAVID O. BLACK, JR.	Pawtucket, R. I.

Owners: (If a corporation, give names and addresses of stockholders holding 1 per cent. or more of total amount of stock.)
None.

Known bondholders, mortgagees and other security holders, holding 1 per cent. or more of total amount of bonds, mortgages or other securities:
None.

WILLIAM H. BLACK, Editor.

Sworn to and filed with Postmaster October 5, 1913.

ARTHUR H. CAPWELL, Notary Public.

ABSOLUTE TIRE PROTECTION
GIVEN ONLY BY THE
Hopewell Tire Case
It prevents any water entering the spare tire (either from rain or hose used in washing). Water rots the fabric and causes blowouts.
$3.00 to $4.00 according to size.
Hopewell Brothers, Newton, Mass.

A CATALOGUE OF AUTO SUPPLIES
will pay for itself in a few weeks through the extra profits it brings the Dealer. We furnish Jobbers and Dealers with these catalogues.
CATALOGUE SYSTEMS CO., FISHER BLDG., CHICAGO, ILL.

Digitized by Google

Here's Help When You Need It!

For the thorough overhauling at the garage, for the sudden emergencies which arise on the road, or for the week-end tinkering by the car owner, there is no one tool that will do as much as the

Starrett Ratchet Wrench

It will turn any standard nut or bolt in all sorts of difficult places;—places where the ordinary monkey wrench is useless. The ratchet permits rapid action with only a short arc swing. The extension reaches into otherwise inaccessible places. The drilling attachment furnished with the wrench takes any twist drill from 1-8 to 1-2 inch. A reversible screwdriver makes it handy for turning screws of various sizes.

The L. S. Starrett Co.,
World's Greatest Toolmakers
Athol - Mass.

This complete outfit sells for only $15.00. You'll find it a valuable outfit if you have a garage, and you can make profitable sales on it as a dealer. Write to us now for information, prices and catalog No. 20 G. T.

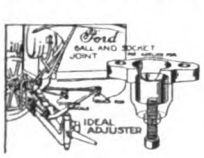
Equip Your FORD with IDEAL ADJUSTERS
BALL AND SOCKET JOINT

Easy to Install
Easy to Adjust
Made Especially for the FORD Car



Stop All Noise and Rattle
FORD Radius Rod and Steering Rod

The largest size is used for adjusting front end of radius rod, and enables you to take up at any time all lost motion on these parts, also eliminates the rattle and noise. All this is done by a turn of the setscrew which tightens the bearing on the inside.

The small size is used for adjusting the ball and socket joints on the steering gear connecting rod.

We guarantee all adjusters for the life of a car and they are so simple they can not work out of adjustment or need repair.

WILL FIT ANY FORD MODEL. Will give territory and special discount to dealers. **List Price, Large Size, $2.00; Small Size, $1.75.** If unable to purchase from your dealer, order direct. Manufactured by

JOHN A. VANSICKLE, 2122 East Washington St. INDIANAPOLIS, IND.

KING

A KING Owner Is Our Best Sales-Agent

Every time he drives his car or compares it with others of near price he is convinced anew, and convinces his friends, of the KING'S high value for

$1095 WITH EQUIPMENT

Famous Ward Leonard Starter and Generator $100 net additional

Rough Roads Smoothed Out

by the KING'S FLOATING CANTILEVER SPRINGS which are a modification of those used with such notable success by the Lanchester Motor Car Company of England. They are set at right angles to the direction taken by the resistance offered to road shocks. The arrows in the illustration show how this adjustment receives and throws back all jars. These springs make auxiliary shock-absorbing devices wholly unnecessary, give ample road clearance and freedom from "side swing," guarantee complete comfort to occupants, and assure a long, economical life to car and tires.

Repair Tires

BIG PROFIT— SMALL CAPITAL

MEN, tire repairing is a mighty profitable business. And it requires very little capital to buy complete equipment. You can get an Akron-Williams—the **BEST** made at $125.00 and up.

You have an unlimited field. 40 million dollars was spent this year for tire repairs.

With the big profits, you can pay for equipment the first year and make money besides.

Quality Means Success

Your success depends upon the quality of your work. Quality work depends on quality equipment. So you should equip with Akron-Williams. Then your success is assured.

Akron-Williams Best Made

The fact that these leading **Tire Makers** use Akron-Williams equipment, proves it is the **best.**

Akron-Williams equipment is used by Firestone, Goodyear, Diamond, Hartford, Republic, Pennsylvania, Revere, Consolidated, Empire, U. S., Hood, and many others—27 out of the 30 leaders.

Localized Heat

That's a big feature of Akron-Williams repair outfits. The three separate steam chambers give heat just where wanted—an exclusive, patented feature.

We Make Everything

used in tire repairing. And we make tire repair plants of any capacity.

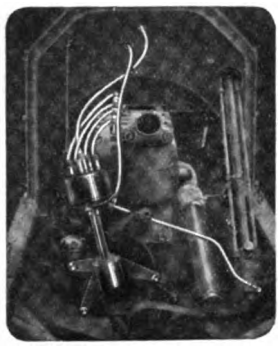
The Atwater Kent Ford Ignition



does more than eliminate the frequent and troublesome adjustment of the Ford coils.

The Atwater Kent Ignition assures perfect synchronization at all speeds, eliminating preignition and overheating—starts easily with a quarter turn of the crank and frequently without cranking by means of the starting button on the coil.

Effects a saving in gas, wear and vibration by enabling the motor to run slowly while the car is standing and run as smoothly "on high" at four miles an hour as at thirty or fifty.

The Atwater Kent will, in addition, wonderfully increase the power, speed, flexibility and hill-climbing ability of the Ford car, and gives superior results and costs less than half that of the high tension magneto.

It consists of the Unisparker or distributor elevated to a convenient and accessible position which takes the place of the Ford timer and a single non-vibrating coil is installed in place of the four vibrating coils.

It is easily installed by any one who can time a motor—no holes to bore—a screw driver and wrench are the only tools required.

Price complete with hand-operated switch $28.00—foot-operated switch $2.00 extra.

Write at once for Circular "L" and trade prices.

ATWATER KENT MFG. WORKS 4932 STENTON AVENUE PHILADELPHIA

Dixon's Graphite Transmission and Differential Grease No. 677

Flows with the gears at all temperatures and will not run off when the gears are stationary. The graphite coats the metal surfaces with a veneer that protects them from wear, and makes cool, quiet-running gears and bearings. "Lubricating the Motor," No. 49, explains more fully.

TEXACO
MOTOR OIL
THE TEXAS COMPANY

Advertising That Sells Oil

THE advertising that is done in behalf of Texaco Motor Oil sells Texaco Motor Oil. Every dealer who carries Texaco knows that.

There are two big reasons for the great success of this advertising campaign. First, the campaign itself was carefully planned, coherent, well rounded out, and has included the best motor oil advertisements ever written. Second, and most important, Texaco Motor Oil has made good, always, for every one who has ever used it

TEXACO
MOTOR OIL

meets successfully the severest tests to which it can be put. In cold weather or hot, in any type of motor, it always makes good.

The dealer who sells Texaco profits greatly by these two things, the quality of the oil and the manner in which it is advertised.

Every car owner is familiar with the Texaco Garage Sign. Thousands of them who swear by the oil watch for the sign and buy where they see it.

Is the Texaco Sign on your garage? If it is'nt you you are losing business that might be yours. Write and ask us why. Address:

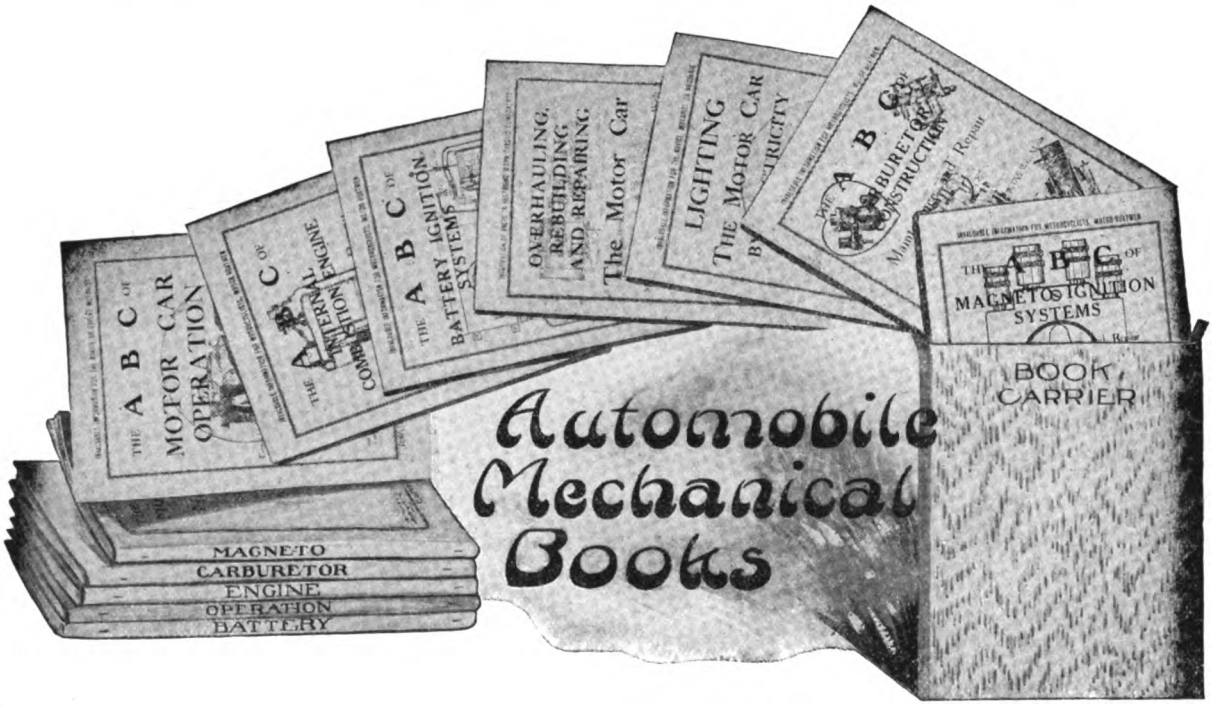
Knowledge Brings Position and Money

The ambitious man uses the knowledge acquired by others. He starts where they leave off. For a small amount—but a little more than a day's pay—you can purchase a lifetime of practical experience and knowledge of the best known authorities on Automobile Mechanical Subjects. Can Garagemen, Representative Dealers, Accessory Men or Mechanics employed by them afford to overlook this opportunity? You must have this knowledge and experience—you need it every day in your business. The call may be today for it—if not, it is sure to come tomorrow. With these books in your possession you can meet it.

10 Automobile Mechanical Books 10

ENGINE—MAGNETO—CARBURETOR—BATTERY—ELECTRIC LIGHTING—TIRES—CHASSIS —OPERATION—OVERHAULING, REBUILDING AND REPAIRING—THE MOTORCYCLE



A Library and Reference of Mechanical Information

800 Pages of Text—1500 Illustrations—Half a Million Copies Sold Annually.

Knowledge of cars means increased salary for all who have the ability to properly repair and adjust them. The practical instruction that you need is to be found in these books, and to acquire the same fund of information in any other manner would require years of constant study. You must understand all motors if you would adjust or repair them. The subject is fully treated in the Engine book. This applies as well to the Magneto, Carburetor, Battery, Lighting, Chassis and Tire books. When overhauling and rebuilding, read that discussion. The book on Motor Car Operation covers that subject with reference to all cars. No matter what the need, there is a book to meet it. No car or component is neglected, and all standard engines, magnetos, carburetors, batteries, lighting systems and vehicles are dealt with. The full set includes:

Engine	$ .35	Motor Car Tires	$ .25	Magneto	$ .35
Carburetor	.35	The Motor Car Chassis	.25	Motor Car Operation	.50
Lighting by Electricity	.50	Motorcycle Construction, Care and Repair	.35	Overhauling, Rebuilding and Repairing	.50
Battery	.35				

Full Set, 10 Books.....$3.75

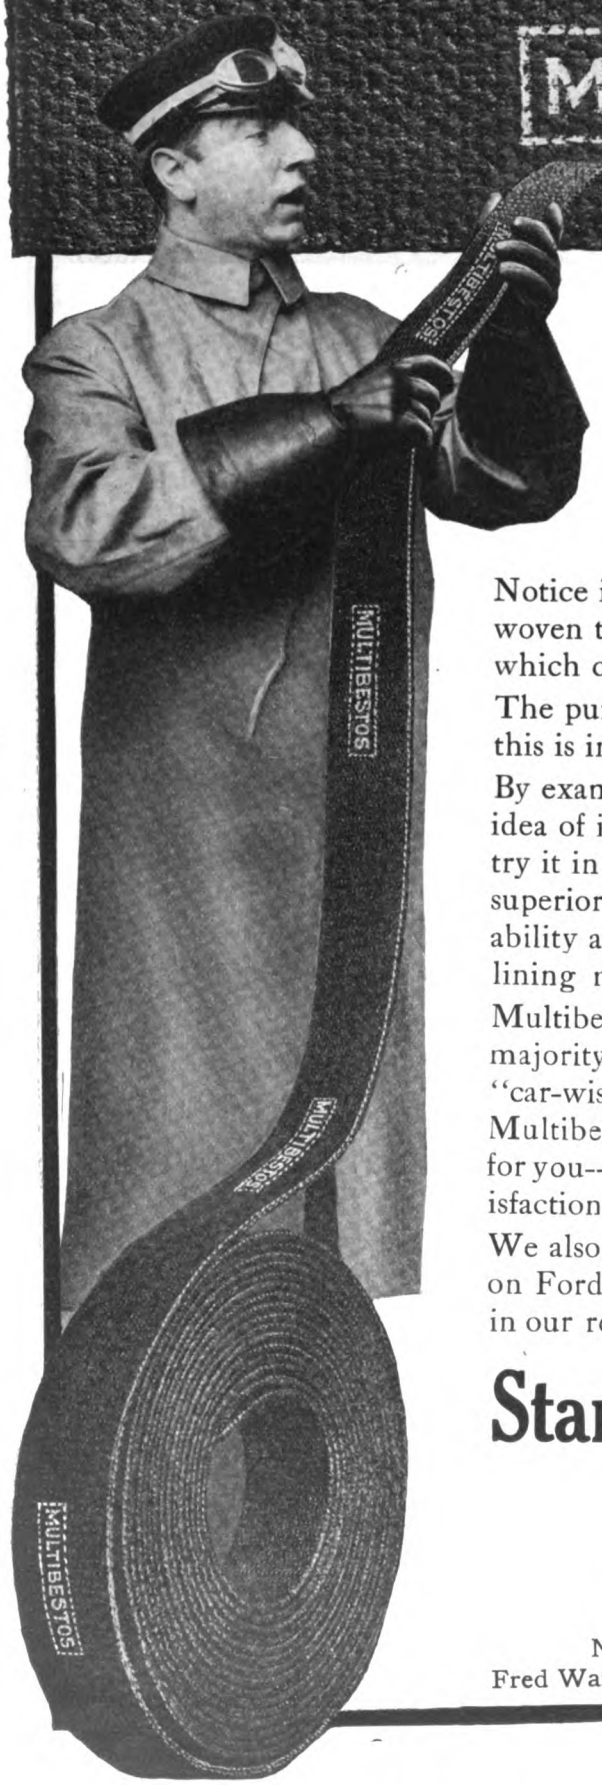
MULTIBESTOS



Examine The Weave OF Multibestos Brake Lining

Notice its firm texture and solid construction. It is multiple woven throughout and has no "stuffers", loose plies or layers which can pull apart and wear unevenly.

The purest of long fibre asbestos is used in Multibestos and this is interwoven with brass wires.

By examining its weave and general appearance you get some idea of its superior quality. When you take Multibestos and try it in actual service you get a more thorough idea of this superiority, for repeated tests have proved that in braking ability and all-around service it is superior to any other brake lining made.

Multibestos has been adopted as standard equipment on a majority of the leading cars and an increasing number of "car-wise" owners are coming to insist that nothing but Multibestos be used on their brakes. Surely it is the lining for you---the lining which will give the greatest service and satisfaction to your customers.

We also make a lining specially designed to meet conditions on Ford cars. If you are interested in this Ford Special or in our regular Multibestos we would be glad to hear from you.

THE ACCESSORY -AND- GARAGE JOURNAL

Devoted Exclusively to the Automobile Trade and Allied Interests

VOL. III. PAWTUCKET, R. I., NOVEMBER, 1913. No. 7.

THREE CAR CONCERNS CHANGE HANDS.

Edwards-Knight to Become Garford-Knight---Chicago Electric Removed to Toledo---Gerber Interests Buy Abbott-Detroit---Other News of the Industry.

THREE concerns in the industry, engaged in the production of pleasure cars, have changed hands within the past month. This means that in each instance the controlling stock has been purchased by new men, and in all but one case there will be a change in manufacturing plans as well.

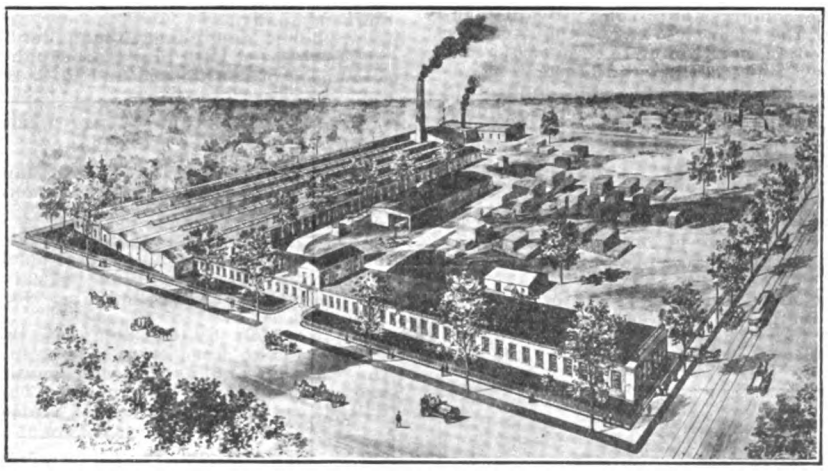
John N. Willys, president of the Willys-Overland Company, Toledo, O., and interested financially in a number of other concerns in the industry, has purchased the plant and all license rights, stock and equipment of the Edwards Motor Car Company, New York City, which was organized something like a year ago to produce the Edwards-Knight car. Mr. Willys states his intention of building the new cars, which will be known as the Garford-Knight, in the big and modernly equipped plant which he owns at Elyria, O. H. J. Edwards, designer of the Edwards-Knight automobile, will go to Elyria as chief engineer.

C. A. Neracher, formerly chief engineer for the Willys-Overland Company, has resigned to become one of the principal stockholders in the Carl Electric Vehicle Company, which has purchased the good will and machinery of the Chicago Electric Motor Car Company in Chicago, maker of Chicago electric pleasure cars. It is understood that a new plant will be opened in Toledo for the production of these machines and a business wagon under a new name.

Announcement is made from Detroit that the Edward F. Gerber Company, Pittsburg, Penn., heretofore well known in the industry as a distributor of cars in Western Pennsylvania, has purchased outright the plant and business of the Abbott Motor Company, Detroit, the sale having been ratified by about 90 per cent. of the stockholders. The name of the latter concern will not be changed and the production of Abbott-Detroit cars will be continued as heretofore.

CAMERON IN WEST HAVEN.

Oct. 24 marked the completion of the removal of the plant of the Cameron Manufacturing Company, maker of Cameron cars, from Beverly, Mass., to its new home in West Haven, Conn. The concern expects to have its full quota of men at work within 90 days, and it is anticipated that the new facilities will enable production of 1000 cars a year.



The New Plant of Cameron Manufacturing Company in West Haven, Conn.

The West Haven plant is that formerly utilized by the Mathushek Piano Company and comprises practically three buildings and six acres of land. The main structure, 420 by 120 feet, will be known as the assembling and machine department. Another at right angles to this, 325 by 60

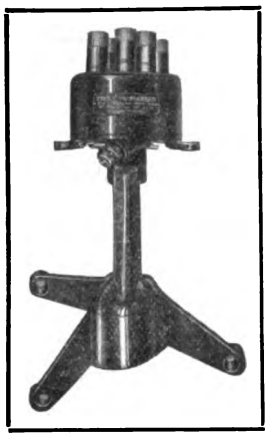
Digitized by Google

feet, will be utilized as the body building, painting and trimming department. The testing building is 150 by 50 feet. Completed cars will not undergo their road test on the public highways, but on a specially constructed track within the grounds.

ATWATER KENT FORD IGNITION.

Includes Unisparker or Distributor Replacing Usual Timer and Single Non-Vibrating Coil.

Perfect synchronization of the spark with multi-cylinder motors is an important factor in the maintenance of the car. With the spark of proper value and occurring at the predetermined instant in the cylinder, maximum efficiency may be expected from the power plant. On the other hand, lack of synchronization results in heating, loss of power, waste of fuel, etc.



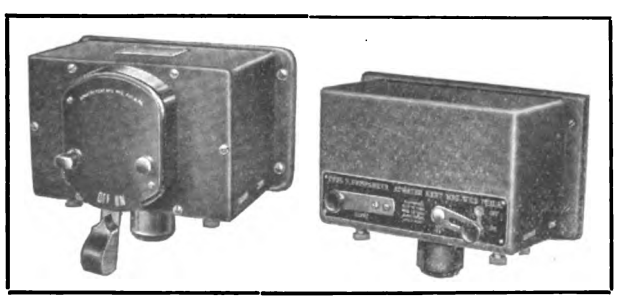
Atwater Kent Ford Unisparker.

The Atwater Kent Manufacturing Works, 4937 Stenton avenue, Wayne Junction, Philadelphia, has brought out an application of its well known Atwater Kent ignition system to the model T Ford motor. It consists of the Unisparker or distributor elevated to an accessible position by the brackets and gears shown in an accompanying illustration and taking the place of the usual Ford timer. A single non-vibrating coil is substituted for the regular coil, and a quality of the system is that when used with six ordinary dry cells or a six-volt battery, it will provide sufficient current for operating the car 2000 miles. This permits the Ford flywheel generator to be used solely for lighting purposes and it is obvious that better illumination at low motor speeds will be obtained, as the coil is not drawing any current.

The Atwater Kent ignition gives a single, quick, hot dynamic spark, irrespective of the speed of the engine, obtaining a rapid combustion of the gas and resulting in the greatest pressure upon the piston at the very beginning of the power stroke. As the spark is sufficiently hot at all engine speeds to ignite any mixture that will burn, the combustion of the gas is complete before the exhaust stroke takes place, thereby resulting in a cooler motor and preventing overheating of the cooling fluid.

The system is installed easily, the regular timer being removed with its wires. Its hexagonal nut is employed to retain the loose gear of the Atwater Kent system. The cylinder nearest the radiator is then placed on top dead centre of the compression stroke. By displacing three screws on the gearcase cover the Atwater Kent bracket is placed in position with the two gears in mesh and the screws replaced and tightened. An advance rod is supplied by the company for connecting the Unisparker to the usual operating linkage. Timing of the distributor is made possible by loosening the hexagonal nut retaining the loose gear and rotating the distributor shaft in the direction indicated by the arrow on the bracket housing until a click is heard. The nut is then tightened. The spark lever on the wheel is retarded about 1.5 inches from its maximum advance in order that additional retard may be obtained, as well as to permit of a wider range of advance as the speed of the motor increases.

After attaching the Atwater Kent coil to the dash the secondary wires are installed. This is accomplished by removing the cap of the Unisparker, which can be replaced in but one position owing to the small guide pins and slots. The cap is retained by steel springs at the base of the instrument and these are turned to displace it. The proper connections with the wires leading to the spark plugs are made by noting that the brass segment on the distributor block on the end of the shaft is directly opposite one of the brass distributor pins in the cap. It will denote the proper terminal for the No. 1 cylinder. The remaining members are wired according to the firing order which, in the case of the Ford, is 1, 2, 4, 3. The installation can be made by a garage man or the Ford owner, who knows how to time his motor, in about four hours' time. No machine work is necessary, the only tools required being a wrench and a screw driver. The system comes with a hand operated switch as shown or with a foot member, the latter being listed slightly extra.



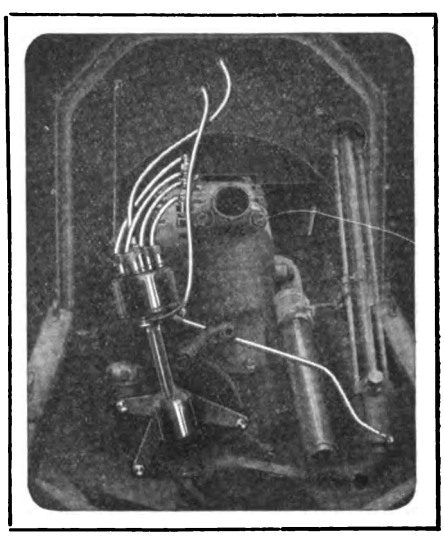
Foot and Hand Operated Switch Utilized with Atwater Kent Ford System of Ignition.

The Atwater Kent ignition is now entering its ninth season and has grown steadily in reputation and favor, being recognized as a standard of efficiency and simplicity among ignition devices. It has been adopted by a number of well known car manufacturers, as well as owners. It can be obtained direct from the company or at any jobber or dealer. The maker has an interesting proposition for dealers.

CHALMERS MEN IN SAXON COMPANY.

Concern Will Produce New Car to Sell at a Price in Competition with the Cyclecar.

The Saxon Motor Company, recently incorporated in Detroit, is composed of nine of the present officials of the Chalmers Motor Company of that city, and is to manufacture a car to sell for $395. This new machine will have a wheelbase of 96 inches and standard tread, and it is stated that it will not be in the cyclecar class though selling at a price which might be considered in competition with that type.



Showing Atwater Kent Ford Ignition System Installed.

The company is incorporated with a capital stock of $350,000, $100,000 of which is preferred and $250,000 common. W. H. Ford, secretary of the Chalmers company, is president and general manager, and other Chalmers men associated with him are: Hugh Chalmers, Lee Counselman, George Dunham and C. C. Hinkley.

REMOVES TO BUSH TERMINAL.

General and Sales Offices of Eisemann Magneto Company Now with the Factory.

The Eisemann Magneto Company, New York City, has moved its sales and general offices from 225-227 West 57th street to the building in which the factory is located, Bush Terminal building No. 8, 32 33rd street, Brooklyn, N. Y.

It was felt by the company that it was more advantageous to have these offices in closer relation with the factory, and as the old location was largely outgrown, the change was made. The New York address will be retained as a service station.

JOINS DETROIT ADVERTISING AGENCY.

Melvin J. Adams, Well Known in the Industry, Goes with Carl M. Green Company.

Melvin J. Adams, long associated with the newspaper and automobile advertising lines, has joined the force of the Carl M. Green Company at Detroit. The prominent position in the automobile advertising field that the Green company has won through handling of the accounts of the Chalmers, General Motors, Detroit electric and others, should be materially increased and the efficiency improved by the acquisition of Mr. Adams.

TRADE INFORMATION EXCHANGE.

The Following Requests for Information, Presented by Members of the Trade Information Exchange, Offer Opportunities for Agents to Secure New Lines, for Manufacturers to Extend Their Representation and for Producers to Get in Touch with Those Who Are in the Market for Equipment and Supplies. They Are Published Without Name or Address, Those Interested Desiring the Negotiations to Be Strictly Confidential. Replies Should Be Addressed by the Number Given and Sent to the Exchange with Postage for Forwarding.

Through the Trade Information Exchange, The Accessory and Garage Journal is in a position to supply at request a number of the best pleasure car and power wagon agency propositions that can be secured. These agency openings are for machines of all kinds, makes and prices. When writing, state preference, prices and full details concerning that which is desired. All correspondence will be treated as confidential. No charge will be made for the service rendered.

PLEASURE CAR AGENCIES WANTED.

9377—Minnesota Concern, recently organized, is interested in securing agency for pleasure cars selling from $600 to $1500.

9384—New Hampshire Company, now agent for two lines, is willing to add pleasure cars selling from $950 to $4000.

9398—Ohio Agency is in the field to handle pleasure cars selling from $950 to $2250.

9396—Iowa Company, with territory in eastern part of state, will take agency for pleasure cars selling from $800 to $2500.

9380—Connecticut Concern, controlled by new interests, is in the field for an agency for pleasure cars selling at $400 to $750.

9383—Iowa Concern, now handling one line, is interested in securing agency for pleasure cars selling from $700 to $1500.

9393—Maryland Agency is interested in pleasure car lines selling from $950 to $5000.

9385—New York Concern, with new quarters, will take agency for pleasure cars selling between $2000 and $4000.

9392—Texas Company will take agency for pleasure cars selling from $750 to $1250.

9388—Mississippi Company is interested in securing the agency for pleasure cars selling at $600 to $1900.

9395—New York Concern, with territory in three counties, is willing to take agency for pleasure cars selling from $900 to $1300.

9390—Maryland Company, now agent for one line, is interested in adding pleasure cars selling from $300 to $600.

9397—Iowa House will take agency for pleasure cars selling from $990 to $2690.

9391—Massachusetts Garage is interested in securing agency for cars selling from $475 to $600.

9387—New York Company, now representing parts manufacturers, is interested in a pleasure car proposition. No price limitation is mentioned.

9382—Texas Garage, recently incorporated, will take agency for pleasure cars selling from $550 to $3500.

9379—New Jersey Corporation, recently established, wants agency for pleasure cars selling at $950 to $4000.

9378—Massachusetts Company, under new management, is willing to take agency for pleasure cars selling between $500 and $1500.

9381—Iowa House, established in new quarters, is interested in securing agency for pleasure cars selling from $750 to $2150.

9386—Mississippi Agency is willing to add pleasure cars selling from $500 to $2500.

9600—Illinois Company is interested in securing agency for pleasure cars selling from $400 to $1000.

9654—New York Company is in the field for an agency for pleasure cars selling from $1000 to $2500.

9636—Minnesota House, now agent for one line, is willing to take agency for other pleasure cars selling between $300 and $800.

9625—Mississippi Concern is interested in securing agency for pleasure cars selling from $750 to $2300.

9623—Wisconsin House, now agent for trucks, is in the field for pleasure cars selling from $950 to $2000.

9673—Texas Company will take agency for pleasure cars selling from $550 to $5000.

9648—Ohio Concern is in the field to secure agency for pleasure cars selling from $900 to $2500.

9686—South Dakota House is interested in securing agency for pleasure cars selling from $450 to $950.

COMMERCIAL CAR AGENCIES WANTED.

5284—Pennsylvania Company is willing to take agency for motor trucks. Selling prices not stated.

5292—Florida Company will take agency for power wagons selling from $500 to $1500.

5295—Iowa Concern is interested in securing agency for motor business wagons selling from $500 to $2000.

5281—New Hampshire Company is interested in securing agency for motor trucks selling from $950 to $4500.

5289—Maryland House is willing to take agency for power wagons selling at about $500.

5283—New Jersey House, recently incorporated, would represent motor trucks selling from $950 to $5000.

5293—Iowa Company is in the field for an agency for motor trucks selling from $1250 to $4000.

5287—Mississippi Company will take agency for power wagons selling from $600 to $3500.

5290—Texas House, now handling one truck, will add power wagons selling at $500 to $2000.

5285—New York Concern is willing to take agency for motor trucks selling from $500 to $4000.

5288—Maryland Company, now agent for pleasure cars, is interested in securing agency for power wagons selling from $700 to $1500.

5294—Ohio House will take agency for motor trucks selling from $1250 to $2000.

5286—New York Company will take agency for motor trucks at all prices.

5291—Maryland Concern will take agency for power wagons selling around $1250.

5337—Washington Company, recently organized, is interested in securing agency for power wagons selling from $800 to $1500.

5346—Illinois House, now handling pleasure cars, is in the field for agency for motor trucks selling from $1000 to $1500.

5375—Texas Company is willing to take the agency for commercial vehicles selling from $1000 to $5000.

5364—Wisconsin Company would like to take agency for motor trucks selling from $500 to $3500.

5357—Mississippi House, long established, is interested in an agency for motor trucks selling at $2000.

ACCESSORY AGENCIES WANTED.

7398—Maryland House wishes to secure agency for automobile equipment, accessories and supplies.

7380—Massachusetts Company wishes to secure agency for general line of accessories and supplies for automobiles.

7406—Pennsylvania Concern is interested in securing agency for equipment, accessories and supplies for automobiles.

7406—Iowa House is in the field to handle power wagon and pleasure car equipment, accessories and supplies.

7384—Connecticut Company wishes to secure agency for automobile accessories and supplies.

7387—Iowa Concern will take agency for all kinds of automobile accessories and supplies.

7395—Maryland House is in the field for a full line of equipment, accessories and supplies for automobiles and power wagons.

7408—Ohio Company is willing to take agency for automobile equipment, accessories and supplies.

7386—Texas Concern is interested in securing agency for automobile supplies and accessories.

7379—Minnesota Company will take agency for automobile equipment, accessories and supplies.

7406—New York House, with three counties open, will take agency for automobile accessories, supplies and equipment.

7389—New Hampshire Garage, with one county open, is willing to take agency for all kinds of accessories, supplies and equipment for automobiles and power wagons.

7383—Massachusetts Company will take agency for automobile accessories and supplies.

7399—Florida House is open for an agency proposition in automobile equipment and accessories.

7382—Pennsylvania Concern would like to secure agency for accessories, supplies and equipment for automobiles.

7390—New York Company will take agency for automobile and power wagon equipment, accessories and supplies.

7410—California House is in the field to handle automobile supplies and accessories.

7405—Michigan Concern is willing to take agency for automobile equipment, accessories and supplies.

7385—Iowa Company is interested in securing agency for supplies, equipment and accessories for automobiles.

Digitized by Google

7391—Mississippi Concern wants agency for all kinds of automobile accessories and supplies.

7401—Illinois House will take agency for automobile supplies, equipment and accessories and for power wagon supplies.

7392—Nebraska Company is in the field to handle supplies, equipment and accessories for automobiles and motor trucks.

7396—South Carolina Store, recently started, will take agency for automobile equipment, supplies and accessories.

7402—Iowa House will take agency for automobile supplies, equipment and accessories.

7381—New Jersey Company will take agency for automobile and power wagon supplies, equipment and accessories.

7404—New Jersey House wants agency for automobile supplies.

7388—New York House desires agency for supplies, accessories and equipment for automobiles.

7521—Indiana Company is very much interested in securing agency for supplies for automobiles.

7530—Utah House is interested in taking agency for supplies, accessories and automobile equipment.

7565—Illinois House wishes to secure agency for all kinds of equipment and supplies for automobiles.

7587—South Dakota House, recently incorporated, is in the field to take agency for automobile supplies and equipment.

7561—Washington Concern, with county territory open, wants to secure agency for accessories for automobiles and cyclecars.

7547—Ohio House, now under new management, is in the field to secure agency for supplies and accessories.

GARAGE EQUIPMENT WANTED.

8400—Ohio Concern wishes to secure garage equipment and supplies.

8393—New York House is interested in securing garage supplies.

8384—Texas Company is in the field for garage supplies.

8390—Mississippi House is open for garage supplies and equipment.

8401—Ohio Company wants to secure supplies and equipment for garage.

8382—Connecticut Company is interested in supplies for garage.

8380—New Jersey Concern is open for garage supplies and equipment.

8396—Iowa Company wants to secure supplies and equipment for garage.

8399—Pennsylvania Company, newly formed, is ready for garage equipment and supplies.

8386—New Hampshire Garage wants to secure garage supplies and equipment.

8423—California Company is in the field for garage equipment and supplies.

8436—Utah House is open for supplies and equipment for garage.

8445—Iowa Concern wants garage supplies and equipment.

8454—California Garage is inquiring for supplies and equipment for garage.

8392—South Carolina House wants to secure garage supplies and equipment.

8387—New York House, in new location, wants garage equipment and supplies.

8389—Nebraska Company is in the field for garage equipment and supplies.

8394—Illinois Concern, well established, is looking for garage equipment and supplies.

8379—Massachusetts Concern, under new management, wants equipment selling at moderate price, for small garage, and general garage supplies.

8388—Mississippi House is interested in garage supplies and equipment.

8383—Iowa Company wants equipment and supplies for garage.

8398—Michigan Agent is interested in supplies for garage.

8395—Iowa Company will take garage supplies and equipment.

8397—New Jersey House is interested in securing garage supplies.

8385—New York Company is in the field for garage equipment and supplies.

8391—Maryland Garage wants to secure supplies and equipment for garage.

8381—Pennsylvania Company wants garage supplies and equipment.

8402—California Garage wants supplies and equipment for its establishment.

8532—Illinois Company is in the field to purchase equipment and supplies for garage.

8564—Indiana House is especially interested in securing garage equipment and supplies.

8528—Missouri Concern wishes to secure equipment and supplies for garage.

8568—Ohio Company is looking for garage supplies and equipment.

REPAIR SHOP AND MACHINE TOOLS.

6239—Nebraska Company is in the field for machine tools and repair shop supplies and equipment.

6255—Iowa Company would like to secure machine tools and supplies and equipment for repair shop.

6266—Utah Concern is interested in supplies and equipment for repair shop and machine tools.

6274—California House is in the market for machine tools and repair shop supplies and equipment.

6283—California Company is inquiring for equipment and supplies suitable for repair shop, and for machine tools.

6245—Illinois Company wants supplies and equipment for repair shop and machine tools.

6250—Ohio Concern is interested in machine tools and supplies and equipment for repair shop.

6241—Maryland Agent is in the field for supplies and equipment for repair shop and for machine tools.

6246—Iowa Company is looking for machine tools and repair shop supplies and equipment.

6249—Pennsylvania Company would like to secure supplies and equipment for repair shop and machine tools.

6236—New Hampshire Company, operating large garage, is in the field for repair shop supplies and equipment, and machine tools.

6233—Iowa Company, in new quarters, is open for machine tools and repair shop supplies and equipment.

6248—Michigan Company is in the field for machine tools.

6247—New Jersey House is looking for machine tools and repair shop supplies.

6240—Mississippi House is now open for machine tools and repair shop supplies and equipment.

6251—Ohio Company is interested in machine tools and repair shop supplies and equipment.

6237—New York Concern is interested in securing machine tools and repair shop equipment and supplies.

6235—New York Company is in the field for machine tools and repair shop supplies and equipment.

6234—Texas Company is interested in repair shop supplies.

6230—Massachusetts House is interested in supplies for small repair shop.

6238—Mississippi Company is interested in securing supplies and equipment for repair shop and machine tools.

6231—New Jersey Concern wants machine tools and repair shop supplies and equipment.

6244—New York Company, operating in three counties, is interested in repair shop supplies and equipment.

6243—South Carolina House is in the field for repair shop supplies.

6232—Pennsylvania Company wishes to secure machine tools and supplies and equipment for repair shop.

6252—California Concern is interested in machine tools.

MISCELLANEOUS OPPORTUNITIES.

3760—Massachusetts Concern is interested in securing vulcanizing supplies and equipment.

3761—Ohio Company is in the field to represent tire manufacturers.

THE ACCESSORY AND GARAGE JOURNAL
Devoted Exclusively to the Automobile Trade and Allied Interests

VOL. III. NOVEMBER, 1913. NO. 7.

AUTOMOBILE JOURNAL PUBLISHING CO.
Times Building Pawtucket, R. I.
William H. Black, Treasurer. D. O. Black, Jr., Secretary.
Publisher of
THE AUTOMOBILE JOURNAL THE MOTOR TRUCK

Offices in New York, Chicago, Detroit and Boston

SUBSCRIPTIONS.

The United States and Mexico, the year, $1 in advance; Canada and Foreign Countries in Postal Union, the year, $2 in advance. Fifteen cents the copy.

CONTRIBUTIONS.

Anonymous communications not considered. Correspondence on subjects relating to the motor industry and the trade will receive attention. Stamps must be enclosed to insure return of unsolicited contributions.

ADVERTISING.

Information supplied at request.

Advertising Copy for the ACCESSORY AND GARAGE JOURNAL requiring submission of proof must be received by 5th of month to insure publication in issue of the 15th of month.

Advertising Copy, proof not required, accepted to morning of the day before publishing day (unless such day is Sunday or holiday, when previous day is limit) of each publication.

Entered as second class matter Dec. 30, 1911, at the postoffice at Pawtucket, R. I., under the Act of March 3, 1879.

CONSIDERING THE OVERHEAD.

Many men have made money very easily in the automobile business, but the day has gone by when the prospective purchaser is willing to pay a large bonus to secure a delivery date. The demand no longer exceeds the supply, but it still exists, and careful study of the local field should afford plenty of opportunity for making sales. However, since conditions have changed, it follows that sales methods must change.

Some dealers appear to be under the impression that because an article costs them $1 and they can sell it for $1.25, the net profit to the dealer should be 25 per cent. on the investment. Such a method of calculating profits fails to take into account the matter of overhead.

By overhead is meant the items of rent, light, heat, power, salesmen's expenses, taxes, interest on the investment, depreciation, insurance, wear and tear on machinery, cost of delivery system, etc. Each of these has its direct bearing upon the sale of every dollar's worth of goods that leaves the place.

The successful man in any line of endeavor is he who keeps careful watch of the minor details. No man can expect to overcome difficulties without first learning of their existence. No automobile dealer, garage man or repair shop proprietor can hope to give the matter of overhead that attention which it requires without first adopting some system which shall detect the leaks and indicate the proper check upon them. Such a system need not be complicated or savor too much of red tape, but it should be certain in its results and enable the proprietor to know at all times whether he is conducting his business at a loss.

OUTLOOK FOR COMING SEASON.

The automobile industry, although one of the youngest in point of years, has grown very rapidly and now occupies a place very close to the head of the list of industrial institutions in this country. In takes enormous capital to finance such great enterprises. Some few concerns have recently found it necessary to withdraw entirely from the field, and others are undergoing a readjustment. The condition of the money market generally is such as to direct special attention to events of this character, and naturally some uneasiness may be felt among the dealers throughout the country.

It is only necessary to recall that during the so-called panic of 1907 the automobile industry was among the few which went through the period without suffering any appreciable effect. At that time, it also may be remembered, men of decided prominence in business life were deploring the fact that the public was investing its money in automobiles instead of gilt edged stocks and bonds. This was held to be particularly deplorable, since automobiles depreciated in value very rapidly.

It would be possible to draw some very interesting comparisons between the depreciation in value on motor vehicles and that which has befallen some of the stocks and bonds hitherto regarded as excellent investment securities. But the main point at issue is the stability of the automobile industry, and of this there can be little doubt.

The practicability of the modern motor vehicle, whether designed for passenger or freight service, is unquestioned. Its economic value is equally as certain. Business men have learned to depend upon both types, and if they were suddenly called upon to do without them, their importance in these respects would very quickly be made apparent.

Dealers have but to bear some of these facts in mind when considering the possibilities of the local market during the 1914 season. The failure of any one or several motor car manufacturers can have no very serious permanent effect upon the industry as a whole, and there is abundant evidence that the future holds much of promise to those who are prepared to conduct their business along strictly business lines.

GENERAL NEWS OF THE MANUFACTURERS.

The Kentucky Wagon Manufacturing Company, Louisville, Ky., has elected R. V. Board of Boston, Mass., president, to succeed W. C. Nones, who resigned to become chairman of the board of directors. Philip S. Tuley, Louisville, was elected vice president.

The B. F. Goodrich Company plant at Akron, O., was visited recently by 1000 members of the Knights Templar of Ohio.

The United Puncturine Company, Detroit, has established a branch agency at 4108 Olive street, St. Louis, Mo. Adolph F. Loehr is manager.

The J. P. L. Cyclecar Company, Detroit, has been organized to build a new cyclecar.

Chester L. Bicker, designer of the Henderson car, is interested in a new cyclecar to be known as the Bicar. A company will be organized with headquarters in Indianapolis, Ind., to manufacture this product.

O. G. Temme, Chicago, Ill., proprietor of the Triple Action Spring Company, has recently purchased the entire business of the Johnson Shock Absorber Company.

The Palmer-Moore Company, Syracuse, N. Y., has recently established agencies in Binghamton, Utica, Auburn, Hudson and Rochester, N. Y., and in Providence, R. I. Plans are now being made to enter Boston and the other New England territory.

The Mercer Automobile Company, Trenton, N. J., has recently announced the introduction of the Mercer limousine.

The Joseph Dixon Crucible Company, Jersey City, N. J., maker of Dixon's graphite lubricants, has been conducting a novel advertising campaign in the New York City territory, in which the automobile shown in an accompanying illustration has played an important part. The machine was in charge of A. G. Thomson, who was assisted by New York Manager John M. Ready and a corps of active salesmen. As a result, many automobile users in the Metropolis are better acquainted with the Dixon products.

The Metz Company, Waltham, Mass., through President Charles Metz, has announced that Metz cars will be entered in every honest test in which they have the opportunity to compete in 1914 and that a fund will be set aside for that purpose.

Arrol-Johnston, Ltd., Paisley, Scotland, manufacturer of a popular British car, has placed an order with Gray & Davis, Boston, Mass., for a large number of its starting and lighting systems.

The Crown Motor Car Company, Louisville, Ky., is now perfecting a new car that it intends to sell at around $400. The new machine, while light, will not be in the cyclecar class.

The National Drawn Steel Company, East Liverpool, O., has recently been organized with a capital of $100,000, to manufacture drawn steel products, including automobile appliances, gas engines, etc. It is expected that operations will be started in a few months.

The B. F. Goodrich Company, Akron, O., has established a Canadian branch at Toronto, Ont.

The Lustrine Manufacturing Company, Indianapolis, Ind., was recently formed with a capital of $10,000, to make Lustrine, a polish for automobile bodies. A workshop and laboratory have been opened on East New York street and operations will be started on a large scale when the company is settled in the quarters. M. A. Seligman and George M. Hollingsworth are interested in the new company.

The Ten Broeck Tire Company, Louisville, Ky., organized about the first of the year with a capital of $250,000, has found business to be very successful and the plant has been run all the year at full capacity.

The Akron Airless Tire Company, Akron, O., has been formed by a number of capitalists to make and sell a rubber core to be used in place of the inner tubes in pneumatic tires.

The Russian Tyre Sales Company, importer of Prowodnick tires, has been taken over by the Columb Tyres Imports Company. The salesrooms will be retained at 1891 Broadway and 71 Columbus avenue, New York City.

Will H. Brown, upon assuming his new duties as general sales manager of the Indianapolis branch of the Cole Motor Car Company, announced that the Brown Commercial Car Company will continue business the same as usual with office and service station at 425 North Meridian street, Indianapolis.

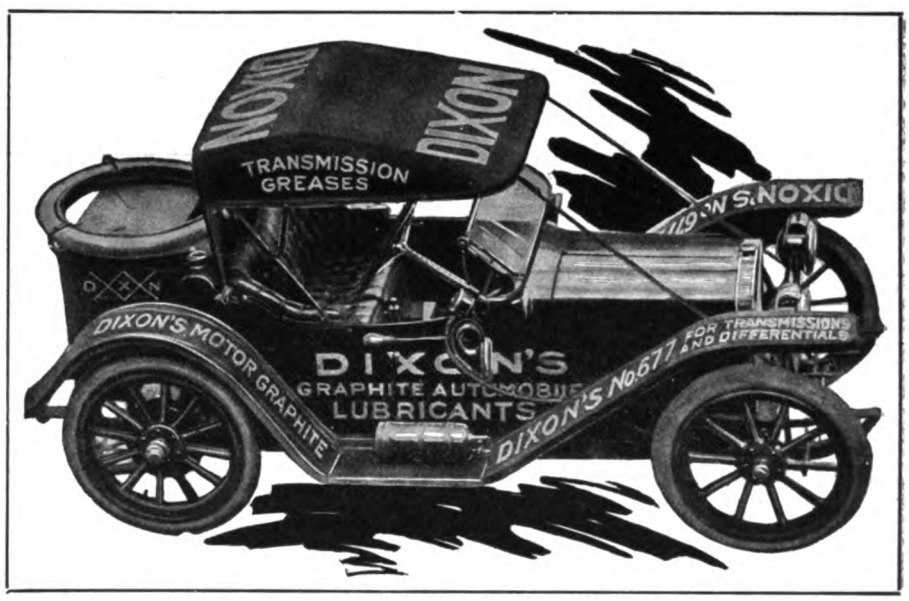
The Splitdorf Electrical Company, in the recent process of incorporation of the branch houses, made several important executive changes. The Splitdorf Electrical Company of Detroit is now incorporated with these officers: President, C. E. Brelsford; treasurer and manager, H. J. Hinley; secretary, W. J. Murray. The Splitdorf Electrical Company of Chicago has been incorporated with R. S. Preble as president and manager, and E. A. Kelley as secretary and treasurer.

The H. W. Johns-Manville Company, New York City, has taken control of the distribution of the Jones speedometer, made by the Jones Speedometer Company of the same city. New service stations will be established by the Johns-Manville company in all localities within the next few months.

The Ford Motor Company, Detroit, Mich., has established a new system of grading the employees which has resulted in a general increase in their salaries of about 13 per cent.

The American Cyclecar Company, Bridgeport, Conn., is now manufacturing the Trumbull cyclecar.

The Bosch Magneto Company, New York City, maker of the Bosch magneto, announces the appointment of new distributors as follows: Bertram Motor Supply Company, Salt Lake City, Utah; Schuman Carriage Company, Honolulu, T. H. The following are the new Bosch supply stations recently appointed: T. M. Caldwell, Amarillo, Tex.; Charles Arnholm, Barre, Vt.; A. R. Rettinghouse, Centralia, Ill.; Electric Service Company, Dallas, Tex.; Robert R. Ashwell, Hartford, Conn.; Bering Tire & Rubber Company, Houston, Tex.; Andrew Cowan & Co., Louisville, Ky.; Manley-Wilkins Company, Mt. Carmel, Ill.; Tire Trading Company, Newark, N. J.; J. M. Hubbard & Co., Norfolk, Va.; Tiffany Diamond garage, Poughkeepsie, N. Y.; H. G. Guenther, San Antonio, Tex.; Wyckoff-Cord Auto Company, Sioux City, Ia.; Child, Day & Churchill, Spokane, Wash.; Motor Shop, Trenton, N. J.; Tri-State Supply Company, White Plains, N. Y.; P. N. Montague garage, Winston-Salem, N. C.



Machine Utilized by Joseph Dixon Crucible Company in Dispensing Knowledge of Dixon's Graphite Lubricants.

REMOVALS AND NEW BUILDINGS.

The International Harvester Company, Akron, O., is erecting a large plant in that city for the manufacture of small delivery trucks.

The Van Blerck Motor Company, Detroit, Mich., is to move to Monroe, Mich., where a plant will be established.

The Michelin Tire Company, Milltown, N. J., it is reported, is to establish a branch manufactory in Canada.

The White Swan Cyclecar Company is to erect a factory at Marysville, Cal.

The Weston-Mott Company, Flint, Mich., has recently opened factory No. 7 to take care of the increased demand for the axles and rims that the company produces. The new building is of brick, 75 by 330 feet, and has a daily capacity of 3000 rims.

The Perfex Company, Los Angeles, Cal., has moved into its new factory at 52nd street and Santa Fe avenue.

The Anderson Electric Car Company, Detroit, has awarded the contract for the erection of an additional story to its building at 687 Woodward avenue.

The Pennsylvania Rubber Company, Jeannette, Penn.,

Digitized by Google

has started work on the erection of a new power plant. The building will cost $130,000.

The T. C. Beach Auto Turntable Company, St. Johns, Mich., has opened a Detroit office at 870 Woodward avenue. The company manufactures automobile turntables for garages.

Red Head Spark Plug's New Home in Bush Terminal, Brooklyn, N. Y.

The Pontiac Motor Castings Company, Pontiac, Mich., is enlarging its building.

H. R. Schoch, Philadelphia, Penn., is planning to erect a plant at Hunting Park avenue and Stokeley street for the manufacture of automobiles. The building will be of reinforced concrete, four stories and basement, 270 by 340 feet, and will cost approximately $100,000.

The Auto Parts Company, Providence, R. I., has secured a permit for the erection of a new building at Goff and Eddy streets. It will be of brick, one story high, 45 by 116 feet.

The Double Fabric Tire Company is building a new factory at Auburn, Ind., to replace the one destroyed by fire last spring. It will be 80 by 180 feet and will be used for the manufacture of Interlock inner casings.

The National Auto Radiator Company, White Plains, N. Y., has started business at 159 Stanley avenue.

The Light Inspection Car Company, Hagerstown, Ind., maker of the Teetor motor, is enlarging its quarters to take care of the necessitated larger output.

The Cole Motor Car Company, Indianapolis, Ind., has started work on the erection of a new building which will cost about $200,000. It will be four stories high, fireproof and otherwise modern throughout.

The Panther Rubber Manufacturing Company will erect a plant at Sherbrooke, Que., in the near future.

Grant F. Discher, president and general manager of the Garage Equipment Manufacturing Company, Milwaukee, Wis., has filed suit in the federal court at that city against the Milwaukee Auto Specialty Company on charge of infringements of patents on brackets for bumpers or protecting guards.

The Homer Motors Company, Los Angeles, Cal., will erect a new factory for the manufacture of motors and for the construction of a heavy tractor and light delivery wagons. There will also be a foundry for making all castings necessitated by the product of the company.

The Cookville Veneer Company, Cookville, Tenn., maker of automobile spokes, is to erect a new plant in connection with the one already established at Strong, Miss.

The Lyons-Atlas Company, Indianapolis, Ind., organized early this year to take over the business of the Atlas Engine Works of that city, and to produce a Knight engined car, is to make four and six-cylinder pleasure cars under the name of the Lyons-Knight, and commercial cars. Complete information as to the commercial vehicle line has not been made public as yet.

RECENTLY ANNOUNCED 1914 MODELS.

McFarlan—McFarlan Motor Car Company, Connersville, Ind. Six-cylinder. Motor, T head, en bloc, four-inch bore, six-inch stroke. Mea magneto. Stromberg model G3 carburetor. Centrifugal water pump, electric generator and air pump on left side of motor. Multiple disc clutch. Three-speed selective transmission. Full floating rear axle. Underslung three-quarter elliptic rear springs. Left hand drive, centre control. Two-passenger roadster, seven-passenger touring, four-passenger coupe and seven-passenger limousine. Prices, $2590 to $4000.

Oakland—Oakland Motor Car Company, Pontiac, Mich. Model 35 four-cylinder, model 43 four-cylinder and model 48 six-cylinder. Model 35 continued with changes largely in the nature of refinements in design and equipment. Model 43 retains the same general outward appearance of the old model 42. Larger motor, 4.25-inch bore and 5.25-inch stroke, instead of 4.125 by 4.75. Model 48 is new and is designated a little six. Motor, 3.5-inch bore and five-inch stroke, L head, cast en bloc; four main crankshaft bearings of ample size; double exhaust manifold, and inlet manifolds of special Oakland design. Delco combined ignition, lighting and starting system. Leather faced cone clutch. Three-speed selective transmission. New special control lever bolts to rear of gearbox. Semi-floating rear axle. New method of brake adjustment. Model 35 as touring car and roadster. Models 43 and 48 as touring car, cabriolet, coupe and sedan. Prices, $1150 and $1200 for model 35; $1785 for the others.

Jeffery—Thomas B. Jeffery Company, Kenosha, Wis. Formerly Rambler and Cross Country. New throughout. Two models, a four and a six. Motors the same dimensions, 3.75-inch bore, 5.25-inch stroke; L head, cast en bloc on the four and in pairs on the six. Rayfield carburetor. Bosch magneto. Inverted cone clutch, fitted with clutch brake. Four-speed gearset with centre control. Left hand drive. Floating annular ball bearing rear axle. U. S. L. electric system. Power tire pump. Four has wheelbase of 116 inches and tires, 34 by four inches; six has 128-inch wheelbase and tires, 36 by four. Four in roadster, five-passenger touring and sedan, also two-passenger coupelette. Six in five and six-passenger touring, sedan and limousine. The prices range from $1500 to $3700.

Mitchell—Mitchell-Lewis Motor Company, Racine, Wis. Three chassis, two sixes and a four. T head motors. Four and larger six have 4.25-inch bore and seven-inch stroke, while smaller six has same bore and six-inch stroke. Remy ignition. Full floating rear axle. Seven-eighths elliptic springs. Left hand drive, centre control Additional equipment. Four in two, four and five-passenger bodies; little six in the same and a seven-passenger; big six, seven-passenger only. Prices, four, $1595; little six, $1995; big six, $2350.

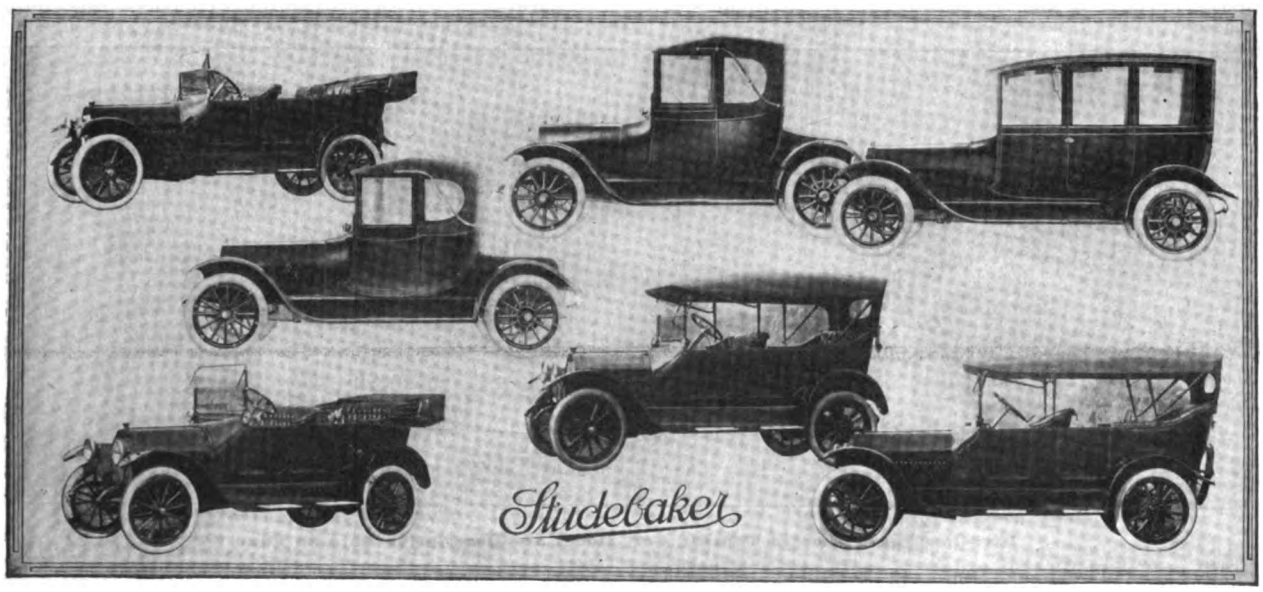
Metropol—Metropol Motors Company, 1926 Broadway, New York City. Roadster. New. Motor, four-cylinder, four-cycle, water-cooled, vertical, T head, cast en bloc; 4.25-inch bore, 7.875-inch stroke, said to develop 90 horsepower under brake test. Large valve diameter, 2.5 inches. Lubrication, combined force feed and splash. Three-speed selective transmission. Semi-elliptic springs. Artilery wood wheels, fitted with 33 by four-inch tires on Stanweld rims. Wheelbase, 115 inches, tread 56. Price, $1350.

Ohio—Crescent Motor Company, Cincinnati, O. Model Royal and 4-35. Former has a six-cylinder motor, four-inch bore and six-inch stroke, multiple disc clutch, four-speed transmission, full floating rear axle, left hand drive, centre control. Latter has four-cylinder motor, 4.25-inch bore and 4.75-inch stroke; multiple disc clutch, three-speed transmission, full floating rear axle, right hand drive, inside control. Both with five-passenger touring car bodies. Prices, four, $1275; six, $1985.

Luverne—Luverne Automobile Company, Luverne, Minn. The big brown Luverne, self-starting six. Motor rated at 50 horsepower; unit power plant. Bosch magneto. Rayfield carburetor. Multiple disc, dry plate clutch. Selective transmission. Full floating rear axle Wheelbase 128 inches. Tires, 36 by 4.5 inches, on Baker demountable rims. Pneumatic starting system, four-cylinder air compressor also supplying air for tires. Double lighting system. Five and seven-passenger touring bodies. Price, $2500.

Dorris—Dorris Motor Car Company, St. Louis, Mo. Model I. Five and seven-passenger touring car. Motor, four-cylinder, vertical, water-cooled, valve-in-the-head type, cast in pairs, 4.375-inch bore, five-inch stroke. Greater accessibility of camshaft gears, bearings and motor starter. Larger valve diameter, three inches instead of 2.25. Flechter carburetor. Bosch magneto. Westinghouse electric lighting and starting system. Special Dorris dry plate clutch has more plates. Larger tires, 26 by 4.5 inches, mounted on Stanweld rims. Left hand drive, centre control. Prices, five-passenger, $2500; seven-passenger, $2550.

Speedwell—Speedwell Motor Car Company, Dayton, O. This company states that the previous announcement in these columns created an erroneous impression, in that wire wheels (make not specified) can be supplied at an additional charge of $100, and 37 by five-inch tires are not supplied on the five-passenger models listing at $2850. Larger tires, together with extra seats, make a seven-passenger car, which lists at $2950.



Some of the New Body Designs Fitted to the Studebaker 1914 Models, Including Landau-Roadster, a Convertible Type of Attractive Lines.

Empire—Empire Automobile Company, Indianapolis, Ind. Model 31. Five-passenger touring car. Motor, four-cylinder, water-cooled, L head, with cylinders cast in pairs; bore, 3.75 inches; stroke, 4.5. Carburetor, model H Holley. Ignition, high-tension Eisemann magneto with fixed spark. Lubrication, combined splash and pressure feed. Cooling, thermo-syphon. Clutch, disc and ring. Transmission, selective, three speeds forward and reverse. Semi-floating rear axle. Front springs, semi-elliptic; rear, three-quarter scroll elliptic. Wheelbase lengthened to 110 inches. Tires, 32 by 3.5 inches. Right hand drive, centre control. Price, $900.

Studebaker—Studebaker Corporation, Detroit. Two chassis, a four and a six. Former fitted with two-passenger landau-roadster and touring bodies; latter with touring, landau-roadster and sedan. Motors have same bore and stroke, 3.5 by five inches. Two-unit electrical system replaces single member. Current supplied by LBA battery, also utilized for ignition, in connection with Remy distributor. Specially designed Schebler carburetor. Improved transmission. New clutch trunnion ring lubrication. Underslung elliptic springs at the rear. Left hand drive, centre control. Disappearing auxiliary seats on the seven-passenger six. Landau-roadster, a new type, copied from the design by Salmon & Sons, an English body builder. Prices, $1050 to $2250.

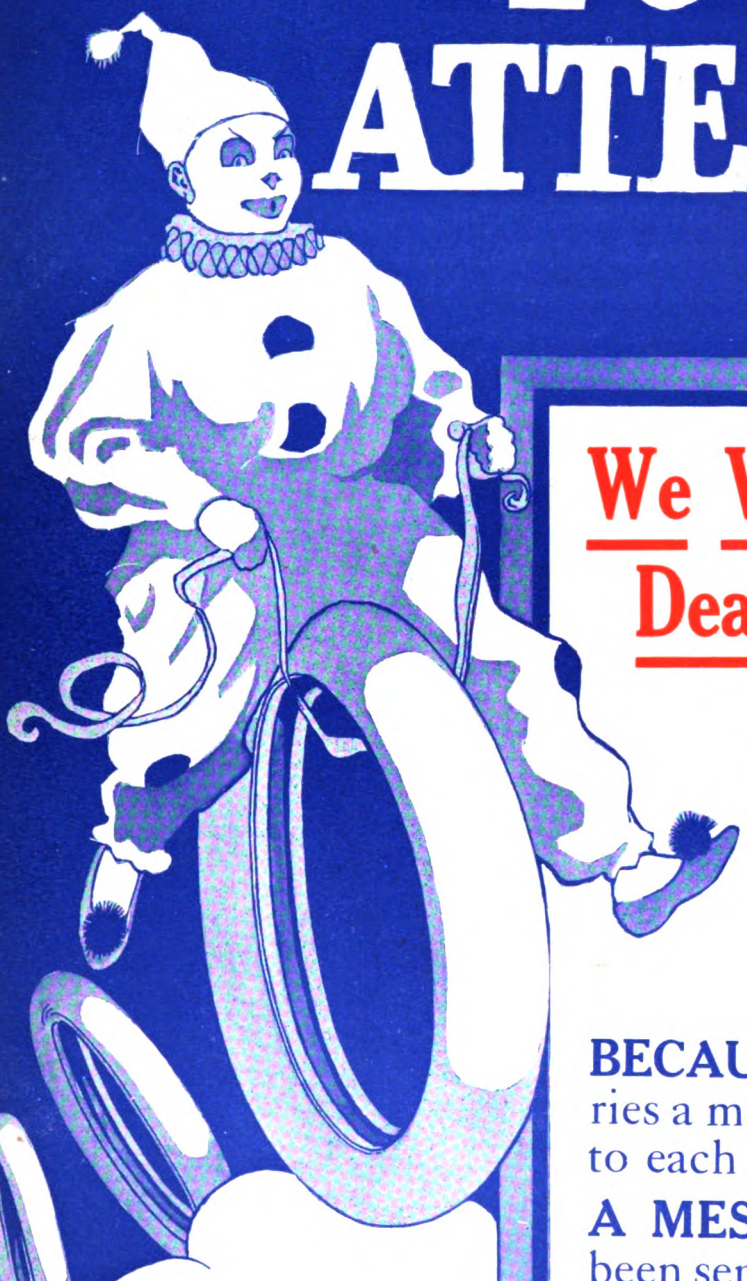
YOUR ATTENTION



We Want Every Dealer in the United States To Read This Ad

BECAUSE we feel that it carries a message that will appeal to each and every one—

A MESSAGE that has never been sent before—and one that means increased business, satisfied customers, with a rightful participation in the profits of your labor.

Digitized by Google

Plain Talk—Right From the Shoulder—On Why We Are Here, Where We Came From, and What We Intend to Do.

To begin with, eighty per cent. of the tire business of the United States is handled by twenty manufacturers—that the number of cars manufactured each year has advanced tremendously, while the number of tire manufacturers has not increased in proportion. In order to meet this increased demand for tires there has, of course, been a sacrifice of quality for quantity. Result—an army of dissatisfied owners.

QUALITY DEMANDED

With these facts as a basis to work on and with the idea paramount in their mind that a tire made right, of right materials, and marketed right was what the touring public demanded, the Cataract Rubber Company for years have had the highest priced men in the industry at work designing and building a tire up to a supreme quality standard.

Necessarily this policy entailed a high degree of skill and workmanship, competent management and a high order of salesmanship to place this kind of a tire on the market. The company decided that the safest and surest method of successfully marketing the tire was to localize the business from a central point of a large market in a small area of territory. New England was selected as the territory and Boston the distributing center. *Unqualified success has met our efforts there.*

ABSOLUTE DEALER PROTECTION

Two years of conservative work has proven the success of our methods. With a fixed business in New England that testifies to every claim made, we are prepared with an additional output of 50,000 tires for 1914, to nationalize The Cataract Tire.

In making a bid for this additional business the keynote of our campaign is proper classification of the trade in each territory and an *absolute protection for Mr. Dealer on the business he creates.*

Digitized by Google

WHY WE APPEAL TO YOU, MR. DEALER

We feel that your business demands a tire of the Cataract quality. But we further feel that your business demands a selling plan such as we offer. A co-operative policy that means a rightful participation in the result of your work. The Jobber and Dealer today are not handling standard tires on a marginal profit commensurate with the time, money and labor expended in handling a product for which there is such an unlimited demand.

CATARACT POLICY

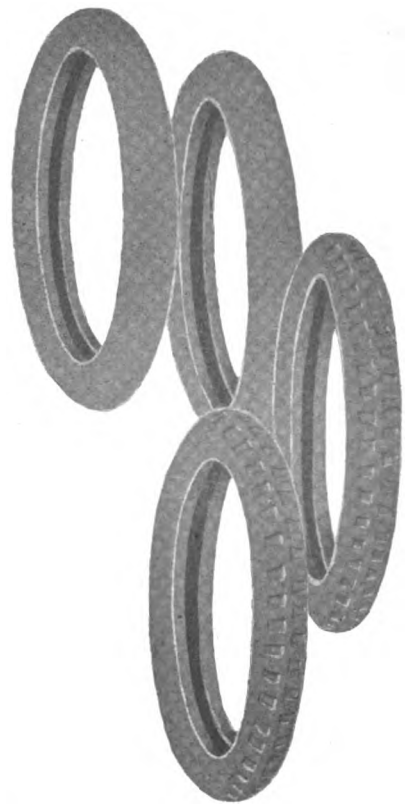
On the strength of this condition, the Cataract Rubber Company has adopted a policy toward the Dealer similar to that used by other highly successful manufacturers of standard commodities; one that will insure a splendid margin of profit to the dealer year in and year out. The Company has decided that when a dealer or jobber has built up a certain percentage of total business in his territory in a year or two it is the duty of the Company to back up this dealer and jobber in the ensuing years of success and that he is entitled to the extreme margin of profit, the result of a protected price situation in the territory in which he is operating.

READ OUR OFFER

To the end of giving an opportunity to live dealers throughout the country of identifying themselves with the sale of Cataract Tires and taking advantage of this co-operative policy and signing up a long time Cataract service contract we are making the following offer to the trade.

Digitized by Google

LET US SEND YOU FOUR TIRES ON APPROVAL



We want you to know Cataract *tires. We want you to realize from experience by using them that they are all that we claim. To this end we will fill a trial order of four tires, two plain and two break skid, guaranteed 4000 miles each and sell them to you at 30% off on any size included in our consumers' list. Orders for more or less than this number, or specifications calling for more than two plain treads and more than two break skids will not be filled at this price.*

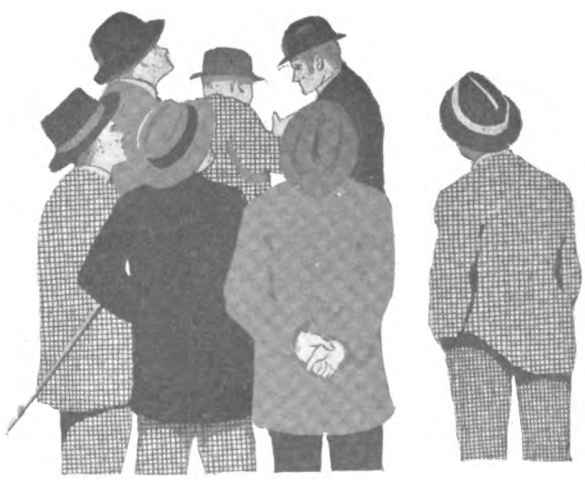
CATARACT GUARANTEE

Before ordering weigh well the following statements to which 6000 users in New England will testify to their absolute truth:

The Cataract Tire is built to fill the unfilled demand of quality trade.

The Cataract Tire construction was specified two years ago with this one object in view. *It has made good.*

The Cataract Tire represents the finished art of fabricating cotton and rubber into the toughest, most resilient, and most durable product ever offered the trade.



The Cataract Tire is being merchandized along lines different from standard and the Company manufacturing it has adopted a policy that insists upon the dealer receiving his *full percentage of profit.*

Reduced to a concrete policy this means co-operation with the jobber for the betterment of the consumer by the manufacturer of a high grade quality tire that is sold to the distributor, jobber, dealer and consumer on *price schedules* that are *absolutely maintained.*

As per your offer in Accessory and Garage Journal, kindly send me facts on your Trial Order.

Emergency Spindle, William Harvey Vanskiver, Leetonia, O., assignor to Auto Machine Company, same place, No. 1,076,471. Filed April 7, 1913.

Open Exhaust Silencer, Constand Francois Marie Galaine, Rennes, France, No. 1,076,494. Filed Jan. 27, 1913.

Spark Plug, Frank C. Walsh, Cleveland, O., assignor to the Sharp Spark Plug Company, same place, No. 1,076,535. Filed Oct. 28, 1911.

Jack, James T. Dillon, Greenwich, Conn., No. 1,076,555. Filed April 3, 1912.

Demountable Wheel, Thomas I. Duffy, Chicago, Ill., assignor to Ellsworth & Cross, same place, No. 1,076,557. Filed July 1, 1910.

Illuminated Sign, Peter Lee Ferguson and Joseph W. Wheelwright, Ogden, Utah, No. 1,076,566. Filed Sept. 13, 1912.

Motor Starter, George J. Burkhardt, Burlingame, Cal., No. 1,076,660. Filed Oct. 2, 1911.

Time Register, Louis H. Friedman, Norfolk, Va., No. 1,076,668. Filed Dec. 18, 1912.

Spark Plug, Albert Schmidt, Flint, Mich., assignor to Champion Ignition Company, same place, No. 1,077,002. Filed May 1, 1911.

Lamp Attachment, William Q. Pfahler, Toledo, O., No. 1,076,699. Filed March 29, 1913.

Emergency Tire, Luther M. Tichenor, Owensville, Ind., No. 1,076,719. Filed March 13, 1913.

Separable Rim, William M. Wirth, St. Louis, Mo., No. 1,076,730. Filed Aug. 19, 1912.

Demountable Rim, Coy Richard Cantrell, St. Louis, Mo., No. 1,076,744. Filed Nov. 23, 1912.

Primer, William J. Presley, Grand Haven, Mich., No. 1,076,783. Filed Jan. 13, 1913.

Carburetor, Arthur L. Haynes, Clyde, Kan., No. 1,076,827. Filed Feb. 6, 1912.

Resilient Wheel, Edward A. Schlairet, Mount Vernon, O., No. 1,076,914. Filed July 31, 1912.

Tire, Edwin J. Shaut and William A. Dunham, Jackson, Mich., No. 1,076,916. Filed Oct. 31, 1912.

Wheel and Tire, George M. Davenport, Keo, Ark., No. 1,077,044. Filed April 14, 1913.

Shock Absorber, George H. Dangleman, Philadelphia, Penn., No. 1,077,124. Filed March 28, 1913.

Tire, Henry J. Doughty, Edgewood, R. I., No. 1,077,128. Filed Sept. 25, 1912.

Lamp, Charles G. Myers, Cleveland, O., No. 1,077,153. Filed Nov. 15, 1911.

Lamp, Theodore P. Driver, Melrose, Mass., No. 1,077,192. Filed Nov. 7, 1912.

Carburetor, Alanson P. Brush, Detroit, No. 1,077,256. Filed March 21, 1912.

Shield for Pneumatic Tires, James E. Fawcett, Platteville, Wis., No. 1,077,267. Filed April 20, 1912.

Tire Protector, Ralph V. Hastings, Chicago, Ill., No. 1,077,275. Filed Jan. 19, 1912.

Tire Locking Ring, Walter L. Kelley, Pawtucket, R. I., No. 1,077,282. Filed July 14, 1911.

Motor Starter, John F. O'Bert, Los Angeles, Cal., No. 1,077,292. Filed Oct. 8, 1912.

Wrench, Gustaaf Adolph Rienks, Freeport, Ill., No. 1,077,303. Filed Dec. 18, 1912.

Electric Horn, Ralph R. Root, Cleveland, O., assignor to the Adams-Bagnall Electric Company, same city, No. 1,077,307. Filed March 31, 1913.

Tire, Benjamin Coplin Seaton, Detroit, No. 1,077,310. Filed Dec. 2, 1909.

Valve for Internal Combustion Engine, Carl E. Swenson, Rockford, Ill., No. 1,077,317. Filed July 8, 1912.

Spark Plug, William S. Witter, Toledo, Ia., No. 1,077,325. Filed Nov. 20, 1911.

Speed Control, Russell Huff, Detroit, assignor, by mesne assignments, to Packard Motor Car Company, same city, No. 1,077,348. Filed May 27, 1907.

Water Trap for Carbide Light Systems, James B. McDevitt, Chicago, Ill., No. 1,077,358. Filed Oct. 17, 1912.

Convertible Cycle Motor, Lawrence S. Nash, Detroit, assignor, by mesne assignments, to Oliver Motor Car Company, same city, No. 1,077,363. Filed Sept. 26, 1907.

Internal Combustion Engine, John Willoughby, New York City, assignor of one-half to George W. Bayley, Brooklyn, N. Y., No. 1,077,381. Filed Jan. 4, 1912.

Gas Engine Starter, Edwin D. Bangs, Milwaukee, Wis., No. 1,077,386. Filed Aug. 20, 1910.

Vehicle Wheel, Joseph Bray, Arlington Station, Cal., No. 1,077,388. Filed Oct. 23, 1911.

Anti-Skid Attachment, Joseph G. Florack, Rochester, N. Y., No. 1,077,401. Filed Oct. 14, 1912.

Tire, Albert B. Hollenbeck, Sidney, N. Y., No. 1,077,407. Filed June 8, 1910.

Spring Wheel, Peter M. Kling, Elizabeth, N. J., No. 1,077,410. Filed Oct. 20, 1909.

Cooling Device for Engine, George W. Marsh, Oakland, Cal., No. 1,077,414. Filed Jan. 6, 1913.

Nut Lock, William S. Old, Youngstown, O., No. 1,077,425. Filed Feb. 3, 1912.

Tire Protector, Varney K. Sturges, Oakland, Cal., No. 1,077,440. Filed Dec. 10, 1912.

Controllable Headlight, Francis G. Anspach, Deerfield, Mich., assignor of one-third to Vernon B. Cannon, same city, No. 1,077,450. Filed July 16, 1912.

Spring Wheel, Arthur D. Seibert and Burton R. And-

rus, Pendleton, Ore., No. 1,077,434. Filed April 14, 1913.

Adjustable Reamer, Robert L. Ellery, Portsmouth, N. H., No. 1,077,463. Filed Aug. 17, 1912.

Tire, Gottlieb Anger, McKees Rock, Penn., assignor of one-half to Theodore A. Sprague, Bellevue, Penn., No. 1,077,504. Filed Oct. 28, 1912.

Battery Box, Charles A. Mahla, New York City, No. 1,077,539. Filed March 6, 1913.

Wrench, Samuel Moss, Waltham, Mass., No. 1,077,543. Filed Jan. 22, 1913.

Vehicle Brake, Stephen R. O'Brien, Pittsburg, Penn., No. 1,077,546. Filed March 24, 1913.

Auto Dumping Truck, Ernest Henry Vincent, Emeryville, Cal., No. 1,077,570. Filed June 20, 1911.

Wrench, Frank C. Wutke, Chicago, Ill., No. 1,077,575. Filed Feb. 25, 1913.

Resilient Wheel, Gilbert A. Leitzman, Clayton, Ind., No. 1,077,612. Filed July 25, 1912.

Car Motor, William F. Davis, Kansas City, Kan., assignor to McKeon Motor Car Company, No. 1,077,679. Filed Oct. 10, 1905.

Combustion Engine, Hugo Junkers, Aix-la-Chapelle, Germany, No. 1,077,718. Filed Oct. 7, 1907.

Motor Control System, Edwin J. Murphy and John E. Brobst, Schenectady, N. Y., assignors to General Electric Company, No. 1,077,737. Filed June 20, 1912.

Sidecar Attachment for Motorcycles, Oron Overton, Mobile, Ala., No. 1,077,743. Filed May 24, 1912.

Nut Lock, Alma P. Stark, Spanish Fork, Utah, No. 1,077,763. Filed Dec. 17, 1912.

Shock Absorber, Carl Yeager, Birdsboro, Penn., No. 1,077,781. Filed March 15, 1913.

Resilient Tire, David A. York, Northgrove, Ind., No. 1,077,782. Filed Dec. 7, 1912.

Lubricating System for Gas Engines, Julian P. Farnham, Minneapolis, Minn., assignor, by mesne assignments, to Emerson-Brantingham Company, Rockford, Ill., No 1,077,823. Filed Feb. 9, 1912.

Engine Starter, John Deam Kneedler, Sioux City, Ia., assignor of one-third to Buel Couch and one-third to N. T. Hanson, same city, No. 1,077,841. Filed Sept. 17, 1912.

Engine Starter, Gilson W. Roth, Jackson township, Brown county, Ind., assignor, by direct and mesne assignments, to George H. Evans, Evansville, Ind., No. 1,077,858. Filed June 10, 1910.

Muffler, Edward L. Dewey, Whiting, Ind., No. 1,077,905. Filed March 10, 1913.

Carburetor, William H. C. Higgins, Laporte, Ind., No. 1,077,910. Filed Oct. 14, 1910.

Stop Cock for Motor Vehicles, Jean Mazuel, Paris, France, No. 1,075,429. Filed Feb. 3, 1913.

Electrical Distributor, James L. Adams, Jr., Wilkinsburg, Penn., assignor to Westinghouse Electric & Manufacturing Company, No. 1,075,457. Filed Nov. 16, 1911.

Self-Propelled Sleigh, Andrew J. Denney, Cambridge, Idaho, No. 1,075,465. Filed Aug. 5, 1912.

Connecting Means for Springs, Jacques Minette de Saint Martin, Paris, France, No. 1,075,498. Filed Oct. 10, 1912.

Demountable Rim, Robert P. Scott, Cadiz, O., No. 1,075,501. Filed March 14, 1911.

Wrench, Robert W. Sturdy, Stephenson, Mich., assignor of one half to Cassius W. McEwan, Omaha, Neb., No. 1,075,516. Filed May 13, 1912.

Explosive Engine, Joseph F. Buhr, Detroit, assignor, by mesne assignment, to Herman B. Strate and Joseph F. Buhr, Detroit, No. 1,075,545. Filed Feb. 7, 1911.

Indicating Device, Mildred Felix, New York City, No. 1,075,555. Filed Feb. 23, 1907.

Battery, William H. Fenoughty, Belleville, Ill., assignor to American Carbon & Battery Company of Missouri, No. 1,075,556. Filed May 12, 1913.

Automobile Construction, Henry Ford, Detroit, No. 1,075,557. Filed July 21, 1909.

Internal Combustion Engine, Frederick O. Kilgore, Somerville, Mass., No. 1,075,578. Filed Dec. 28, 1911.

Ignition and Starting Mechanism, Loren E. Clark, Madville, Penn., No. 1,075,763. Filed Feb. 7, 1913.

Frame for Motor Bicycles, Edward Y. White, San Antonio, Tex., No. 1,075,886. Filed March 9, 1906.

Two-Cycle Engine, Ellis J. Woolf, Minneapolis, Minn., assignor to the Woolf Valve Gear Company, same place, No. 1,075,889. Filed Oct. 26, 1908.

FOREIGN TRADE OPPORTUNITIES.

(Address Bureau of Foreign and Domestic Commerce, Washington, Giving Number, Which Will Forward Correspondence, Unless Otherwise Stated.)

11,841. Automobile Supplies—An American consular officer in France reports that an agent in his district handling automobiles desires to get in touch with American automobile supply manufacturers. Catalogues, price lists, etc., are desired. Correspondence should be in French, if possible.

11,849. Low Priced Automobiles—A report from an American consul in Spain states that a local dealer in low priced automobiles wishes to handle, in addition to his present business, a line of heavier and more powerful cars which retail in the United States at from $1200 to $1900. Only manufacturers of landaulet cars are requested to reply, as there is no sale for touring cars. French landaulet cars only are on the market and it is thought that a good market can be created for American cars of a similar type. Models must approximate the European type of landaulet cars. Catalogues and correspondence should be in Spanish, if at all possible, and should be sent direct to the dealer referred to. References will be given and required.

11,879. Automobiles—A business firm in southern Europe requests an American consul to place it in touch with American manufacturers of low priced automobiles. The firm states that it desires to represent an American firm manufacturing low priced, light cycle, shaft driven motor vehicles, and also to carry such machines in stock. Catalogues, prices, terms and discounts are requested; correspondence may be in English. The firm furnishes as references a list of companies it already represents.

11,883. Automobiles, Motorcycles and Motor Boats—A European business man informs an American consulate that he desires to be placed in communication with American manufacturers of automobiles and parts of same, motorcycles and motor boats, with the object of importing the same. The inquirer states that he will represent such manufacturers as selling agent, or purchase direct on his own account. Catalogues, prices and terms of discount are requested. Correspondence should be in English. This man furnishes a list of English firms that he now represents, whose names are given as references.

11,885. Motor Fire Truck—A report from an American consul in Canada states that as a result of a trade opportunity from his office a local firm has purchased in the United States an automobile truck which is said to be cheaper and much better than the Canadian article. The possibilities of further sales are thought to be very favorable. The fire department of the city has under consideration the purchase of an automobile truck, and American manufacturers would do well to get in touch with the chief of the fire department.

11,969. Motor Boats—An American consul in a Latin-American country reports that a local government official desires catalogues and other information regarding motor boats suitable for arming and equipping for military service on rivers. Any language may be used, but Spanish is preferable.

11,990. Detachable Motors for Boats—A business firm in a European country informs an American consular officer that it wishes to import external motors for boats, similar to a cut furnished and which may be obtained from the bureau of foreign and domestic commerce. Manufacturers should communicate with this firm as soon as possible.

COMING EVENTS.

November.

Nov. 22-29—Show, Providence, R. I.

December.

Dec. 1-3—Annual meeting, American Automobile Association, Richmond, Va.
Dec. 9-12—Convention, American Road Builders' Association, Philadelphia, Penn.
Dec. 10-12—Convention, Retail Implement & Vehicle Dealers' Association, Milwaukee, Wis.
Dec. 11-20—International exposition of safety and sanitation, American Museum of Safety, New York City.

January.

Jan. 2-10—Importers' Salon, Hotel Astor, New York City.
Jan. 3-10—Pleasure car show, Grand Central Palace, New York City.
Jan. 4- 8—Winter meeting, Society of Automobile Engineers, New York City.
Jan. 10-16—Show, Milwaukee, Wis.
Jan. 10-17—Show, Cleveland, O.
Jan. 12-17—Show, Bridgeport, Conn.
Jan. 24-31—Show, Rochester, N. Y.
Jan. 24-31—Pleasure car show, Coliseum, Chicago, Ill.
Jan. 26-31—Show, Scranton, Penn.
Jan. 31-Feb. 7—Show, Minneapolis, Minn.

February.

Feb. 2- 7—Pleasure car show, Buffalo, N. Y.
Feb. 9-14—Truck show, Buffalo, N. Y.
Feb. 16-21—Show, Kansas City, Mo.
Feb. 18-21—Show, Bloomington, Ill.
Feb. 21-28—Show, First Regiment Armory, Newark, N. J.
Feb. 21-March 4—Show, Cincinnati, O.
Feb. 23-28—Show, Omaha, Neb.

March.

March 2- 6—Show, Fort Dodge, Ia.
March 7-14—Pleasure car show, Mechanics' Building, Boston, Mass.
March 9-14—Show, Des Moines, Ia.
March 17-21—Truck show, Mechanics' Building, Boston, Mass.

April.

April 9-15—Show, Manchester, N. H.

May.

May 30—500-mile race, Indianapolis, Ind.

ACCESSORIES, SUPPLIES, AND FITTINGS.

(When Writing to Advertisers, Please Mention The Accessory and Garage Journal.)

Dayton License Holder.

The Dayton Malleable Iron Company, Dayton, O., is manufacturing two new designs of license plate holders. The front style comprises two right angle arms, also a clamping construction, fitting around the filler member of the radiator. The securing device differs from conventional design in that it is made to clamp around oblong or round filler members. It is locked by a bolt and nut. The rear design is made with a combination socket, permitting of its use with either a round or flat lamp iron, and assures proper illumination of the number plate. Both styles have adjustable means, thumb nuts and lock washers.

Pruden Auto Chair.

The W. E. Pruden Hardware Company, 260 West 52nd street, New York City, is marketing three styles of collapsible automobile chairs which may be folded very compactly and utilized when an extra passenger is to be carried. They are made in three sizes, that for a child being 12 inches, the medium 15 and the large 17. They have comfortable seats and backs, upholstered in maroon or black leather, and the entire construction is substantial as well as light.

Masco Air Gauge.

The service obtained from tires depends largely upon the owner. One of the most important rules for the motorist to observe is proper inflation of the shoes and every manufacturer recommends the use of a tire gauge when fitting a casing and in service. The Motorcycle Accessories Company, St. Paul, Minn., is marketing the Masco air gauge, which differs from usual design in that it is permanently attached to the valve stem by a lock nut. The dial is approximately the size of a 10-cent piece, calibrated, and a watch hand denotes the pressure. It makes for convenience in that the hand may be watched while inflating the tire. The dial is protected by a hinged lid. The device is very compact and as will be noted by the accompanying illustration, is fitted with a conventional type of valve cap. The Masco retails for $1.50.

XXX Spark Plug.

The XXX Auto Accessory Company, Springfield, Mass., is manufacturing a novel spark plug termed the XXX, which is sold under a money-back guarantee. The feature of the plug is the use of detachable electrodes, a design permitting of replacement of damaged or burned members at a very slight expense and without difficulty. The gap is double with this plug, and there are a number of interesting features which are explained in the booklet issued by the company. It will be mailed free on request. It sells for $1.

Ten Eyck Automatic Air Pump.

The Ten Eyck Pump Company, Auburn, N. Y., is producing the Ten Eyck automatic air pump, which is designed for service with motor starting systems and for inflating tires. When utilized on the motor car the gearshift is automatically controlled by a separate cylinder and piston, which is operated by the pressure in the storage tank or the tire. The back pressure from the air receiver slides the pump gear into mesh with the driving gear, the pump gear running idle until the two gears are partly meshed. The clutch is then engaged. Disconnecting the pump from the air receiver allows the pressure to escape from the automatic cylinder and the gears are disengaged by means of a spring. In this operation the clutch is first disengaged, permitting the pump gear to run idle while being drawn out of mesh. This arrangement makes easy engagement and disengagement of the gears without reducing the motor speed. When the pump is utilized in connection with a storage tank for starting purposes, a special air valve and pressure gauge is inserted in the pipe between the pump and the tank, and is usually mounted on the dash. The operation of this valve is automatic. The Ten Eyck pump is 10 by 4.5 inches, weighs 10 pounds and has a capacity of two cubic feet a minute. All parts are constructed of high grade material and the workmanship is first class in every respect. The equipment includes 15 feet of rubber tubing, pressure gauge and hose fittings. It is listed at $25.

Ka-Ha-Co Horn.

The Kales-Haskel Company, Detroit, announces the Ka-Ha-Co electric horn, with which it is stated a powerful note is obtained without harshness. The construction is simple, well known electrical engineering principles being utilized, and it is stated that its service cannot be impaired, except through injury. It comes finished in brass and black, also nickel and black, the latter type costing $1 more. The horn is moderately priced and with it is furnished suitable length of cable and push button.

Auto-Queen Wrench Set.

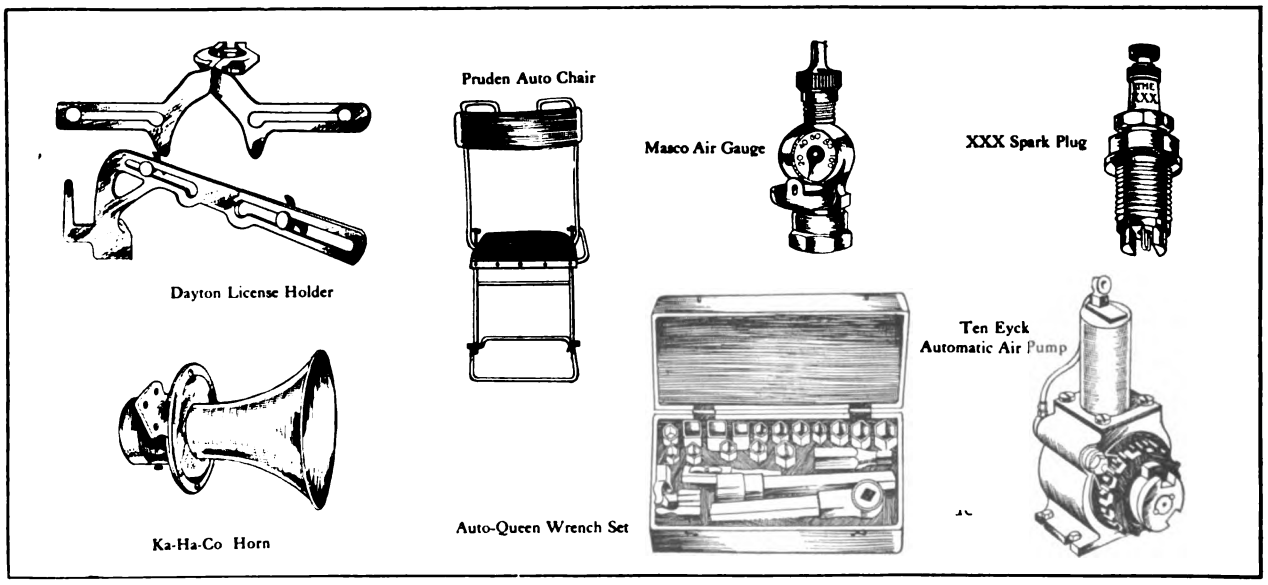
The C. M. B. Wrench Company, Garwood, N. J., is manufacturing the Auto-Queen wrench set, which is specially designed for motor car work. The No. 11 set includes a ratchet wrench, universal joint, long extension, screw driver, spark plug socket and 15 sockets. The last named members provide for hexagon parts from .25 to .625 inches, cap screws from .25 to .5625 inch and square from .25 to .375 inch. The outfit comes in a neat, substantial hard wood box. Its weight is seven pounds. The No. 12 set is less expensive and not as complete, but includes sufficient sockets, etc., to complete ordinary work. The company also manufactures wrench equipments for factories and for machinists. The No. 11 retails for $6.50; the No. 12 for $4.

Hans Ford Oil Gauge.

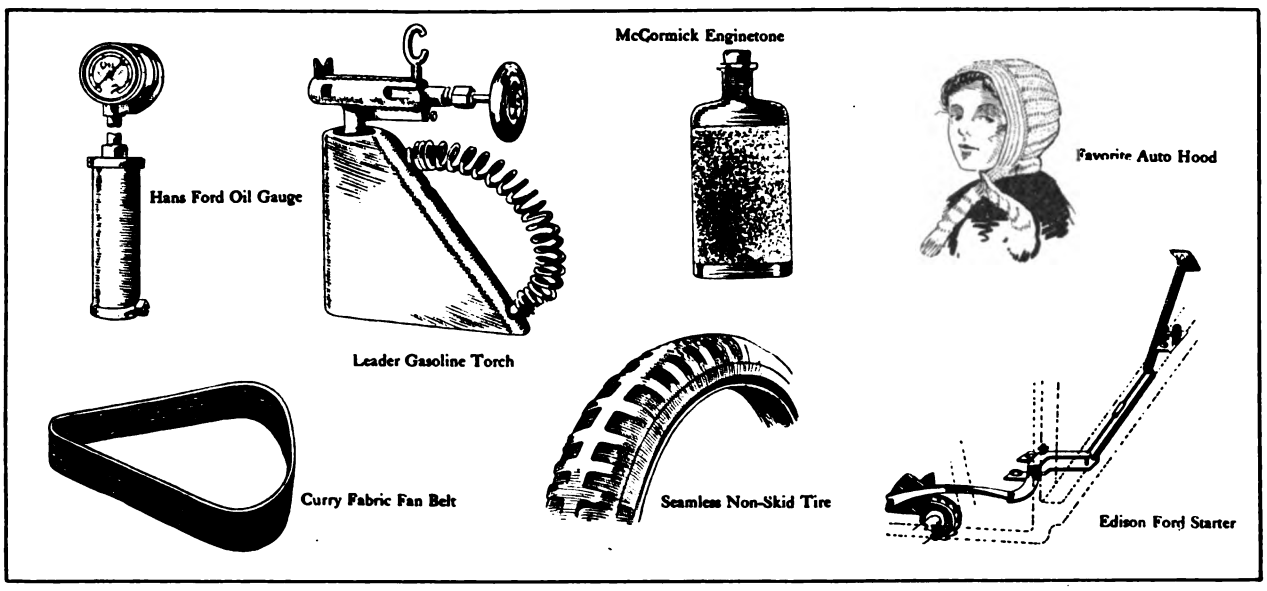
The American Auto Supply Company, 1741 Broadway, New York, is marketing the Hans Ford oil gauge, which differs from the usual lubricator indicators, in that it is placed on the dash in plain view of the operator, and it is stated that the height of the oil in the crankcase is accurately shown. A float chamber is connected to the crankcase of the motor by a close nipple or pipe, and the float with the indicating dial, so that any change in the float chamber is instantly shown on the dial. It is supplied complete with all fittings, etc., and instructions. It is designed for attachment to 1911, 1912 and 1913 model T Ford cars. It retails for $5.

Leader Gasoline Torch.

A torch is a valuable addition to the garage equipment, as it may be utilized for a number of useful purposes, such as heating soldering irons, starting frozen nuts, etc. The Leader Manufacturing Company, Cleveland, O., is producing a compact blow torch, which is equipped with a device for retaining the iron. Soldered joints or seams are eliminated by the construction and the torch is fitted with an Alaska wire coil handle, per-



Digitized by Google



mitting of easy handling without danger of burning the hand. It sells for $7.

McCormick Enginetone.

The McCormick Manufacturing Company, Dayton, O., is offering a carbon destroyer called Enginetone, which is a chemical preparation, a fluid, supplied in a bottle. It is stated that it does not contain any oil, acid or explosive, or inflammable material. It is used in proportions of a teaspoonful to a cylinder and it is said that it will break up carbon without injury to the metal. Each bottle contains six ounces and retails for $1.

Favorite Auto Hood.

The Favorite Knitting Mills, successor to A. J. Mandel & Co., 1388 West Sixth street, Cleveland, O., is manufacturing a practical article for women and children who motor, termed the Favorite auto hood. The design is not only neat appearing, but it protects the head of the user and the shape and material makes for decided comfort. It is made in differing sizes, in all wool worsted, fibre silk and mercerized. A wide variety of shades is offered and the price is very moderate. One of the features of the Favorite auto hood is that it keeps the hair shapely when motoring.

Curry Fabric Fan Belt.

One of the objections to belt drive is that the material will stretch in service, due to atmospheric changes, oils, etc. The C. & B. Hinson Company, Grove and Liddell streets, Cincinnati, O., is manufacturing the Curry fabric automobile fan belt, which it is stated will withstand oils, greases, heat, etc., and it is also claimed that it will not stretch after service. The belts are woven by special machinery, of a high grade upland cotton and linen thread, then treated by a secret process which renders them proof against the troubles outlined above. The belts are made endless, to fit any design of fan pulley on the motor and are moderately priced. The company makes a specialty of belts for model T Ford cars, and is prepared to supply them in any lengths, furnishing a special belt fastener. The Curry belting is also made in rolls for the trade, and of standard dimensions. The retail price is 25 cents.

Seamless Non-Skid Tire.

The Seamless Rubber Company of New York City, with factories at New Haven, Conn., offers the Seamless non-skid tire, which is constructed of the same high grade material and workmanship as the other products of this concern. The company lays special emphasis on the fact that it employs only the pure Brazilian Para rubber and the finest of Sea Island cotton, which is specially woven and cut diagonally to obtain the maximum amount of flexibility and tensile strength. The company employs the single cure process and each casing is covered by the usual 3500-mile guarantee. The Waite Auto Supply Company, Providence, R. I., is Rhode Island distributor.

Edison Ford Starter.

The Consolidated Gas & Electric Company, 552 West Lake street, Chicago, is marketing the 1914 model Edison starter for model T Ford automobiles. It is a mechanical motor starter, operated from the seat, and it is stated that little exertion is required to spin the engine as the leverage is compounded. Energy is applied through suitable linkage to the ratchet wheel on the crankshaft, a pawl engaging with this gear, but provided with a device to compensate for any back fire of the motor. It is stated that the system can be applied without alterations and that no tools other than a wrench and hammer are necessary. It does not interfere with the use of the usual starting crank, which is retained. The company also manufactures a model for the K-R-I-T, Regal and Studebaker cars. The Ford starter sells for $27.50.

Motophone Horn.

The Automobile Supply Manufacturing Company, 220 Taaffe Place, Brooklyn, N. Y., is introducing a new horn known as the Motophone. It is mechanically operated, a slight pressure on a conveniently located lever resulting in a loud, steady, pleasant sound. The operating mechanism has been perfected by the maker after long experimentation and it is stated that in a test 5,000,000 signals were given without any adjustment being necessary. The maker calls attention to the convenience of the signal, in that its operation does not depend upon batteries. Throughout the workmanship and material is in keeping with the high grade product for which the concern is noted.

A. A. S. Priming Cup.

With the approach of cool weather more or less trouble will be experienced in starting a cold motor. While the majority of manufacturers make provision for priming, a large number of cars are not equipped with priming cups. The American Automobile Supply Company, 1741 Broadway, New York City, and 1408 Michigan avenue, Chicago, markets a number of inexpensive, high grade priming cups, one of which is shown in an accompanying illustration. The cup is constructed of the best quality brass, carefully machined and nicely finished. It is fitted with spring key and cotter pin and it is stated it will not jar loose or leak. This design is furnished nickel plated and has a fibre handle, enabling opening of the cock when the motor is hot. The priming cup is made in .125 and .25-inch threads and weighs about four ounces.

Lord Air Cleaner.

Analysis of deposits on the pistons and cylinder heads has disclosed the presence of more or less road dust and other foreign elements. That clean air aids in carburetion, in that a better mixture is obtained, is conceded, and the presence of dust and dirt does not improve the operation of the carburetor. Many devices have been offered for preventing the entrance of foreign elements into the carburetor, including screens, etc., but a variation is noted in the Lord air cleaner marketed by the Lord Manufacturing Company, Brooklyn, N. Y. It is screenless, oil being utilized to separate foreign elements from the air on its way to the carburetor. The air enters an umbrella shaped opening and, in passing through a chamber containing oil, the lubricant attracts the impurities by adhesion. The air then flows to an expansion chamber, thence through an opening to the air intake of the carburetor. Provision is made for replenishing the supply of oil as well as draining the old lubricant.

Arbeco Glass Lamp.

A novelty in lamp design is noted in the Arbeco, manufactured by the Reynolds-Browne Company, 1312 Michigan avenue, Chicago. It is an all glass lamp constructed both for headlight and side light use, weighs less than the usual metal electrical units and the material should make for easy cleaning as well as for efficiency. While it would appear that a glass lamp would invite easy breakage on a motor car, the maker claims that it is as durable as a metal unit, insofar as service is concerned. Between the reflector and the shell is a vacuum space which serves to prevent heat from within or without from creating undesirable temperatures, and the construction also protects the inner plating of metal that gives the lamp its finish. Inside of the shell or main

Digitized by Google

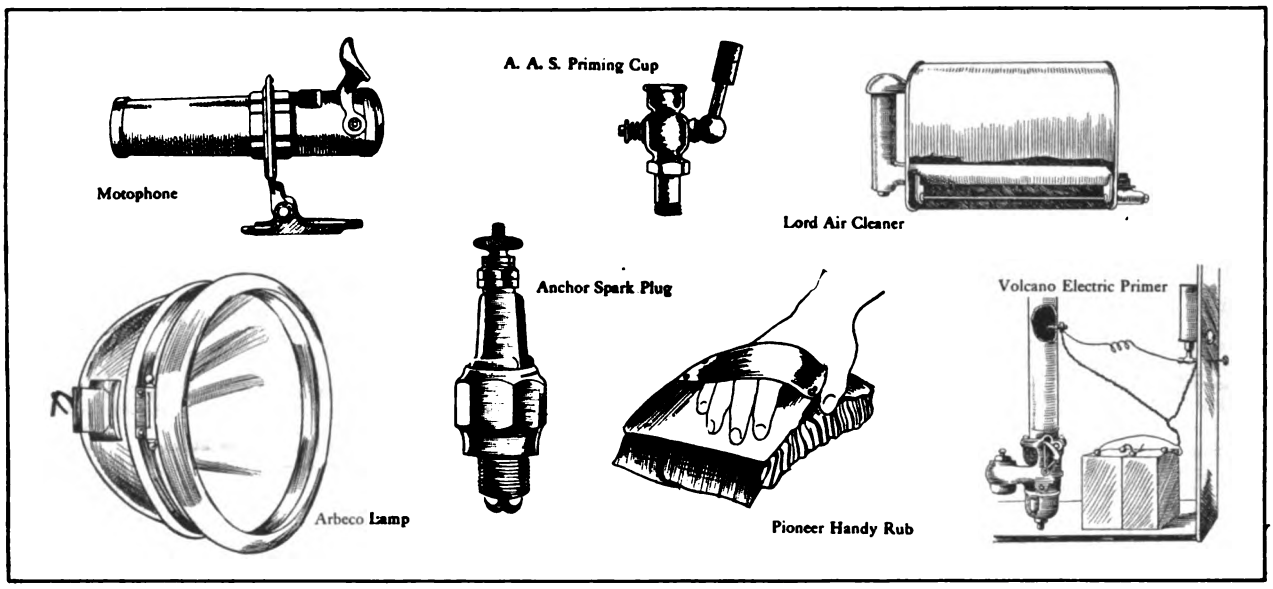
body is plated a layer of brass, nickel or copper, of a color to match the car. The reflector is a true parabola, this being silvered on the inside, where it is protected from atmospheric changes and not affected by cleaning. The only metal used is the door frame and the jamb. A focal adjustment is included, also a wired socket. The Arbeco lamp is made in different sizes to meet requirements.

Anchor Spark Plug.

The Szel Import & Export Company, 359 Broadway, New York City, is marketing the Anchor spark plug, so-called from the design of the central electrode which terminates in two arms, having much the appearance of the flukes of an anchor. Another radical departure from conventional spark plug construction is the method utilized to prevent oil being splashed onto the porcelain, thereby depositing soot and eventually creating a short circuit and faulty operation of the plug. A cap is utilized on the Anchor plug, through which extends the central electrode, but the cap is so designed and located that the high-tension current cannot jump from it to the base of the shell, owing to the high resistance encountered. It is pointed out by the maker that any oil splashing onto the cap would be consumed by the heat of combustion. The electrode is of nickel. The plug is listed at $1.

Pioneer Handy Rub.

In polishing brass with ordinary cloths and waste the hands are more or less soiled by the cleansing material. The Northwestern Chemical Company, Marietta, O., is marketing the Pioneer handy rub, which is a polishing device composed of strips of genuine oil tanned chamois sewed to a canvas back equipped with a practical retaining band for the hand. The maker states that it lightens the work of polishing brass, cleaning glass or the woodwork, and that the material is very durable and imparts a fine polish without danger of scratching the surface treated. It is inexpensive.



Volcano Electric Primer.

The Volcano Electric Primer Works, Virginia, Ill., is marketing a priming device called the Volcano electric primer, which utilizes electricity for vaporizing the fuel and which is easily operated. A small container is located inside the dash and has a line connecting with a small cup like device which is inserted in the intake pipe. Gasoline is supplied to a plate over the cup by the capillary process, a wick being employed to feed the fuel. The capacity of the cup member is very small and is suitably proportioned to make an easy starting mixture. Connected to the plate are two wires from a storage battery or dry cells, and by closing the circuit with the usual push button, the plate is heated, causing the fuel to vaporize. This makes for easy starting of the motor when cold, as not only is the mixture enriched, but it is vaporized by the rise in temperature. It is stated that the dash container has a capacity for about 150 starts without replenishing the supply of fuel. The device is easily installed and the connection may be made to the battery without interfering with the usual wiring plans. It retails for $10.

Springfield Tire Rest.

Tire manufacturers advise relieving the shoes of all weight when the machine is not to be used for any length of time. The Shawver Company, Springfield, O., is producing the Springfield tire rest, which is constructed especially for jacking up cars, although it may be employed for a number of useful purposes. One of the features of the Springfield is that the car may be raised to a height of six inches if desired, or fractions thereof. The rest is sturdily constructed, has a lifting capacity of 8000 pounds, and can be used under cars with wheel diameters of 28 to 48 inches. The adjustments are quickly made and the lever easily operated. The Springfield tire rest comes in sets of four, retailing at $12.50.

B'Co Spark Plug.

The Brown Company, Syracuse, N. Y., is producing a special spark plug for use with the Brown Impulse tire pump made by this concern. The Brown pump is inserted in the spark plug opening and operated by the impulse of the compression stroke. The early types produced were threaded for screwing into the cylinder opening, but with the new plug the work is greatly simplified. The B'Co spark plug has a removable core, which is displaced by a slight turn of a handle. The pump is then inserted in the base or shell member, to which it is secured by a bayonet type of lock, a slight twist fitting and releasing the components. The company makes an attractive offer to owners of the earlier types of Brown tire pumps not equipped with the quick acting device.

V Hot Air Valve.

The benefits accruing from the utilization of heated air in the carbureting of gasoline are well known, and many manufacturers equip their cars with a hot air device. A different application of the principle is noted in the V hot air valve produced by the V Air Valve & Manufacturing Company, 1648 Tremont street, Denver, Col. It comprises a hood like member, which is clamped onto the exhaust manifold; flexible metallic tubing for conveying the heated air, and the V valve. The last named member is screwed into the intake manifold above the carburetor and control of the valve is by a wire cable operated by a lever clamped to the steering column under the wheel. This permits the driver to regulate the amount of air admitted according to atmospheric conditions, etc., also to utilize the control for flushing out the cylinders with fresh air, as when coasting down a hill. The maker states that considerably more mileage is obtained to a gallon of fuel and that further economy is obtained in that at high piston speeds the emergence of fuel from the jet is restricted without affecting the output of the motor. The retail price is $7.

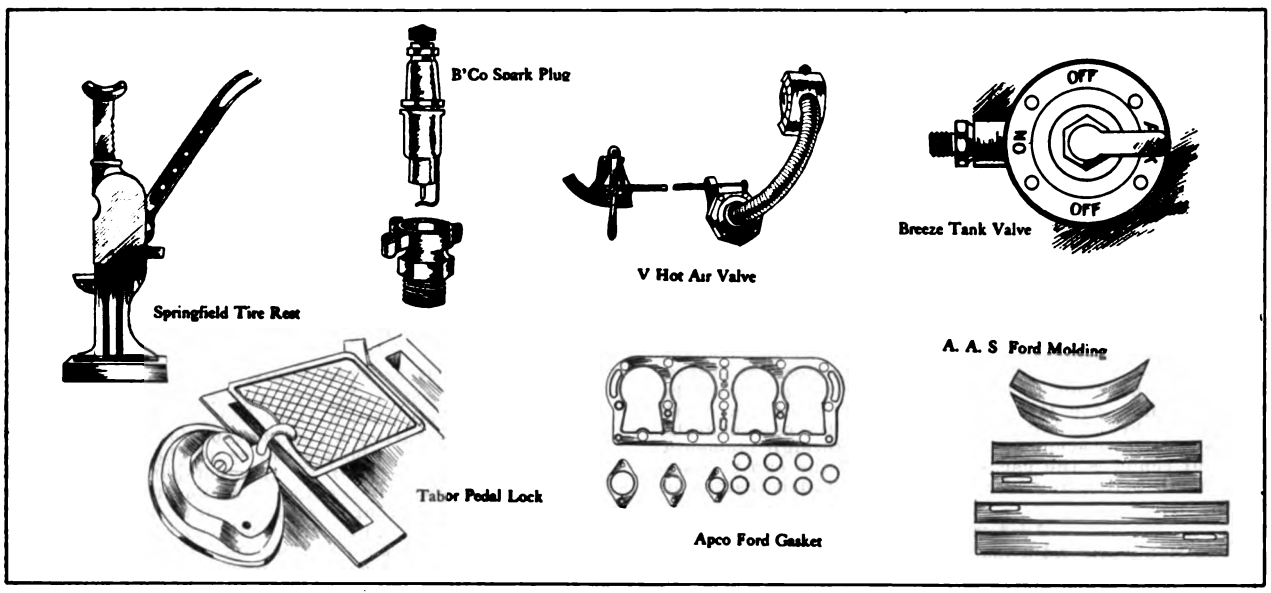
Breese Tank Valve.

The Breeze Carburetor Company, Newark, N. J., is marketing the Breeze 4 in 1 tank valve, which obtains the reserve capacity of fuel without the auxiliary tank in the fuel container. Two outlet levels are utilized in the tank, the service member being slightly higher than the reserve, and according to requirements. Two controls are provided, one for each outlet, also two off positions, connection between the indicating plate and valve proper being made by a rod arrangement. The valve is provided with a gauze strainer, also a screw plug member for cleaning and draining. One of the features of the valve is that it may be locked, preventing use of the car by others than those intended.

Tabor Pedal Lock.

The large number of cars reported stolen has led to the marketing of a number of locking devices, among which is the Tabor pedal lock, manufactured by the Loveley Sales Company, Detroit. It is a mechanical arrangement, which comprises a plate member having a lock and being fitted to the toeboard. Included in the mechanism is a hook which may be swung inward and locked, thereby retaining the clutch pedal, as shown in the illustration. With the clutch out and pedal locked, it is obvious that the car cannot be operated under its own power. The equipment includes a high grade lock with removable key and the construction is very compact. It

Digitized by Google



is stated that it does not interfere with the normal use of the clutch pedal.

Apco Ford Gaskets.

In fitting new gaskets to the intake, exhaust and water manifolds care should be taken to employ a high grade material and one that will resist the action of heat and water. While gaskets may be made, considerable time is saved by utilizing those designed for the motor. The Auto Parts Company, Providence, R. I., maker of Apco specialties, is marketing a complete set of gaskets for the model T Ford, including the cylinder head member, inlet, exhaust, cylinder head flange, inlet and exhaust water, and transmission drain plug. These gaskets are made of the very best material and carefully constructed. They are guaranteed to fit, and the complete set sells for 75 cents.

A. A. S. Ford Molding.

The American Auto Supply Company, 1741 Broadway, New York City, is marketing a molding assembly for model T Ford cars, which consists of a complete set of mahogany finish moldings for placing on the top edge and doors of the body. These pieces come cut to the exact length to fit and screws and washers are supplied with each set. It is pointed out that the moldings can be fitted in about 15 minutes and that they add materially to the appearance of the car, as well as protect the body material. The A. A. S. Ford molding is made for the 1912 and 1913 runabouts and touring models.

Parker Vaporizer.

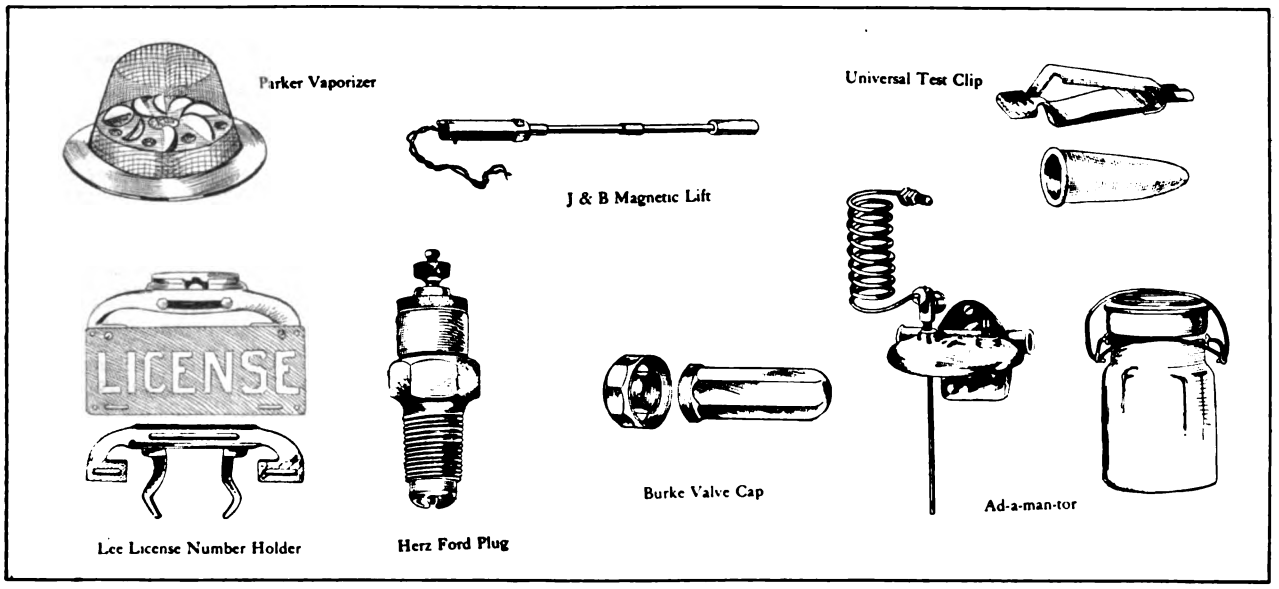
The Parker Manufacturing Company, Broad street and Ridge avenue, Philadelphia, is marketing the Parker vaporizer, which is inserted between the carburetor and the intake pipe, where it forms its own gasket. It is designed to break up any particles of raw fuel not vaporized by the carburetor, and convert these into a useful mixture. This is accomplished by means of a rotary motion imparted inside the conical mesh screens, and the maker states that in tests it has saved over 25 per cent. in fuel, and that it makes for a more flexible motor. It retails for $3.

J & B Magnetic Lift.

The J & B Manufacturing Company, Pittsfield, Mass., well known maker of ignition specialties, has brought out a useful as well as practical tool for removing parts, such as bolts, nuts, pins, etc., that are dropped into the engine pan or other places not easily accessible with the hands, etc. It comprises an electromagnet in sections, having a handle containing a switch for opening and closing the circuit between the device and the battery. These sections are so constructed as to carry the current from the handle to the magnet end without wires, and as the electromagnet is always at the end of the tool, maximum lifting power is provided at the service end. The device is designed both for the repair shop and owner and with it metal chips may be removed from the transmission, etc., and the maker states that it has sufficient power to lift valves from the cylinder heads. The tool weighs complete but 12 ounces, has a lifting power of 12 pounds, consumes but half an ampere of current, and may be utilized with any six-volt battery. It sells for $3.

Universal Test Clips.

R. S. Mueller & Co., 423 High avenue, Cleveland, O., is manufacturing the Universal test clip, which is designed for use with testing devices where a ready means of making a quick or test connection is desired. It is also of service in charging batteries and the maker states the clips will carry 10 to 12 amperes continuously without heating. The construction of the device is shown in an accompanying illustration and it will be noted that the nose is thin, making for convenience in tight places. It is stated that the "bite" is positive, that the clip will stand straight out wherever applied and that it will not sag down and make contact with adjacent lugs or terminals. The outer members are No. 20 gauge, semi-hard,



Digitized by Google

cold rolled steel with inner construction of blued spring steel, with the point of application near the jaws. The wire is secured to the heel of the clip and soldered, after which the lips are compressed, making a tight connection. A rubber nipple is fitted, preventing shocks.

Lee License Number Holder.

The William O. Lee Company, Port Huron, Mich., is manufacturing the Lee license number holder, which is made adjustable to fit all sizes of filler caps, it being designed to be attached to the radiator. The retaining clamps slide in a slot and are locked by means of bolts and nuts. The holder is also adjustable to plates of varying dimensions. It weighs six ounces, comes polished and sells for 75 cents.

Burke Valve Cap.

The Burke Valve Cap Company, Cleveland, O., is manufacturing the Burke valve cap, which differs materially from the conventional device, in that it may be removed and replaced quickly. The cap proper, instead of screwing on to the body of the valve stem, threads into the retaining nut, the last named member having a small number of threads, but sufficient to hold the cap securely, as well as to prevent the entrance of foreign elements. The nut replaces the usual member and the cap is made hexagonal, permitting of the use of a wrench instead of pliers.

Ad-a-man-tor.

The Hendricks Ad-a-man-tor Company, Grand Rapids, Mich., is marketing the Ad-a-man-tor, which differs materially from other motor cleaning and priming devices, as will be noted by an accompanying illustration. In the first place the vessel containing the cleansing and priming fluids is of flint glass and resembles the preserve jar in shape and construction. It has the wire clamp for securing the top member, and the method of operation is similar to that of the fruit jar. The top part is secured on the hood side of the dash and an operating disc or button is located on the driver's side. Extending into the container is a small tube through which the fluids are drawn by the suction of the piston. Connecting with the tube is suitable piping, which is led to the intake manifold just above the carburetor. Two jars accompany each equipment, one being utilized for the cleansing material, which is said to effectually remove carbon and other deposits from the cylinders. The second jar is utilized for carrying a priming mixture. One of the features of the system emphasized is the ease with which the containers may be changed. The Ad-a-man-tor retails for $10.

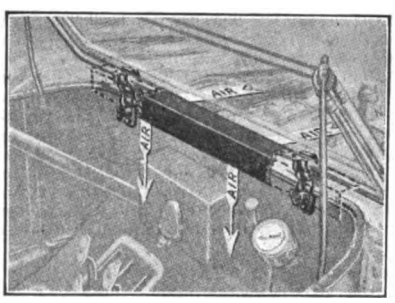
Herz Ford Spark Plug.

Herz & Co., 295 Lafayette street, New York City, maker of the well known Herz Bougie Mercedes spark plugs, is manufacturing a special type for model T Ford automobiles, which embodies the same characteristics of the other plugs produced by this company. The Herz plug has a double, unbreakable stone insulation, blue enamelled, and the four sparking points are of a platinum alloy. One of the several features of the new plug is that it is held to be self-cleaning. It carries a year's guarantee. It is stated by the maker that excellent results are obtained with this plug in the Ford motor.

EXCELSIOR VENTILATOR.

C. B. Wattles, Providence, R. I., Manufacturing Adjustable Type for Model T Ford Cars.

C. B. Wattles, 441 Butler Exchange, Providence, R. I., is introducing the Excelsior adjustable ventilator for model T Ford cars, this being shown in an accompanying illustration. It is secured to the dash and admits fresh air to the forward compartment, where more or less heat is present when the motor is operating. The ventilator may be adjusted to an open or closed position in a few seconds and from the seat. All air entering is deflected away from the occupants of the front seat as shown in the illustration by the arrows. The ventilator is constructed of high grade material, finished in black enamel and can be attached in a few minutes. The retail price is $3. The maker has an interesting proposition for dealers, particulars of which will be forwarded upon request.



Excelsior Adjustable Ventilator.

APCO FORD SPECIALTIES.

Compound for Leaky Radiators and Hood Cover Included in New Price List Issued to the Trade.

The Auto Parts Company, Providence, R. I., well known manufacturer of Apco specialties for model T Ford cars, is issuing a new price list to the trade, and included among the accessories listed are the Apco radiator compound and Apco hood cover shown herewith. The first named is a chemical preparation especially put up for the company and is employed for stopping leaks in the cooler. It is mixed with the water and when the solution is circulated, upon coming into contact with the air it hardens, forming a durable cement. There is nothing in the compound to injure the components of the cooling system and it is easily and quickly used. Each can contains enough to treat two Ford radiators and retails for $1.

Apco Radiator Compound and Ford Hood Cover.

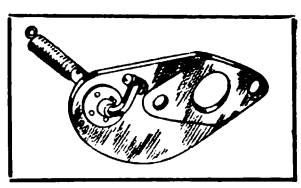
The Apco hood cover is a high grade construction, fitting over the hood and radiator and being retained by catches. It is made of a high grade dull finished rubber cloth, and being padded by three thicknesses of felt, retains the heat for a considerable period, preventing freezing of the water when the car is exposed to temperatures of 32 degrees Fahrenheit and below. It also serves to protect the motor and spark plugs from water, etc. The cover is provided with a curtain which rolls up and is held in place by curtain catches. This permits of proper cooling on mild days. The Apco hood cover retails for $5.

The company is also marketing a priming plug which is the standard Apco plug with a petcock threaded into the shell, permitting of the admission of gasoline or other priming fluids without removing the plug. This member sells for $1.

NYCO ACCELERATOR AND POWER ADDER.

New York Coil Company Brings Out Attachment for Model T Ford Motors.

The New York Coil Company, 338 Pearl street, New York City, well known maker of ignition devices, announces a new attachment for model T Ford cars which is stated to bring larger returns than with any other accessory designed for this type of machine. It consists of a hollow chamber made of nickel steel, which is .25 inch in thickness, registering with the opening in the inlet pipe and carburetor, as well as the two flange bolts of these parts. One end of the device conforms to the shape of the carburetor flange, but the other extends a distance beyond the flange and contains a peculiarly arranged valve of approximately the same area as the intake pipe opening.



Nyco Accelerator and Power Adder.

Air passages are formed in this valve in such manner that when the valve is unseated by means of a steel wire running to a pedal located in the rear footboard, air is admitted to the inlet pipe, as no obstructed passage is provided between the valve and the intake pipe connections. The valve is supported on a rod, which is carried by a valve guide on the opposite side of the instrument.

Two springs of different sizes are employed, the first a light member, its function being to keep the valve normally seated; the second a heavier spring, which comes into action only when the pedal is depressed more than normally when a hill is to be descended, during which time the device allows the cylinders to be completely filled with pure air, and also serves to effectively hold the car in check. The main object of the device is to supply pure air to the ever present over rich mixture supplied by carburetors at speeds ranging from 10 to 30 miles an hour.

The maker states that the Nyco will save 25 per cent. gasoline and add vim, snap and quick getaway to the Ford motor, due to its preventing an over rich mixture; and that the formation of carbon is prevented and a cool engine is assured even when the car is operated under

Digitized by Google

the most strenuous conditions. The device has been given a thorough testing and was designed expressly for the Ford motor by automobile engineers of long experience. It is stated that it is the only device of this nature which can be attached without drilling, tapping or even removing the inlet pipe. The list price with pedal is $5, and it is sold with a positive guarantee that the purchase price will be refunded if not satisfactory. The maker, the New York Coil Company, will be pleased to forward instructive literature to all readers of the Accessory and Garage Journal.

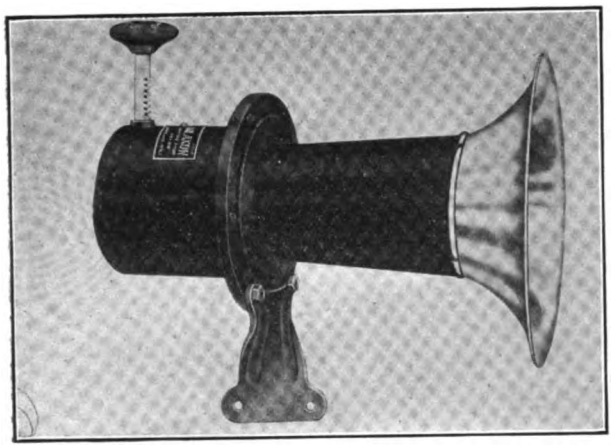
ADDITION TO KLAXON FAMILY.

New Horn Is Operated by Hand and Has Similar Note to Well Known Signal.

The Lovell-McConnell Manufacturing Company, Newark, N. J., maker of the well known Klaxon horn, announces a new signal which is manually operated. It is not entirely new, however, being a development of the original hand Klaxon, which was manufactured in 1909, and since then gradually discontinued, owing to the enormous demand for Klaxons operated by electricity.

The new member of the family is operated on the Klaxon principle of a vanadium steel diaphragm vibrated by a rotor or ratchet wheel. In the case of the electric horn this ratchet wheel is rotated by an electric motor; in the new horn, by a train of gears that attain a high speed under pressure on the pushrod. The hand signal has a true Klaxon note and is sold under the Klaxon guarantee of permanent satisfaction. It retails for $10.

Deliveries will begin Dec. 1. The same high grade material and workmanship characteristic of the products



Showing the Latest Member of the Klaxon Family, a Hand-Operated Horn, Embodying Klaxon Principles.

of the Lovell-McConnell Manufacturing Company are incorporated in the new product.

ISSUES PREFERRED STOCK.

United States Rubber Company Offers Stockholders Opportunity to Purchase $9,422,000 at Par.

The directors of the United States Rubber Company, New York City, have voted to issue to the stockholders at par $9,422,000 of the preferred stock, which is equal to 10 per cent. of the present outstanding issue of capital stock. Samuel P. Colt, president of the company, said that the recent outlays in the enlargement of the company's plant have made necessary the raising of new capital. He added that the business of the company for the fiscal year ending Oct. 1, both in amount and profits, was fully equal to the returns for the corresponding period of 1912, which exceeded that of any previous year. At the same meeting Nicholas F. Brady was elected a member of the executive committee.

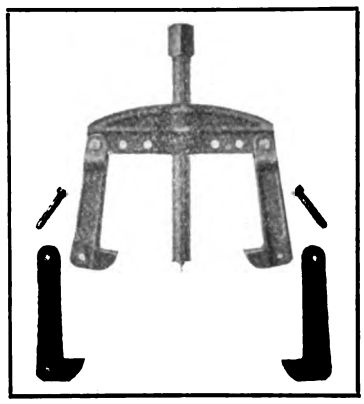
TO REMOVE TO BENTON HARBOR.

Fred G. Bremer has become president of the Universal Manufacturing Company, Racine, Wis., and the concern has been merged with the Bremer-Wilson Company of Chicago, Ill. This transaction gives to the Wilson-Bremer interests a factory in which to produce its engine starters, locks, pliers, etc. A site has been secured in Benton Harbor, Mich., and as soon as arrangements are completed the Universal company will be removed to that place.

CRANE WHEEL PULLER.

An Improved Tool for Removing Car or Flywheels, Gears, Sprockets, Etc., Constructed from High Carbon Steel.

One of the most useful tools in the garage and repair shop is a wheel puller that can be adapted to any type of machine. The Crane Puller Company, 54 Lake street, Arlington, Mass., maker of the Crane wheel puller, is now producing an improved combination wheel and gear puller, illustration of which is shown. The tool is drop forged from a high carbon steel and the screw is cut by special machinery and completely case hardened. The arms are constructed of a high grade material and, as will be noted, the puller may be adjusted to remove flywheels, gears, transmission shafts, camshafts, sprockets, collars, pulleys, couplings, etc. Descriptive matter and price list of the Crane wheel pullers will be forwarded on request.



Crane Patent Wheel Puller.

WILL REPRESENT WILLYS.

Claire L. Barnes to Assume Responsible Position with Overland Concern in January.

Claire L. Barnes will on the first of the new year become the personal representative of John N. Willys, head of the Willys-Overland Company, Toledo, O., and prominently interested in a number of other automobile concerns. Mr. Barnes is well and favorably known in the trade, and attained distinction as founder and head of the firm of Claire L. Barnes & Co., Detroit, direct factory representative of a number of concerns making automobile parts.

EXCEL AUTO JACK.

Crane Puller Company's Quick Acting Tool That Is Mounted on Rollers and Operated by a Lever.

Any tool or equipment saving time and labor means economy in the garage and repair shop. The Crane Puller Company, Arlington, Mass., is building the Excel auto jack, a very practical tool that can be easily and quickly operated without stooping, as is necessary with conventional types. As shown in an accompanying illustration, the Excel jack is operated by a lever, the length of which makes for easy and convenient operation.

One of the qualities of the jack is that it can be adjusted instantly to any work. It may be said to be a double jack in that one adjustment permits of its being placed under anything not more than five inches above a level, while another position will give a lift from a height of 20 inches. The lifting capacity is four inches in two seconds. The smaller illustration shows the jack adjusted for use where the clearance is small, while the larger illustrates the maximum. It may be operated at any angle, and a toe or extension is used where the clearance is small. The Excel jack has a capacity of 8000 pounds. It is constructed of low carbon steel with case hardened pins. It is built for hard work and is fully guaranteed. Being mounted on wheels it is moved easily. The maker claims it will save its cost in a week on the washstand alone.

The Excel Auto Jack.

PRODUCING MULTIBESTOS BRAKE LINING.

How Asbestos Is Woven into a Homogeneous Mass and Treated to Withstand Friction Stresses at New Factory of Standard Woven Fabric Company.

(By C. P. Shattuck.)

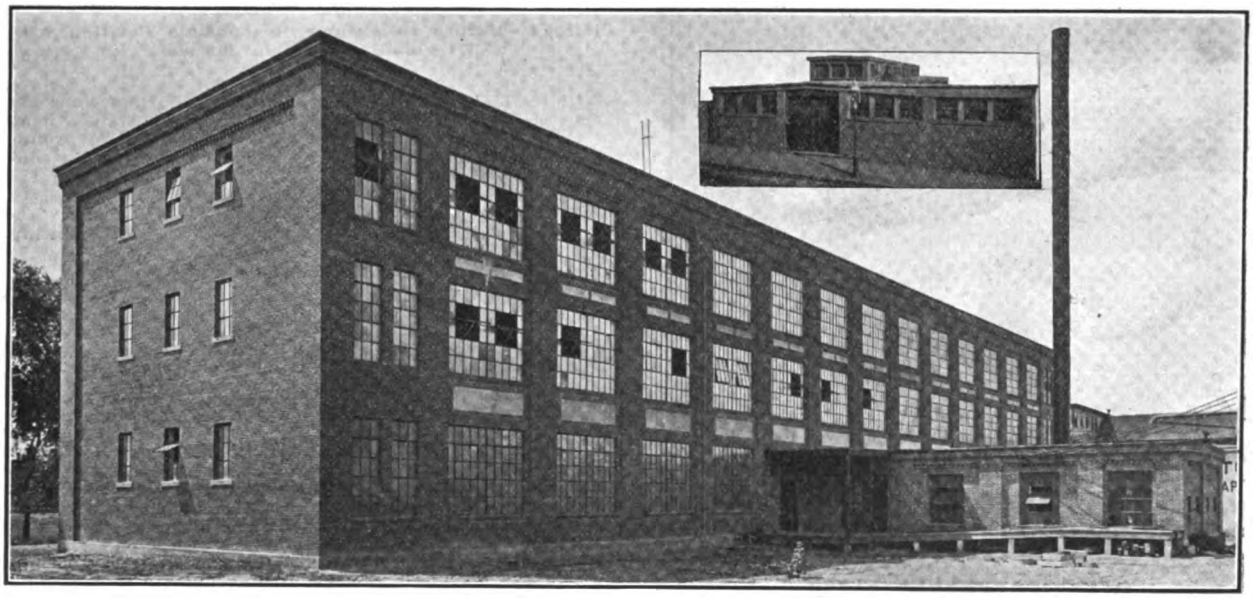
THERE is no component part of the motor car, unless it be the steering mechanism, that is more necessary to its safe operation than the brakes. That designers attach considerable importance to these members is emphasized by the fact that at least two independent sets of brakes are provided, either of which when properly constructed and adjusted is capable of locking the wheels. The efficiency and dependability of modern brakes—which may be said to receive too little attention from the average user—are due to the careful and scientific study and development of the friction material, or brake lining.

Few motorists realize the energy which must be absorbed before a machine is brought to rest after being in motion. If a car be set in motion by the power of its motor and the energy be cut off, it will not come to a stop until this momentum is overcome by the friction of its bearings, the rolling friction and air resistance.

The capacity of a brake is dependent upon the total area of the surfaces in contact, the pressure per square inch with which they are held, the velocity of the rubbing surfaces and the coefficient of friction. The durability of the material depends to a great extent upon the temperature it attains, and this in turn is influenced by the pressure required to resist the motion of the rubbing surfaces.

The early designs of brakes were of the metal-to-metal type, but this construction is not favored, because a certain amount of lubricant is necessary to prevent cutting of the surfaces and heating, and the oil causes a decided loss in efficiency.

The very high heat resistance of asbestos early attracted the attention of engineers as a possibility for a friction material, but difficulties were experienced in producing a homogeneous mass; one that would not disintegrate, glaze or present uneven surfaces. Among those who gave these problems serious consideration was the Multiple Woven Hose and Rubber Company, Worcester, Mass., which concern was engaged in the manufacture of solid multiple fire hose fabrics and solid cotton belting. The difficulties were ultimately overcome by the construction of special looms and the treating of the asbestos fabric with a compound, resulting in the production of Multibestos, a trade name well known throughout the automobile industry.

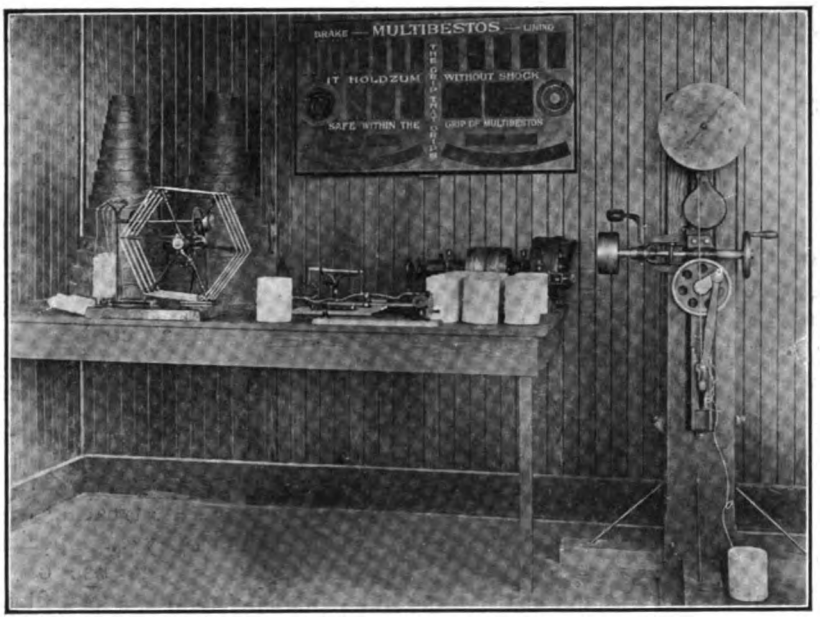


New Factory of Standard Woven Fabric Company, Framingham, Mass., Maker of Multibestos Brake Lining—Some Idea of the Enormous Growth of Business May Be Obtained by Comparison with Worcester Plant, Seen in Insert.

In March, 1911, the Standard Woven Fabric Company was incorporated under Massachusetts laws and in April of the same year took over by purchase the business of the old concern.

The company began operations in a brick building at 7 Summer street, Worcester, Mass., the two floors and a basement providing about 12,000 square feet of floor space. Shortly after, Multibestos brake lining was offered to the trade. Technical tests and actual service demonstrated its efficiency and durability and in 1912 the demand for the material assumed such proportions that it was necessary to add a second plant, this being located on Arch street and being known as the brake lining factory. In it was the machine shop, where the special looms for

Digitized by Google



Section of Testing Room Where the Asbestos Yarn Is Tested for Tensile Strength, Weight, Twists, Etc.

weaving the yarn were made and assembled.

The business grew rapidly, showing an increase of fully 400 per cent. in two years, and the capacity of the Arch street plant proving inadequate, it was found necessary to provide for increased facilities and a new factory. After a thorough investigation it was decided to locate at Framingham, Mass., on the Boston & Albany railroad. The new building was started about Dec. 1, 1912, and the removal of machinery from the two Worcester factories was completed Aug. 1. The manufacture of Multibestos brake lining, multiple woven fabrics and solid woven cotton belting was resumed shortly after.

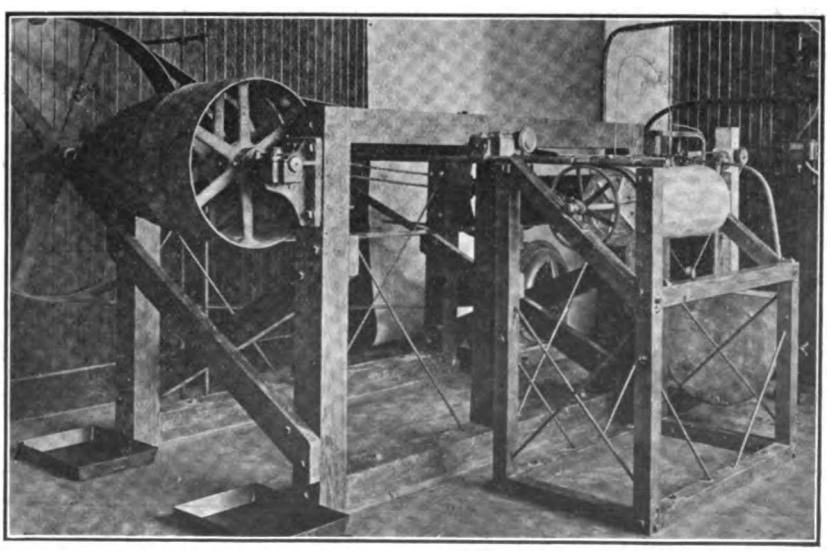
The new factory provides 50,000 square feet of floor space, is pleasantly located, and is designed and equipped to overcome the many problems of quality production. It exemplifies the value of scientific methods of manufacturing and it is a structure in which the efficiency of the manual worker is developed to a high degree, in that ample light and pure air are provided in the rooms. No matter how warm the day, the difference in the temperature and quality of the air upon entering the building is very noticeable. A certain temperature and humidity are maintained, summer and winter, throughout the plant, by the Sturtevant Carrier Air system, which may be termed an air laundry, in that the atmosphere is washed of all impurities, saturated with moisture, forced to each room, drawn from each department, and again washed. By this method any predetermined temperature may be maintained.

The building itself is of reenforced concrete and brick construction, fitted with sprinklers throughout. The ground floor is divided, one-half being utilized for the offices, laboratories, testing rooms, etc., and the remainder for the stock and shipping departments, and winding rooms. The other floors are devoted to the weaving and treating departments and machine shop. Steam is supplied by a Robb-Brady marine type boiler of 150 horsepower capacity. As all of the units are driven by direct connected electric motors, and the building throughout is lighted by electricity, a large generating set will soon be installed.

The process of making the 90 to 95 per cent. asbestos yarn into a homogeneous mass and treating it without injuring the original vitality of the material is an interesting one. The asbestos is mined in Canada and spun into a three-ply yarn having two strands of brass wire and wound onto reels or spools, according to specifications of the Standard Woven Fabric Company, which hopes soon to manufacture its own material from the raw products.

The yarn is tested for tensile strength, weight and number of twists, by machines designed for this work and shown in an accompanying illustration. After testing for tensile strength, the material is placed in the twisting machine, which determines accurately the number of twists to a three-inch strand, a factor making for strength of the material. It is next wound onto a reel, which mechanically indicates on a dial the number of yards of the material to be weighed. These tests are conducted carefully and the limits are very close.

From the testing room the yarn goes to the winding room, where a special machine is employed for winding it onto tubes. This machine may be said to handle the delicate material with



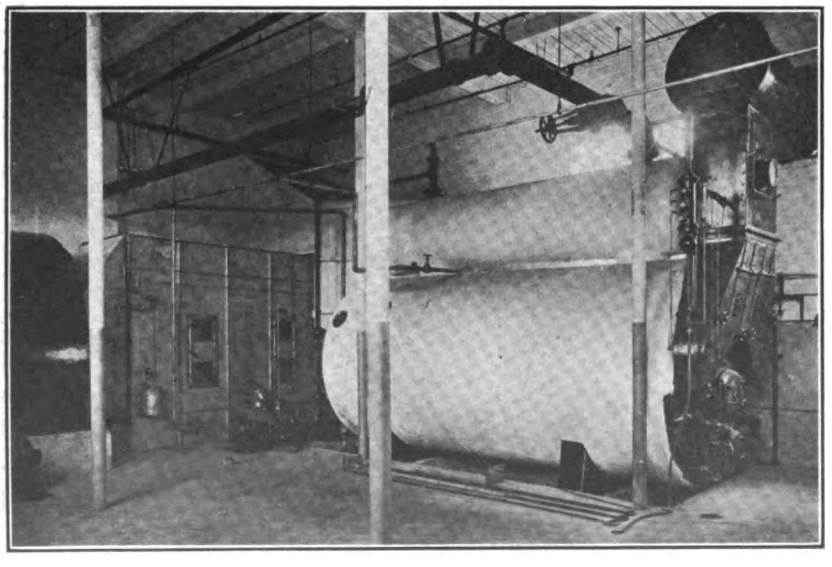
Machine Designed by Chief Engineer E. E. Waite for Testing Brake Linings —The Same Conditions to Which Linings Are Subjected in Service Can Be Produced Accurately.

Digitized by Google

A Corner of the Shipping Room, Showing Various Sizes of Multibestos Brake Lining Awaiting Shipment.

gloves, in that the yarn is wound without loss of the fluffy asbestos.

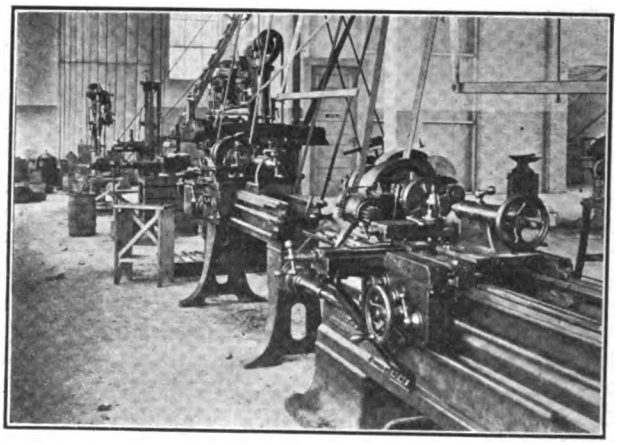
One entire floor is devoted to the looms which weave the yarn into compact form and into the shapes and thicknesses shown in an accompanying illustration. The weaving rooms are accessible only to the officials of the company and certain employees, as the machines embody valuable features not found in other looms, which produce a brake lining retaining non-glazing, non-granulating qualities under the most severe conditions of service. The efficiency of these looms is such that the yarn is woven with slight loss of material, and production is aided by maintaining the proper moisture and temperature. Some idea of the capacity of the machines may be obtained from the dimensions of the material, Multibestos being produced in thicknesses of .125, .15625, .1875, .25, .3125, .375 and .5 inch, and in widths varying by quarters from one inch to eight. It will not be long before looms will be operating, producing these goods in the solid weave up to 20 inches width.



Power Is Supplied by a Marine Type of Boiler of 150 Horsepower Capacity—A Certain Temperature and Humidity Are Maintained Throughout the Plant by the Sturtevant Carrier Air System (Shown at the Left), Which May Be Termed an Air Laundry.

The yarn fed from the tubes into the looms presents an appearance similar to a maze of white wires, and emerges in the form of a white tape, which is wound on special reels. Each machine has a capacity of over 1000 feet daily, and some idea of the annual output of the company may be gained by the statement that if the brake lining were made into a continuous length, it would reach over 1000 miles, or approximately from New York City to Chicago by the shortest road route.

From the weaving room the lining is taken to the treating department, where by a special process, involving the use of a chemical compound which permeates every fibre of the fabric, the material is rendered heat, dust,



A Portion of the Machine Shop Where the Components of the Special Weaving Looms Are Constructed.

water, oil and grease proof. After passing through the various processes, the lining is fed through what is termed a gravity elevator, each length passing through a sized compartment to the floor below, where the trade mark of the company, Multibestos, is stencilled with aluminum letters. The machine was designed and constructed in the machine shop of the company, and in addition to marking the material, measures and reels it into 100-foot lengths. These rolls are next taken to the stock room and made ready for shipment, a spur track leading to the factory providing excellent facilities.

In addition to producing standard sizes of Multibestos brake lining, the company manufactures special sizes to order. One of the specialties produced is a special lining for Ford cars, the Ford Motor Company specifying a material having

Digitized by Google

the same qualities as Multibestos, but without the brass wire. Another feature is that this lining must not be affected by oil, and the chemical treatment of Multibestos Ford Special fully meets this requirement.

The Standard Woven Fabric Company has in the process of construction machinery for producing Multibestos facing for the various forms of clutches employing a dry friction material, and the plans include the manufacture of standard and special sizes. The flexible qualities of Multibestos make it adaptable for other than service with motor cars, it being utilized for clutches in mill transmission equipment, mining machinery, cranes, hoists, elevators, presses, etc., where a material having a high coefficient of friction is desirable.

One of the most interesting departments in the factory is the testing room, in which is located the machine utilized for testing brake lining, and which is shown for the first time in an accompanying illustration. It is the creation of

The Offices of the Standard Woven Fabric Company Are Spacious and Well Lighted.

E. E. Waite, the chief engineer of the company, and on it can be produced exactly the same conditions to which brake lining would be subjected in actual service.

These include, as previously pointed out, the coefficient of friction, the pressure required to resist motion of the contacting surfaces, speed, temperature, chatter, etc.; in fact, those factors entering into the efficiency and durability of the friction material. The action of water, oils and greases is noted by immersing the band carrying the lining in these liquids. Any desired speed may be produced, equalling that of an automobile travelling at a few miles an hour to the maximum, and the action resulting from the gradual application or locking of the brakes is charted on a revolving drum.

Throughout the factory is noted every modern convenience tending to promote the quality of Multibestos brake lining and other products of the concern, and a large force of machinists is employed in executing new designs of looms and

George D. Moore, President, at Left, and Arthur H. Burdick, Treasurer and General Manager, at Right.

machinery by which the output may be augmented, as the business is steadily increasing.

The Standard Woven Fabric Company has prospered to such an extent that since its incorporation the annual dividend of six per cent. has always been paid on its outstanding preferred stock. The capital consists of $200,000 preferred and $200,000 common stock, both carrying a par value of $100 a share. The stock is closely held, largely by those directly connected with the management of the affairs of the company. At no time has the stock been placed in the hands of underwriters, but has always been disposed of by the directors and officials. Quite a block of the common stock still remains unissued, and this will be held in reserve to provide additional working capital or further extensions, if required. The success of the company is attributed to the use of the highest grade of material and the most rigid inspection of it, and the workmanship entering into the construction of Multibestos and the other products.

The officers of the Standard Woven Fabric Company elected at the time of the organization are the same as today and are as follows: President, George D. Moore, Worcester, Mass.; vice

Edwin E. Waite, Factory Manager, at Left, and T. J. Daley, Secretary, at Right.

Digitized by Google

president, W. B. McSkimmon, Boston; treasurer and general manager, A. H. Burdick, Framingham, Mass.; secretary, T. J. Daley, Worcester, Mass.; factory manager, E. E. Waite, Framingham, Mass. The board of directors comprises the above-named officers and William Lowell Putnam, J. H. Drury, Stoughton Bell and Ashton L. Carr, all of Boston.

PROF. HOSFORD IS REAPPOINTED.

Well Known Instructor Will Head Boston Y. M. C. A. Automobile School for Another Year.

It does not come exactly as a surprise to the many friends of Prof. Winthrop C. Hosford, manager of the Boston, Y. M. C. A. automobile school, to learn that he has been appointed for another year. This school, which enjoys the distinction of being the first of its kind to be established in this country, has a reputation which places it in the very front rank among institutions of this character, and a large measure of credit is due Prof. Hosford.

Prof. W. C. Hosford, Manager, Boston Y. M. C. A. Automobile School.

Born in New Britain, Conn., he entered a machine shop at the age of 16. During the next few years he studied machine drawing and designing evenings. He became identified with the New England Motor Carriage Company in 1898, thus assuming a place among the pioneers of the industry, and has been connected with the automobile field in some capacity or other ever since that time.

For several years he served as chief instructor of the Boston Y. M. Y. C. automobile school, previous to his promotion to become manager early in 1912. Several thousand men—chauffeurs, operators and others connected with the industry in many different capacities—can testify to his skill as a teacher and to his genial personality.

Prof. Hosford is not only a hard worker, but studies continuously, keeping abreast of the improvements and developments of the modern motor vehicle, no matter what the type. In the school he is assisted by 16 instructors, each of whom is trained and experienced in his respective branch. In this manner the highest possible standard is maintained at all times.

DESIGNING NEW ELECTRIC WAGON.

Neracher Now with Chicago Electric Car Company, Which Will Be Removed to Toledo.

Carl A. Neracher, who has been chief engineer of the Willys-Overland Company, Toledo, O., has acquired an interest in the Chicago Electric Car Company, Chicago, Ill., and is to become identified therewith. Control of the Chicago concern has been acquired by strong financial interests and it is believed that the name will soon be changed and the business removed to Toledo.

An office has already been opened in the Ohio building, Toledo, and Mr. Neracher has commenced work on a new model light delivery wagon which will sell at a price well below $2000. The body work will be done at the plant of the Milburn Wagon Works, Toledo, and it is reported that the new car will be on the market in January.

The auction sale of the personal property, equipment, materials and real estate of the Schacht Motor Car Company, Cincinnati, O., brought a little over $60,000 out of an appraised value of $175,000.

MILLER'S ADVANCE CATALOGUE.

Pioneer Accessory Dealer Plans to Distribute 100,000 Copies at the Various Automobile Shows.

Dealers and agents throughout the country have come to realize the importance of Chas. E. Miller as a representative accessory house. Most of them are acquainted with the history of this pioneer concern, since Miller was selling accessories for automobiles almost as soon as there were any automobiles in this country. He graduated from the bicycle field in somewhat the same manner as many of the manufacturers and dealers.

The business has grown rapidly, the head of the concern anticipating the demand in every line, first as a dealer, then as manufacturer, jobber, exporter and importer. The headquarters are located at 97-103 Reade street, New York City, where all the details of the business, which now includes 14 branches in 13 cities and nine states, is supervised personally by Mr. Miller.

These branches are located as follows: New York City, 924 Eighth avenue and 2782 Broadway; Brooklyn, N. Y., 1421 Bedford avenue; Buffalo, N. Y., 824 Main street; Albany, N. Y., 135 Central avenue; Boston, Mass., 202-204 Columbus avenue; Springfield, Mass., Bridge and Dwight streets; Hartford, Conn., 274 Trumbull street; Detroit, Mich., 227-229 Jefferson avenue; Cleveland, O., 1829 Euclid avenue; Philadelphia, Penn., 318 North Broad street; Atlanta, Ga., 259 Peachtree street; New Orleans, La., 601-603 Baronne street; Newark, N. J., 274 Halsey street.

Particular attention is drawn to this concern at this time through the appearance of the 1914 advance catalogue, No. 27, 100,000 copies of which have been printed for distribution at the forthcoming automobile shows. The cover treatment is especially indicative of the extent of the business, automobiles, motorcycles, aeroplanes and motor boats occupying a prominent place in the design. Several new lines are presented in the latest catalogue, and, inasmuch as the Miller service is available in every section of the country through the use of the parcel post, no dealer will feel that his supply of information concerning the accessories, supplies and fittings now in the market is complete without securing a copy.

J. A. Vail, who for the past eight years has been general manager of the Fairbanks-Morse Manufacturing Company, Beloit, Wis., has been elected chairman of the executive board of the Maxwell Motor Company, and has gone to New York to assume his new duties. He succeeds J. C. Brady, son of the late Anthony N. Brady.

ABSOLUTE TIRE PROTECTION
GIVEN ONLY BY THE
Hopewell Tire Case
It prevents any water entering the spare tire either from rain or hose used in washing). Water rots the fabric and causes blowouts.
$3.00 to $4.00 according to size.

and we pay the postage. Made to repair tires on the rim, a great tire saver. Also repairs tubes.

VANDERPOOL CO.

Springfield, Ohio

The Atwater Kent Ford Ignition

does more than eliminate the frequent and troublesome adjustment of the Ford coils.

The Atwater Kent Ignition assures perfect synchronization at all speeds, eliminating preignition and overheating—starts easily with a quarter turn of the crank and frequently without cranking by means of the starting button on the coil.

Effects a saving in gas, wear and vibration by enabling the motor to run slowly while the car is standing and run as smoothly "on high" at four miles an hour as at thirty or fifty.

The Atwater Kent will, in addition, wonderfully increase the power, speed, flexibility and hill-climbing ability of the Ford car, and gives superior results and costs less than half that of the high tension magneto.

It consists of the Unisparker or distributor elevated to a convenient and accessible position which takes the place of the Ford timer and a single non-vibrating coil is installed in place of the four vibrating coils.

It is easily installed by any one who can time a motor—no holes to bore—a screw driver and wrench are the only tools required.

Price complete with hand-operated switch $28.00—foot-operated switch $2.00 extra.

Write at once for Circular "L" and trade prices.

AKRON-WILLIAMS

Proved-By-Test Equipment

MEN, the first essential in the Tire Repair Business is first quality, proved-in-practice Equipment.

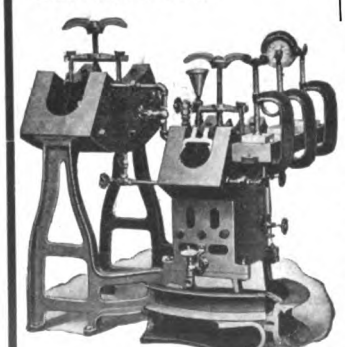
You can't afford to experiment with uncertain Equipment. That is apt to ruin your business, ruin your customers' tires and tubes, and cost you a new Equipment.

You take no chance when you buy Akron-Williams—you are not experimenting. Akron-Williams Repair Equipment and Tools are all "Proved-By-Test," before we offer them to the trade.

Some Akron-Williams Users

Firestone, Goodyear, Diamond, Hartford, Republic, Pennsylvania, Revere, Consolidated, Empire, U. S. and Hood are some of the 27 leading Tire Makers using our equipment.

You are safe in using what these makers use.



One of a dozen styles

Localized Steam

The three distinct and separate steam chambers of Akron-Williams Repair Outfits is an important feature. That insures heat just where wanted, prevents over-curing, and insures efficient work.

Let's Talk It Over

If you are going to enter this profitable business—Tire Repairing—write us and let's talk it over. There are many reasons why you should buy Akron-Williams equipment, and we'll be glad to show you why.

Get our valuable book—Catalog No. 12. It's full of expert information. Write for it now.

Cold Weather Increases Carbon Deposits!

Winter Driving Facilitated

Cold weather calls for thin engine oils. Thin oils frequently cause imperfect or over-lubrication—and it is over-lubrication with incomplete combustion, that produces carbon deposits in cylinders.

Carbon deposits cause a lot of trouble which is hard to trace. You can rarely tell, without dismantling your engine, when it is carbon that is responsible for engine faults. Thus it is decidedly important that cylinders should be cleaned of carbon at regular intervals to assure maximum of efficiency with minimum of trouble.

And the most complete and thorough, while least expensive method for doing this is by use of a

Cox Oxygen Carbon Remover

No taking down engine! No half-finished scraping of cylinders and pistons! No tieing up the car for a day or more!

The work is done quickly—within 6 to 10 minutes per cylinder. It is done completely. The oxygen removes the carbon, to the smallest detail and from every nook and corner—even to the pores of the metal.

Taxicab, Motor Truck and Large Private Owners will find this a means of not only saving money, but also of easily and constantly keeping the cylinders of their cars in excellent condition. For them, one Cox Oxygen Carbon Remover will pay for itself many times over.

GARAGE OWNERS can make it pay a handsome dividend—while doing the work for their customers in much less time and with far better results. Owners can afford and will have you clean their engine cylinders frequently when they know it costs little, takes only a short time and will do the work right. *The Cox Oxygen Carbon Remover has paid for itself twice over in one week—and can do the same for you!*

Send for full information.

Outfit complete (without tank) only $25.00.

1790 Broadway, New York

Something New:—THE "NYCO" Accelerator and Power Adder

FOR FORD CARS Proves a revelation on any Model "T" Ford car and will give a great increase in speed, a marked saving in gasolene, and a perfectly cool motor at all times. Prevents the formation of carbon in the cylinders and spark plugs, and gives to the Ford a smoothness and quick acceleration hitherto unknown.

Installed between the carburettor and inlet manifold without drilling or tapping in fifteen minutes.

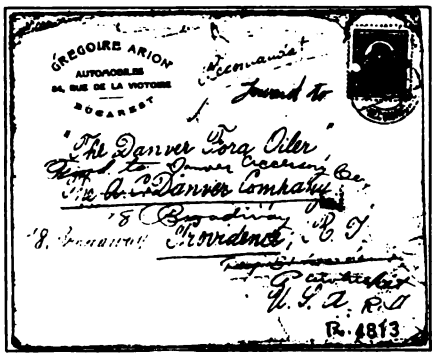
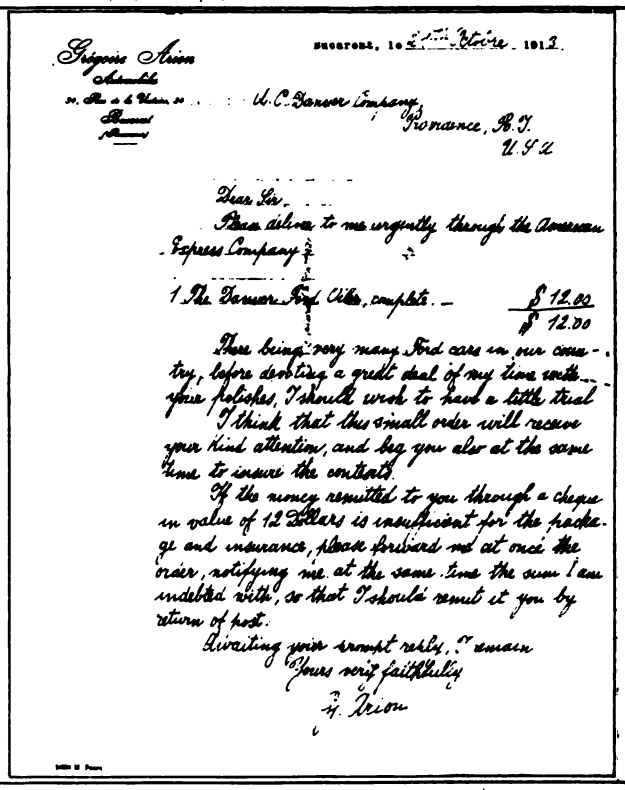
A Certain Producer Because It Reaches the Men That Constitute Your Market





DANVER ACCESSORY CO.

Maker of Ford Specialties

Factory and Office,
18 Broadway

Pawtucket, R. I., Nov. 20, 1913.

Gentlemen:---I am enclosing a letter which came to hand several days ago as well as draft that was enclosed.

We know you will be pleased to note the correspondence, also to learn that page taken from the Accessory and Garage Journal was attached to this letter. Our copy appeared in your magazine before we moved to our new factory and the issue was several months old.

It is needless to say that we are much pleased with the results obtained through the use of your medium and while we receive many queries from all sources, it is noticeable that practically all replies from our advertising in the Accessory and Garage Journal either contain money or orders.

Demands for our lines have constantly increased and our output, until increased manufacturing facilities are obtained, is taken care of. Just as soon as our production permits, you can count on the Danver Accessory Company as one of your best patrons.

Kindly return letter and check at your early convenience.

Yours very truly,
Danver Accessory Co.
C. A. Danver, Treas.

Why It Pays to Advertise and Give Service to Patrons

H. C. KROMER

Locksmith and Bell Hanger

412 FEDERAL STREET

Camden, N. J., Nov. 20, 1913

Automobile Journal
Pawtucket, R. I.

Dear Sirs:---

When a firm---one of your advertisers---does a thing promptly, I think it no more than right it should be told. When I received your last Journal I was in need of a chain. I wrote to Mr. F. Shirley Boyd, who sent the letter to the Baldwin Chain and Manufacturing Company. They sent me a couple of links to see if it would answer, and on *Nov.* '8 I sent the Baldwin Chain and Manufacturing Company an order with my check enclosed and on *Nov. 12* I had the chain on the machine. I had been trying to get a chain in Philadelphia, but not a dealer had any that would fit the sprocket—all would ride off. The Baldwin fits exactly, showing their measurements must be accurate.

Yours truly, H. C. KROMER.

PANHARD OIL

Dealers: Think This Over!

The prestige of Panhard Oil for the lubrication of all types of gas-engines, is not merely the result of a loud noise in the advertising columns of trade papers and general magazines. It is due to real quality.

Panhard Oil was first sold in 1904, when automobiles were a novelty. It took its place at once as the best for the purpose. While other brands have come and gone, Panhard has more than held its own; always the same, always the best.

No oil is "fool proof". Panhard is as nearly so as oil can be made. It is first of all a lubricant. It will help the cars you sell and the jobs you repair to make good and satisfy your customers. This is your main object.

Think this over now, while you are making your plans for the New Year. In addition we help you advertise Panhard Oil among your own trade, where it will do you the most good. Write now for details, or see us at the New York Show.

TEXACO
MOTOR OIL
THE TEXAS COMPANY

Intensive Sales Helps

EVERY DEALER who handles Texaco Motor Oil knows that he doesn't have to "go it alone". He knows, by actual experience, that Texaco advertising and Texaco dealer service are two very real and helpful factors in the sale of motor oil. Texaco advertising has created an unusually broad and consistent demand for Texaco Motor Oil. The Texaco Sign tells the car owner where he can get it.

TEXACO
MOTOR OIL

once used becomes its own salesman. The car owner who tries it at once sees and feels its effect both on car and pocketbook. It speeds the former up. It helps to keep the latter full—by reducing expenses.

Texaco Motor Oil meets every demand that man or car can put upon it. It will not form a hard carbon crust, has a zero cold test, insures perfect lubrication.

If you are not carrying Texaco write us for prices and delivery facilities. Address:

MAY WE SEND YOU ONE OF THESE BOOKLETS "Safe Within the Grip of MULTIBESTOS"?

It is a booklet that every user of automobile brakes should read and it will be particularly interesting to the man who is engaged in the repair or supply business.

In this booklet we tell something of the story of Multibestos—of the way it is manufactured—of why we consider it to be the best brake lining made.

But the beauty of the booklet is that it is not merely a collection of bald statements of our own opinion; it gives the statements of numerous enthusiastic "car-wise" men who insist that Multibestos be used on their brakes—and they give their reasons for so insisting.

Then there is the report of a test made by one of the best known engineers in the industry in which he shows a picture of the five leading brake linings after they have all been through the same trial.

Yes, there are many things in this little booklet that are bound to interest you. Tear off the coupon in the corner and mail it to us—it will pay you.

THE ACCESSORY AND GARAGE JOURNAL

Devoted Exclusively to the Automobile Trade and Allied Interests

VOL. III. PAWTUCKET, R. I., DECEMBER, 1913. No. 8

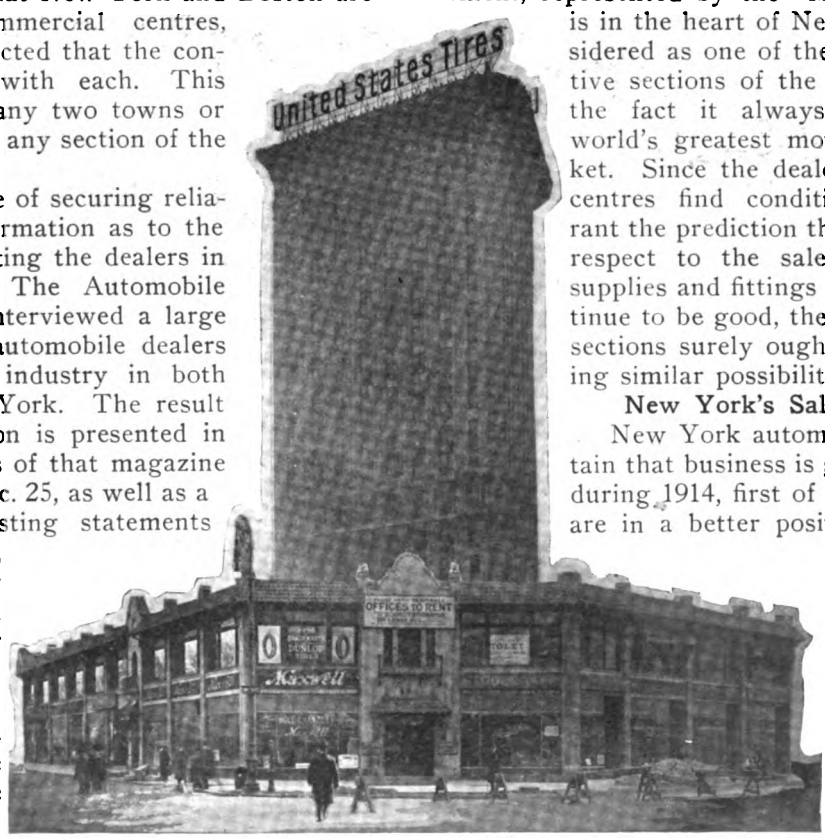
BUSINESS SITUATION IN EASTERN CENTRES.

Some of the Reasons Why Dealers in New York and Boston Feel Optimistic Concerning the Immediate Future---Conditions Which Have Engaged Their Special Attention---How the Different Problems Are Being Met.

ASIDE from the effect which they may have upon the opportunities for business in the immediate future, the exact conditions which must be met in any large centre will prove of decided interest to those in the trade. It will be assumed that New York and Boston are representative commercial centres, and it will be expected that the conditions will vary with each. This would be true of any two towns or cities in practically any section of the country.

For the purpose of securing reliable, first hand information as to the conditions confronting the dealers in these two cities, The Automobile Journal recently interviewed a large number of retail automobile dealers and others in the industry in both Boston and New York. The result of this investigation is presented in detail in the issues of that magazine for Nov. 25 and Dec. 25, as well as a number of interesting statements from the dealers, expressing their full confidence in the possibilities for excellent business during 1914.

The uniform optimism of those engaged in the sale of pleasure and commercial cars, accessories, supplies and fittings in these two cities is of timely interest to others in the trade. New York is regarded by many as being in a position to reflect, at least in a measure, the influence of Wall street upon the business of the country, no matter what the line, and it must be admitted that some of the dealers in that city have opportunity to come in close touch with those who help to make up the so-called financial element, represented by the "Market". Boston is in the heart of New England, considered as one of the most conservative sections of the country, despite the fact it always has been the world's greatest motor vehicle market. Since the dealers in these two centres find conditions which warrant the prediction that business with respect to the sale of automobiles, supplies and fittings is and must continue to be good, the dealers in other sections surely ought also to be facing similar possibilities.



Group of Car Agencies at Broadway and 59th Street, and the United States Rubber Building—The Heart of New York City's Automobile District.

New York's Sales Methods.

New York automobile men maintain that business is going to be good during 1914, first of all, because they are in a better position to take advantage of the opportunities that will be afforded. In amplification of this statement, it may be explained that many of the dealers along Automobile Row, which extends from 46th to 63rd streets, on Broadway, have been engaged during the past year in a reorganization of their sales methods. This has been deemed nec-

Digitized by Google

essary by reason of the fact that, although the business done during the previous year was of such volume as to indicate a large profit, investigation of the situation at the end of a given period revealed a loss instead.

Adopting Systematic Methods.

It has been the custom in that city to pay the salesmen a stated salary, plus a commission on each sale, this commission being based upon the amount of cash received. Having become convinced that efficiency in salesmanship was capable of being measured, several of the dealers, each working independently, resolved to adopt systematic methods of determining the value of each salesman, with somewhat surprising results. In one instance, which will serve to illustrate the point, it was found that the salesman with the best showing with respect to number of sales during a given period had cost the firm some $750 in losses on those sales, while the man who had sold the fewest cars had netted a profit to his employers that amounted to nearly as much. which outweighs the salesman's better judgment which accounts for the grand total of losses against the outwardly appearing good record of the individual. In order to overcome this particular feature, the plan most generally in vogue today among those who still continue to trade, is that of asking the superintendent of the service department to place a valuation on the used car offered for sale and limiting the salesman to that figure. Of course there are men in New York, as there are in other cities, who do not strictly adhere to this rule, although professing to do so, but there are few who do not appreciate that a definite course with respect to this problem is necessary if the business is to be established on a permanent and stable basis.
